Sets Functions Probability:

An Introduction to Random Sets Hung T. Nguyen, 2006-03-27 The study of random sets is a large and rapidly growing area with connections to many areas of mathematics and applications in widely varying disciplines from economics and decision theory to biostatistics and image analysis The drawback to such diversity is that the research reports are scattered throughout the literature with the result that i

Computational Methods in Economic Dynamics Herbert Dawid, Willi Semmler, 2011-03-23 This volume is centered around the issue of market design and resulting market dynamics The economic crisis of 2007 2009 has once again highlighted the importance of a proper design of market protocols and institutional details for economic dynamics and macroeconomics Papers in this volume capture institutional details of particular markets behavioral details of agents decision making as well as spillovers between markets and effects to the macroeconomy Computational methods are used to replicate and understand market dynamics emerging from interaction of heterogeneous agents and to develop models that have predictive power for complex market dynamics Finally treatments of overlapping generations models and differential games with heterogeneous actors are provided

Smoothing of Multivariate Data Jussi Sakari Klemelä, 2009-09-04 An applied treatment of the key methods and state of the art tools for visualizing and understanding statistical data Smoothing of Multivariate Data provides an illustrative and hands on approach to the multivariate aspects of density estimation emphasizing the use of visualization tools Rather than outlining the theoretical concepts of classification and regression this book focuses on the procedures for estimating a multivariate distribution via smoothing The author first provides an introduction to various visualization tools that can be used to construct representations of multivariate functions sets data and scales of multivariate density estimates Next readers are presented with an extensive review of the basic mathematical tools that are needed to asymptotically analyze the behavior of multivariate density estimators with coverage of density classes lower bounds empirical processes and manipulation of density estimates The book concludes with an extensive toolbox of multivariate density estimators including anisotropic kernel estimators minimization estimators multivariate adaptive histograms and wavelet estimators A completely interactive experience is encouraged as all examples and figures can be easily replicated using the R software package and every chapter concludes with numerous exercises that allow readers to test their understanding of the presented techniques The R software is freely available on the book's related Web site along with Code sections for each chapter that provide short instructions for working in the R environment Combining mathematical analysis with practical implementations Smoothing of Multivariate Data is an excellent book for courses in multivariate analysis data analysis and nonparametric statistics at the upper undergraduate and graduate levels It also serves as a valuable reference for practitioners and researchers in the fields of statistics computer science economics and engineering

An Introduction to Statistical Signal Processing Robert M. Gray, Lee D. Davisson, 2004-12-02 This book describes the

essential tools and techniques of statistical signal processing At every stage theoretical ideas are linked to specific applications in communications and signal processing using a range of carefully chosen examples The book begins with a development of basic probability random objects expectation and second order moment theory followed by a wide variety of examples of the most popular random process models and their basic uses and properties Specific applications to the analysis of random signals and systems for communicating estimating detecting modulating and other processing of signals are interspersed throughout the book Hundreds of homework problems are included and the book is ideal for graduate students of electrical engineering and applied mathematics It is also a useful reference for researchers in signal processing and communications

Modeling Dependence in Econometrics Van-Nam Huynh,Vladik Kreinovich,Songsak

Sriboonchitta,2013-11-18 In economics many quantities are related to each other Such economic relations are often much more complex than relations in science and engineering where some quantities are independence and the relation between others can be well approximated by linear functions As a result of this complexity when we apply traditional statistical techniques developed for science and engineering to process economic data the inadequate treatment of dependence leads to misleading models and erroneous predictions Some economists even blamed such inadequate treatment of dependence for the 2008 financial crisis To make economic models more adequate we need more accurate techniques for describing dependence Such techniques are currently being developed This book contains description of state of the art techniques for modeling dependence and economic applications of these techniques Most of these research developments are centered around the notion of a copula a general way of describing dependence in probability theory and statistics To be even more adequate many papers go beyond traditional copula techniques and take into account e g the dynamical changing character of the dependence in economics

Foundations of Fuzzy Logic and Soft Computing Patricia Melin,Oscar Castillo,Luis T.

Aguilar,Witold Pedrycz,2007-07-02 This book comprises a selection of papers from IFSA 2007 on new methods and theories that contribute to the foundations of fuzzy logic and soft computing These papers were selected from over 400 submissions and constitute an important contribution to the theory and applications of fuzzy logic and soft computing methodologies Soft computing consists of several computing paradigms including fuzzy logic neural networks genetic algorithms and other techniques which can be used to produce powerful intelligent systems for solving real world problems The papers of IFSA 2007 also make a contribution to this goal This book is intended to be a major reference for scientists and engineers interested in applying new computational and mathematical tools to achieve intelligent solutions to complex problems We consider that this book can also be used to get novel ideas for new lines of research or to continue the lines of research proposed by the authors of the papers contained in the book The book is divided into 14 main parts Each part contains a set of papers on a common subject so that the reader can find similar papers grouped together Some of these parts comprise the papers of organized sessions of IFSA 2007 and we thank the session organizers for their incredible job in forming these

sessions with invited and regular paper submissions

Partial Identification in Econometrics and Related Topics

Nguyen Ngoc Thach, Nguyen Duc Trung, Doan Thanh Ha, Vladik Kreinovich, 2024-07-31 This book covers data processing techniques with economic and financial application being the unifying theme To make proper investments in economy the authors need to have a good understanding of the future trends how will demand change how will prices change etc In general in science the usual way to make predictions is to identify a model that best fits the current dynamics and to use this model to predict the future behavior In many practical situations especially in economics our past experiences are limited As a result the authors can only achieve a partial identification It is therefore important to be able to make predictions based on such partially identified models which is the main focus of this book This book emphasizes partial identification techniques but it also describes and uses other econometric techniques ranging from more traditional statistical techniques to more innovative ones such as game theoretic approach interval techniques and machine learning Applications range from general analysis of GDP growth stock market and consumer prices to analysis of specific sectors of economics credit and banking energy health labor tourism international trade to specific issues affecting economy such as ecology national culture government regulations and the existence of shadow economy This book shows what has been achieved but even more important are remaining open problems The authors hope that this book will inspire practitioners to learn how to apply state of the art techniques especially techniques of optimal transport statistics to economic and financial problems and inspire researchers to further improve the existing techniques and to come up with new techniques for studying economic and financial phenomena The authors want to thank all the authors for their contributions and all anonymous referees for their thorough analysis and helpful comments The publication of this book and organization of the conference at which these papers were presented was supported by the Ho Chi Minh University of Banking HUB Vietnam and by the Vingroup Innovation Foundation VINIF The authors thank the leadership and staff of HUB and VINIF for providing crucial support

Mathematical Statistics for Economics and Business Ron C. New Statistical Procedures for the Social Sciences

Rand R. Wilcox, 2013-05-13 This unique volume

addresses the inadequacies of basic statistical methods that standard textbooks tend to ignore The author introduces new procedures with accompanying tables that illustrate the practicality of the methods Concentrating on basic experimental designs that are central to research in the social sciences Wilcox describes new nonparametric techniques two way ANOVA designs and new results related to the analysis of covariance and repeated measure design This book serves as the ideal reference and supplement to standard texts by making the statistical advances of the last thirty years accessible to graduate students and researchers
