

Tableau Groups VS Sets

The difference between Tableau's Groups and Tableau Sets was something that confused me a little when first started with Tableau. Tableau groups seem pretty self-explanatory, but sets seemed a little complicated. Grouping in Tableau is grouping multiple members/values into several groups which will create a higher category of the dimension. Creating a set in Tableau is putting multiple values IN my a single set depending on a condition or by manually picking them. In a set you have two options, you are either in my set or out my set.

Tableau Group vs Set [What's the Difference between Tableau's Sets and Groups?]

<https://www.youtube.com/watch?v=a3SQPIHyofY>

We are going to start with a basic group. I am working with the Sample – Superstore data that comes with Tableau so you can follow along with me. First thing I am going to do is bring Sub-Category over so I can see what all the Sub-Categories are in the data. Now in this data, there is already a higher grouping of this field called Category but we going to act like this does not exist. Now that we have all the values out there let's go ahead and hold CTRL and select all the values we want to be in the first group. In this first group, I want to group the values Bookcases, Chairs, Furnishings and Tables. Once all of them are highlighted hover over one of the selected values and click on the paperclip that shows up in the dialog box.

Steven Howard Weintraub

Sets Groups:

Introduction To Abstract Algebra, An: Sets, Groups, Rings, And Fields Steven Howard Weintraub, 2022-05-25 This book is a textbook for a semester long or year long introductory course in abstract algebra at the upper undergraduate or beginning graduate level It treats set theory group theory ring and ideal theory and field theory including Galois theory and culminates with a treatment of Dedekind rings including rings of algebraic integers In addition to treating standard topics it contains material not often dealt with in books at this level It provides a fresh perspective on the subjects it covers with in particular distinctive treatments of factorization theory in integral domains and of Galois theory As an introduction it presupposes no prior knowledge of abstract algebra but provides a well motivated clear and rigorous treatment of the subject illustrated by many examples Written with an eye toward number theory it contains numerous applications to number theory including proofs of Fermat's theorem on sums of two squares and of the Law of Quadratic Reciprocity and serves as an excellent basis for further study in algebra in general and number theory in particular Each of its chapters concludes with a variety of exercises ranging from the straightforward to the challenging in order to reinforce students knowledge of the subject Some of these are particular examples that illustrate the theory while others are general results that develop the theory further

Sets, Groups, and Mappings: An Introduction to Abstract Mathematics Andrew D. Hwang, 2019-09-26 This book introduces students to the world of advanced mathematics using algebraic structures as a unifying theme Having no prerequisites beyond precalculus and an interest in abstract reasoning the book is suitable for students of math education computer science or physics who are looking for an easy going entry into discrete mathematics induction and recursion groups and symmetry and plane geometry In its presentation the book takes special care to forge linguistic and conceptual links between formal precision and underlying intuition tending toward the concrete but continually aiming to extend students comfort with abstraction experimentation and non trivial computation The main part of the book can be used as the basis for a transition to proofs course that balances theory with examples logical care with intuitive plausibility and has sufficient informality to be accessible to students with disparate backgrounds For students and instructors who wish to go further the book also explores the Sylow theorems classification of finitely generated Abelian groups and discrete groups of Euclidean plane transformations

Groups, Difference Sets, and the Monster K.T. Arasu, J.F. Dillon, K. Harada, S. Sehgal, R. Solomon, 2011-06-24 This series is devoted to the publication of monographs lecture resp seminar notes and other materials arising from programs of the OSU Mathematical Research Institute This includes proceedings of conferences or workshops held at the Institute and other mathematical writings

Interpolation and Sidon Sets for Compact Groups Colin Graham, Kathryn E. Hare, 2013-01-04 Understanding special sets of integers was classically of interest to Hadamard Zygmund and others and continues to be of interest today This book is a modern treatment of the subject of interpolation and Sidon sets It is a unique book aimed at both new and experienced researchers In particular this

is the only book in English which features a complete treatment of the Pisier Bourgain results on Sidon sets many of which were originally in French in hard to access publications Applications of the P B results due to Pisier Bourgain Ramsey and the authors are included The book introduces the reader to a wealth of methods important in mathematics today topological probabilistic algebraic combinatoric and analytic It prepares students to perform research in the area and provides both exercises and open problems The book also provides direction to the literature for topics it does not fully cover The book is self contained with appendices covering results that are required but not necessarily in the pre requisite background of a student ready to choose an area for research in harmonic analysis *Abelian Groups and Representations of Finite Partially Ordered Sets* David Arnold, 2012-11-14

A recurring theme in a traditional introductory graduate algebra course is the existence and consequences of relationships between different algebraic structures This is also the theme of this book an exposition of connections between representations of finite partially ordered sets and abelian groups Emphasis is placed throughout on classification a description of the objects up to isomorphism and computation of representation type a measure of when classification is feasible David M Arnold is the Ralph and Jean Storm Professor of Mathematics at Baylor University He is the author of *Finite Rank Torsion Free Abelian Groups and Rings* published in the Springer Verlag Lecture Notes in Mathematics series a co editor for two volumes of conference proceedings and the author of numerous articles in mathematical research journals His research interests are in abelian group theory and related topics such as representations of partially ordered sets and modules over discrete valuation rings subrings of algebraic number fields and pullback rings He received his Ph D from the University of Illinois Urbana and was a member of the faculty at New Mexico State University for many years [An Introduction to Matrices, Sets and Groups for Science Students](#) G. Stephenson, 2016-01-14

This outstanding text offers undergraduate students of physics chemistry and engineering a concise readable introduction to matrices sets and groups Concentrating mainly on matrix theory the book is virtually self contained requiring a minimum of mathematical knowledge and providing all the background necessary to develop a thorough comprehension of the subject Beginning with a chapter on sets mappings and transformations the treatment advances to considerations of matrix algebra inverse and related matrices and systems of linear algebraic equations Additional topics include eigenvalues and eigenvectors diagonalisation and functions of matrices and group theory Each chapter contains a selection of worked examples and many problems with answers enabling readers to test their understanding and ability to apply concepts

Transformation Groups And Invariant Measures: Set-theoretical Aspects Alexander B Kharazishvili, 1998-10-05 This book is devoted to some topics of the general theory of invariant and quasi invariant measures Such measures are usually defined on various algebras of subsets of spaces equipped with transformation groups and there are close relationships between purely algebraic properties of these groups and the corresponding properties of invariant quasi invariant measures The main goal of the book is to investigate several aspects of those relationships primarily from the set theoretical point of view Also of

interest are the properties of some natural classes of sets important from the viewpoint of the theory of invariant quasi invariant measures **The Descriptive Set Theory of Polish Group Actions** Howard Becker,A. S. Kechris,1996-12-05 In this book the authors present their research into the foundations of the theory of Polish groups and the associated orbit equivalence relations The particular case of locally compact groups has long been studied in many areas of mathematics Non locally compact Polish groups occur naturally as groups of symmetries in such areas as logic especially model theory ergodic theory group representations and operator algebras Some of the topics covered here are topological realizations of Borel measurable actions universal actions applications to invariant measures actions of the infinite symmetric group in connection with model theory logic actions dichotomies for orbit spaces including Silver Glimm Effros type dichotomies and the topological Vaught conjecture descriptive complexity of orbit equivalence relations definable cardinality of orbit spaces

Neutrosophic Triplet Group Based on Set Valued Neutrosophic Quadruple Numbers Memet Şahin,Abdullah Kargın, Smarandache introduced neutrosophic quadruple sets and neutrosophic quadruple numbers 45 in 2015 These sets and numbers are real or complex number valued In this study we firstly introduce set valued neutrosophic quadruple sets and numbers We give some known and special operations for set valued neutrosophic quadruple numbers **Algorithm for Neutrosophic Soft Sets in Stochastic Multi-Criteria Group Decision Making Based on Prospect Theory** Yuanxiang Dong ,Chenjing Hou ,Yuchen Pan,Ke Gong, To address issues involving inconsistencies this paper proposes a stochastic multi criteria group decision making algorithm based on neutrosophic soft sets which includes a pair of asymmetric functions Truth membership and false membership and an indeterminacy membership function For integrating an inherent stochastic the algorithm expresses the weights of decision makers and parameter subjective weights by neutrosophic numbers instead of determinate values Additionally the algorithm is guided by the prospect theory which incorporates psychological expectations of decision makers into decision making To construct the prospect decision matrix this research establishes a conflict degree measure of neutrosophic numbers and improves it to accommodate the stochastic multi criteria group decision making Moreover we introduce the weighted average aggregation rule and weighted geometric aggregation rule of neutrosophic soft sets Later this study presents an algorithm for neutrosophic soft sets in the stochastic multi criteria group decision making based on the prospect theory Finally we perform an illustrative example and a comparative analysis to prove the effectiveness and feasibility of the proposed algorithm
