Several Complex Variables and the Geometry of Real Hypersurfaces John P. D'Angelo, 2019-07-16 Several Complex Variables and the Geometry of Real Hypersurfaces covers a wide range of information from basic facts about holomorphic functions of several complex variables through deep results such as subelliptic estimates for the Neumann problem on pseudoconvex domains with a real analytic boundary The book focuses on describing the geometry of a real hypersurface in a complex vector space by understanding its relationship with ambient complex analytic varieties You will learn how to decide whether a real hypersurface contains complex varieties how closely such varieties can contact the hypersurface and why it is important The book concludes with two sets of problems routine problems and difficult problems many of which are unsolved Principal prerequisites for using this book include a thorough understanding of advanced calculus and standard knowledge of complex analysis in one variable Several Complex Variables and the Geometry of Real Hypersurfaces will be a useful text for advanced graduate students and professionals working in complex analysis

Holomorphic Morse Inequalities and Bergman Kernels Xiaonan Ma, George Marinescu, 2007-12-14 This book examines holomorphic Morse inequalities and the asymptotic expansion of the Bergman kernel on manifolds by using the heat kernel It opens perspectives on several active areas of research in complex Kähler and symplectic geometry A large number of applications are also included such as an analytic proof of Kodaira's embedding theorem a solution of the Grauert Riemenschneider and Shiffman conjectures compactification of complete Kähler manifolds of pinched negative curvature Berezin Toeplitz quantization weak Lefschetz theorems and asymptotics of the Ray-Singer analytic torsion

Complex Analysis and Dynamical Systems Mark L'vovich Agranovskii, 2004 This book contains contributions from the participants of an International Conference on Complex Analysis and Dynamical Systems The papers collected here are devoted to various topics in complex analysis and dynamical systems ranging from properties of holomorphic mappings to attractors in hyperbolic spaces Overall these selections provide an overview of activity in analysis at the outset of the twenty-first century The book is suitable for graduate students and researchers in complex analysis and related problems of dynamics With this volume the Israel Mathematical Conference Proceedings are now published as a subseries of the AMS Contemporary Mathematics series

L2 Approaches in Several Complex Variables Takeo Ohsawa, 2018-11-28 This monograph presents the current status of a rapidly developing part of several complex variables motivated by the applicability of effective results to algebraic geometry and differential geometry Special emphasis is put on the new precise results on the L^2 extension of holomorphic functions in the past 5 years In Chapter 1 the classical questions of several complex variables motivating the development of this field are reviewed after necessary preparations from the basic notions of those variables and of complex manifolds such as holomorphic functions pseudoconvexity differential forms and cohomology In Chapter 2 the L^2 method of solving the $\bar{\partial}$ equation is presented emphasizing its differential geometric aspect In Chapter 3 a refinement of the Oka-Cartan theory is given by this method The

L² extension theorem with an optimal constant is included obtained recently by Z Bocklandt and separately by Q A Guan and X Y Zhou In Chapter 4 various results on the Bergman kernel are presented including recent works of Maitani Yamaguchi Berndtsson Guan Zhou and Berndtsson Lempert Most of these results are obtained by the L² method In the last chapter rather specific results are discussed on the existence and classification of certain holomorphic foliations and Levi flat hypersurfaces as their stable sets These are also applications of the L² method obtained during the past 15 years

Positivity in Algebraic Geometry II R.K. Lazarsfeld, 2017-07-25 This two volume work on Positivity in Algebraic Geometry contains a contemporary account of a body of work in complex algebraic geometry loosely centered around the theme of positivity Topics in Volume I include ample line bundles and linear series on a projective variety the classical theorems of Lefschetz and Bertini and their modern outgrowths vanishing theorems and local positivity Volume II begins with a survey of positivity for vector bundles and moves on to a systematic development of the theory of multiplier ideals and their applications A good deal of this material has not previously appeared in book form and substantial parts are worked out here in detail for the first time At least a third of the book is devoted to concrete examples applications and pointers to further developments Whereas Volume I is more elementary the present Volume II is more at the research level and somewhat more specialized Both volumes are also available as hardcover editions as Vols 48 and 49 in the series *Ergebnisse der Mathematik und ihrer Grenzgebiete*

Topics in Several Complex Variables Zair Ibragimov, Norman Levenberg, Sergey Pinchuk, Azimbay Sadullaev, 2016-04-21 This volume contains the proceedings of the Special Session on Several Complex Variables which was held during the first USA Uzbekistan Conference on Analysis and Mathematical Physics from May 20-23 2014 at California State University Fullerton This volume covers a wide variety of topics in pluripotential theory symplectic geometry and almost complex structures integral formulas holomorphic extension and complex dynamics In particular the reader will find articles on Lagrangian submanifolds and rational convexity multidimensional residues S-parabolic Stein manifolds Segre varieties and the theory of quasianalytic functions

The Madison Symposium on Complex Analysis Edgar Lee Stout, 1992 This volume contains the proceedings of a Symposium on Complex Analysis held at the University of Wisconsin at Madison in June 1991 on the occasion of the retirement of Walter Rudin During the week of the conference a group of about two hundred mathematicians from many nations gathered to discuss recent developments in complex analysis and to celebrate Rudin's long and productive career Among the main subjects covered are applications of complex analysis to operator theory polynomial convexity holomorphic mappings boundary behaviour of holomorphic functions function theory on the unit disk and ball and some aspects of the theory of partial differential equations related to complex analysis Containing papers by some of the world's leading experts in these subjects this book reports on current directions in complex analysis and presents an excellent mixture of the analytic and geometric aspects of the theory

Positivity in Algebraic Geometry I R.K. Lazarsfeld, 2004-08-24 This two volume work on Positivity in Algebraic Geometry contains a contemporary account of a

body of work in complex algebraic geometry loosely centered around the theme of positivity Topics in Volume I include ample line bundles and linear series on a projective variety the classical theorems of Lefschetz and Bertini and their modern outgrowths vanishing theorems and local positivity Volume II begins with a survey of positivity for vector bundles and moves on to a systematic development of the theory of multiplier ideals and their applications A good deal of this material has not previously appeared in book form and substantial parts are worked out here in detail for the first time At least a third of the book is devoted to concrete examples applications and pointers to further developments Volume I is more elementary than Volume II and for the most part it can be read without access to Volume II *Perspectives of Complex Analysis, Differential Geometry, and Mathematical Physics* Stancho Dimiev, Kouei Sekigawa, 2001 This workshop brought together specialists in complex analysis differential geometry mathematical physics and applications for stimulating cross disciplinary discussions The lectures presented ranged over various current topics in those fields The proceedings will be of value to graduate students and researchers in complex analysis differential geometry and theoretical physics and also related fields

Introduction to Complex Theory of Differential Equations Anton Savin, Boris Sternin, 2017-03-28 This book discusses the complex theory of differential equations or more precisely the theory of differential equations on complex analytic manifolds Although the theory of differential equations on real manifolds is well known it is described in thousands of papers and its usefulness requires no comments or explanations to date specialists on differential equations have not focused on the complex theory of partial differential equations However as well as being remarkably beautiful this theory can be used to solve a number of problems in real theory for instance the Poincaré balayage problem and the mother body problem in geophysics The monograph does not require readers to be familiar with advanced notions in complex analysis differential equations or topology With its numerous examples and exercises it appeals to advanced undergraduate and graduate students and also to researchers wanting to familiarize themselves with the subject
