The Visioneers W. Patrick McCray, 2012-12-09 The story of the visionary scientists who invented the future In 1969 Princeton physicist Gerard O'Neill began looking outward to space colonies as the new frontier for humanity's expansion A decade later Eric Drexler an MIT trained engineer turned his attention to the molecular world as the place where society's future needs could be met using self-replicating nanoscale machines These modern utopians predicted that their technologies could transform society as humans mastered the ability to create new worlds undertook atomic scale engineering and if truly successful overcame their own biological limits The Visioneers tells the story of how these scientists and the communities they fostered imagined designed and popularized speculative technologies such as space colonies and nanotechnologies Patrick McCray traces how these visioneers blended countercultural ideals with hard science entrepreneurship libertarianism and unbridled optimism about the future He shows how they built networks that communicated their ideas to writers politicians and corporate leaders But the visioneers were not immune to failure or to the lures of profit celebrity and hype O'Neill and Drexler faced difficulty funding their work and overcoming colleagues' skepticism and saw their ideas co-opted and transformed by Timothy Leary the scriptwriters of Star Trek and many others Ultimately both men struggled to overcome stigma and ostracism as they tried to unshackle their visioneering from pejorative labels like fringe and pseudoscience The Visioneers provides a balanced look at the successes and pitfalls they encountered The book exposes the dangers of promotion oversimplification misuse and misunderstanding that can plague exploratory science But above all it highlights the importance of radical new ideas that inspire us to support cutting edge research into tomorrow's technologies

Time of Our Lives Tom Kirkwood,2001-01-11 By the year 2050 one in five of the world s population will be 65 or older a fact which presages profound medical biological philosophical and political changes in the coming century In *Time of Our Lives* Tom Kirkwood draws on more than twenty years of research to make sense of the evolution of aging to explain how aging occurs and to answer fundamental questions like why women live longer than men He shows that we age because our genes evolving at a time when life was nasty brutish and short placed little priority on the long term maintenance of our bodies With such knowledge along with new insights from genome research we can devise ways to target the root causes of aging and of age related diseases such as Alzheimer s and osteoporosis He even considers the possibility that human beings will someday have greatly extended life spans or even be free from senescence altogether Beautifully written by one of the world s pioneering researchers into the science of aging *Time of Our Lives* is a clear original and above all inspiring investigation of a process all of us experience but few of us understand

Liberation Biology Ronald Bailey,2013-08 The 21st century will undoubtedly witness unprecedented advances in understanding the mechanisms of the human body and in developing biotechnology With the mapping of the human genome the pace of discovery is now on the fast track By the middle of the century we can expect that the rapid progress in biology and biotechnology will utterly transform human life What was once the stuff of science fiction may now be within reach in the not too distant future 20 to 40 year leaps in average life spans enhanced human bodies drugs and therapies to boost memory and speed up mental processing and a genetic science that allows parents to ensure that their children will have stronger immune systems more athletic bodies and cleverer brains Even the prospect of human immortality beckons Such scenarios excite many people and frighten or appall many others Already biotechnology opponents are organizing political movements aimed at restricting scientific research banning the development and commercialization of various products and technologies and limiting citizens access to the fruits of the biotech revolution In this forward looking book Ronald Bailey science writer for Reason magazine argues that the coming biotechnology revolution far from endangering human dignity will liberate human beings to achieve their full potentials by enabling more of us to live flourishing lives free of disease disability and the threat of early death Bailey covers the full range of the coming biotechnology breakthroughs from stem cell research to third world farming from brain enhancing neuropharmaceuticals to designer babies Against critics of these trends who forecast the nightmare society of Huxley s *Brave New World* Bailey persuasively shows in lucid and well argued prose that the health safety and

ethical concerns raised by worried citizens and policymakers are misplaced Liberation Biology makes a positive optimistic and convincing case that the biotechnology revolution will improve our lives and the future of our children while preserving and enhancing the natural environment The Science and Technology of Growing Young, Updated Edition Sergey Young, 2024-09-24 Wall Street Journal USA Today and Publishers Weekly bestseller 2021 Nautilus Book Award Silver Medal Winner Aging Consciously Category The prospect of living to 200 years old isn't science fiction anymore A leader in the emerging field of longevity offers his perspective on what cutting edge breakthroughs are on the horizon as well as the practical steps we can take now to live healthily to 100 and beyond In The Science and Technology of Growing Young industry investor and insider Sergey Young demystifies the longevity landscape cutting through the hype and showing readers what they can do now to live better for longer and offering a look into the exciting possibilities that await us By viewing aging as a condition that can be cured we can dramatically revolutionize the field of longevity and make it accessible for everyone Join Sergey as he gathers insights from world leading health entrepreneurs scientists doctors and inventors providing a comprehensive look into the future of longevity in two horizons The Near Horizon of Longevity identifies the technological developments that will allow us to live to 150 some of which are already in use from AI based diagnostics to gene editing and organ regeneration The Far Horizon of Longevity offers a tour of the future of age reversal and the exciting technologies that will allow us to live healthily to 200 from Internet of Bodies to digital avatars to AI brain integration In a bonus chapter Sergey also showcases 10 longevity choices that we already know and can easily implement to live to 100 distilling the science behind diet exercise sleep mental health and our environments into attainable habits and lifestyle hacks that anyone can adopt to vastly improve their lives and workplaces Combining practical advice with an incredible overview of the brave new world to come The Science and Technology of Growing Young redefines what it means to be human and to grow young
