Groupware: Design, Implementation, and Use Jörg M. Haake, Jose A. Pino, 2002-08-14 Welcome to the 8th International Workshop on Groupware CRIWG 2002 The previous workshops took place in Lisbon Portugal 1995 Puerto Varas Chile 1996 El Escorial Spain 1997 B zios Brazil 1998 Cancun Mexico 1999 Madeira Portugal 2000 and Darmstadt Germany 2001 CRIWG workshops follow a simple recipe for success good papers a small number of participants extensive time for lively and constructive discussions and a high level of cooperation both within and between paper sessions CRIWG 2002 continued this tradition CRIWG 2002 attracted 36 submissions from 13 countries nine of them outside Ibero America Each of the 36 articles submitted was reviewed by at least

three members of an internationally renowned Program Committee This year we used a double blind reviewing process i e the reviewers did not know who the authors of the papers were In addition the reviewers were chosen based on their expertise and we also ensured that they came from countries and institutions not related to those of the paper s authors This reviewer assignment worked remarkably well as indicated by the high average confidence value the reviewers gave their own reviews This means that papers were usually reviewed by experts in the paper s topic As a consequence reviews were usually quite extensive and contained many suggestions for improvements I would like to thank all the members of the Program Committee for their hard work which I am sure contributed to improving the quality of the final articles

Quality-Driven Query Answering for Integrated Information Systems Felix Naumann,2003-07-31 The Internet and the World Wide Web WWW are becoming more and more important in our highly interconnected world as more and more data and information is made available for online access Many individuals and governmental commercial cultural and scientific organizations increasingly depend on information sources that can be accessed and queried over the Web For example accessing flight schedules or retrieving stock information has become common practice in today's world When accessing this data many people assume that the information accessed is accurate and that the data source can be accessed reliably These two examples clearly demonstrate that not only the information content is important the information about the quality of the data becomes an even more crucial and critical aspect for individuals and organizations when they make plans or take decisions based on the results of their queries More precisely having access to information of known quality becomes critical for the well being and indeed for the functioning of modern industrialized societies Surprisingly despite the urgent need for clear concepts and techniques to judge and value quality and for technology to use such meta information very few scientific results are known and available Few approaches are known to use quality measures for accessing and querying information over the Web Only a limited number of products on the IT market address this burning problem

Multimedia
Information Storage and Management Soon M. Chung,1996-08-31 Multimedia information systems are quite different from traditional information systems especially in data types modeling delivery and user interface The large size of multimedia data and the high bandwidth requirement of multimedia streams require new storage buffering delivery and networking schemes The presentational nature of multimedia applications requires a proper synchronization between multimedia streams and the composition of multimedia documents in the distributed environment should overcome the heterogeneity of underlying systems This book is edited for undergraduate and graduate students studying multimedia information and applications researchers and developers of various multimedia software and hardware systems multimedia tool developers user interface designers and network protocol designers by including 17 chapters focused on the following major issues Disk scheduling and storage hierarchy Configuration of multimedia servers and buffer management Delivery scheduling for multimedia streams Supporting user interactions Document modeling and temporal modeling of multimedia

The Railway Conductor, 1909 Rightward Movement Dorothee Beermann, David LeBlanc, Henk van

Riemsdijk, 1997-12-11 Symmetries and asymmetries have always played an important role in linguistic theorizing From the early works on potentially universal properties of transformational processes differences between rightward and leftward movement processes were noted and constituted a challenge to theories of conditions on transformations The upward boundedness of extraposition rules vs the successive cyclic character of question word movement for example remains a vexing problem An idea which has gained considerable prominence in the most recent syntactic work in particular Noam Chomsky's Minimalist Program and Richard Kayne's Antisymmetry proposal is that rightward movement simply does not exist This means in essence that what looks like an element that has been moved rightward is either base generated in its surface position or it is actually moved leftward but all its surrounding materials have been moved leftward even further Clearly these radical proposals have generated a large number of new analyses of the relevant phenomena and they have fostered considerable controversy about the viability and desirability of this type of approach The present volume brings together a representative group of articles discussing a variety of aspects of apparent rightward movement processes including considerations having to do with parsing and representing the various opposing lines of thought on this matter Empirically they cover a wide array of constructions extraposition scrambling quantifier floating etc and languages American Sign Language Bengali Dutch French Frisian German Hindi Japanese Marathi etc **Enabling 6G Mobile Networks**
