Soares,Neville A. Stanton,2011-06-22 Every day we interact with thousands of consumer products We not only expect them to perform their functions safely reliably and efficiently but also to do it so

seamlessly that we don't even think about it. However, with the many factors involved in consumer product design from the application of human factors and ergonomics principles to reducing risks of malfunction and the total life cycle cost, well, the process just seems to get more complex. Edited by well-known and well-respected experts, the two volumes of *Handbook of Human Factors and Ergonomics in Consumer Product Design* simplify this process. The first volume, *Human Factors and Ergonomics in Consumer Product Design: Methods and Techniques*, outlines how to incorporate Human Factors and Ergonomics (HF/E) principles and knowledge into the design of consumer products in a variety of applications. It discusses the user-centered design process, starting with how mental workload affects every day interactions with consumer products and what lessons may be applied to product design. The book then highlights the ever-increasing role of information technology, including digital imaging, video, and other media, and virtual reality applications in consumer product design. It also explores the user-centered aspect of consumer product development, with discussions of user-centered vs. task-based approach, articulation, and assessment of user requirements and needs, interaction with design models, and eco design. With contributions from a team of researchers from 21 countries, the book covers the current state of the art methods and techniques of product ergonomics. It provides an increased knowledge of how to apply the HF/E principles that ultimately leads to better product design.
