Embodied Awareness of Space Christos Kakalis, David Boyd, 2025-01-16. This edited volume explores the notion of embodied experience through a diverse range of disciplines: architecture, music, literature, performance studies, philosophy, geopolitics. In doing so, it illuminates the need to redefine the role of the human body as one of the protagonists for raising awareness of space-time issues through processing, experimentation, and application of histories and theories of embodied awareness of space. Critically revisiting these spatio-temporal dialogues, this book suggests a method of linking theory, history, and practice past, present, and future. The authors reinstate the significance of history and theory in creative thinking and test their applicability in a number of different areas: theoretical and buildable architectural projects, mapping and geography, representation and performative arts. This volume will appeal to students and scholars from architecture, art, cultural studies, landscape studies, media studies, and other disciplines in the humanities and social sciences.

State-Space Models Yong Zeng, Shu Wu, 2013-08-15. State-space models as an important mathematical tool have been widely used in many different fields. This edited collection explores recent theoretical developments of the models and their applications in economics and finance. The book includes nonlinear and non-Gaussian time series models, regime switching, and hidden Markov models, continuous or discrete time state processes, and models of equally spaced or irregularly spaced discrete or continuous observations. The contributed chapters are divided into four parts. The first part is on Particle Filtering and Parameter Learning in Nonlinear State-Space Models. The second part focuses on the application of Linear State-Space Models in Macroeconomics and Finance. The third part deals with Hidden Markov Models, Regime Switching, and Mathematical Finance, and the fourth part is on Nonlinear State-Space Models for High-Frequency Financial Data. The book will appeal to graduate students and researchers studying state-space modeling in economics, statistics, and mathematics, as well as to finance professionals.
