**Losing Control** Paul Rogers,2010-04-15 When Losing Control was first published a decade ago it was years ahead of its time Its argument was simple the real causes of global insecurity were the widening socio economic divide global marginalization and environmental limitations especially climate change and conflict over energy resources Paul Rogers one of the most original thinkers on international security pointed to a world in which irregular warfare from the margins would prevent powerful states from maintaining their position He even predicted accurately how the United States would respond to a catastrophic attack The new edition brings the whole analysis right up to date arguing persuasively that the world s elite cannot maintain control and that a far more emancipatory and sustainable approach to global security has to be developed

In the wake of 9 11 the Asian crisis and the 2004 tsunami traditional analytical frameworks are increasingly unable to explain how individuals and communities are rendered insecure or advance individual global or environmental security In the Asia Pacific the accepted wisdom of realism has meant that analyses rarely move beyond the statist militarist and exclusionary assumptions that underpin traditional realpolitik This innovative new book challenges these limitations and addresses the missing problems people and vulnerabilities of the Asia Pacific region It also turns a critical eye on traditional interstate strategic dynamics Critical security in the Asia Pacific applies both a critical theoretical approach that interrogates the deeper assumptions underpinning security discourses and a human centred policy approach that focuses on the security welfare and emancipation of individuals and communities Leading Asia Pacific researchers combine to apply these frameworks to the most pressing issues in the region from the Korean peninsula to environmental change Indonesian conflict the war on terror and the plight of refugees The result is a sophisticated and accessible account of often neglected realities of marginalization in the region and a compelling argument for the empowerment and security of the most vulnerable

**Rethinking World Politics** Philip G. Cerny, 2010-03-24 Rethinking World Politics is a major intervention into a central debate in international relations how has globalization transformed world politics Most work on world politics still presumes the following in domestic affairs individual states function as essentially unified entities and in international affairs stable nation states interact with each other In this scholarship the state lies at the center it is what politics is all about However Philip Cerny contends that recent experience suggests another process at work transnational neopluralism In the old version of pluralist theory the state is less a cohesive and unified entity than a varyingly stable amalgam of competing and cross cutting interest groups that surround and populate it Cerny explains that contemporary world politics is subject to similar pressures from a wide variety of sub and supra national actors many of

which are organized transnationally rather than nationally In recent years the ability of transnational governance bodies NGOs and transnational firms to shape world politics has steadily grown Importantly the rapidly growing transnational linkages among groups and the emergence of increasingly influential even powerful cross border interest and value groups is new These processes are not replacing nation states but they are forging new transnational webs of power States he argues are themselves increasingly trapped in these webs After mapping out the dynamics behind contemporary world politics Cerny closes by prognosticating where this might all lead Sweeping in its scope Rethinking World Politics is a landmark work of international relations theory that upends much of our received wisdom about how world politics works and offers us new ways to think about the forces shaping the contemporary world Environmental Security Rita Floyd, Richard

Matthew, 2013-01-04 Economic development population growth and poor resource management have combined to alter the planet's natural environment in dramatic and alarming ways For over twenty years considerable research and debate have focused on clarifying or disputing linkages between various forms of environmental change and various understandings of security At one extreme lie sceptics who contend that the linkages are weak or even non-existent they are simply attempts to harness the resources of the security arena to an environmental agenda At the other extreme lie those who believe that these linkages may be the most important drivers of security in the 21st century indeed the very future of humankind may be at stake This book brings together contributions from a range of disciplines to present a critical and comprehensive overview of the research and debate linking environmental factors to security It provides a framework for representing and understanding key areas of intellectual convergence and disagreement clarifying achievements of the research as well as identifying its weaknesses and gaps Part I explores the various ways environmental change and security have been linked and provides principal critiques of this linkage Part II explores the linkage through analysis of key issue areas such as climate change energy water food population and development Finally the book concludes with a discussion of the value of this subfield of security studies and with some ideas about the questions it might profitably address in the future This volume is the first to provide a comprehensive overview of the field With contributions from around the world it combines established and emerging scholars to offer a platform for the next wave of research and policy activity It is invaluable for both students and practitioners interested in international relations environment studies and human geography **Security and**

Rogers,2011-11-30 Is international terrorism really the single greatest threat to world security Since the 9 11 attacks many Western governments assume terrorism to be the greatest threat we face In response their dangerous policies attempt to maintain control and keep the status quo by using overwhelming military force This important book shows why this approach has been such a failure and how it distracts us from other much greater threats of climate change competition over resources marginalisation of the majority of the world and global militarisation Unless urgent coordinated action is taken in the next 5 10 years on all these issues it will be almost impossible to avoid the earth becoming a highly unstable place by the middle years of this century Beyond Terror offers an alternative path for politicians journalists and concerned citizens alike
