Teamwork in Palliative Care Peter Speck, 2006-09-14 Teamwork is a complex but essential component of palliative care The needs of people diagnosed with life threatening disease will vary greatly over time and it is rarely possible for just one professional to be able to provide adequate care In order to ensure an holistic approach the whole multi disciplinary team must be involved Inevitable questions arise from such an approach and this book seeks to address these How does a team come into being What different formats are there How might the patient contribute to the effectiveness of their care and the way in which the team operates What are the difficulties and frustrations

encountered in developing and maintaining such teams What models of working and styles of leadership have developed How are power and authority handled within the team setting The importance of team building training support attention to group process and stress management to protect the mental health of the team are explored The ethical issues inherent in palliative care such as consent autonomy confidentiality decision making within teams and the legal implications of such are also discussed The book concludes with one important question do we know if teams are the most effective way of providing care This book addresses key issues surrounding the role of the team in palliative care and is an essential guide to reappraising the importance of collaborative teamwork and enhancing understanding of existing team structures **Palliative Medicine**
