**The Marine Biology of the South China Sea III** Brian Morton, 1998-07-01 The first conference on the Marine Biology of the South China Sea was convened in Hong Kong in 1990 to celebrate the opening of the Swire Institute of Marine Science The second was convened in Guangzhou China in 1993 The third conference returned to Hong Kong in 1996 and in a continuing pattern of growth was attended by 127 scientists and students from 14 countries and territories Of the 104 keynote addresses papers and posters presented at the meeting 42 are published here following critical peer review under the symposium categories of Taxonomy and Biological Diversity Biology and Ecology and Coastal Zone Management and Conservation of the Biological Resources of the South China Sea Each conference sets its own symposia themes but in view of the rapid perceived decline in the marine environment of the South China Sea and the overexploitation of its resources the 1996 meeting focused its attention on these issues There are many meetings related to marine science convened by the countries of the South China rim Some are national others are international but most are typically convened by agencies and attendance is restricted to an invited few usually senior scientists Europe hosts a European Marine Biology Symposium that is convened in a different country each

year and which sets the meeting's themes. The proceedings of those meetings constitute one of the most authoritative accounts of the marine biology of European waters. The meeting itself provides a forum for scientists and students so that international collaborative research is now a key feature of European marine science. First convened in 1996, the 32 symposia are a tribute to international co-operation in research in a marine environment that of itself knows no boundaries. The South China Sea countries also need such a forum free of political dogma. This conference proceedings is the third to help promote such an event, hopefully one day at a greater frequency than three years. The fourth conference is to be convened in the Philippines in 1999. This volume then is an international perspective on the South China Sea by scientists who research it and are concerned for its future. It contains information that should appeal to marine biologists throughout the world and in particular to those in Asia.

Biology and Evolution of the Mollusca, Volume 1 Winston Frank Ponder, David R. Lindberg, Juliet Mary Ponder, 2019-11-18

Molluscs comprise the second largest phylum of animals after arthropods, occurring in virtually all habitats. Some are commercially important, a few are pests, and some carry diseases, while many non-marine molluscs are threatened by human impacts which have resulted in more extinctions than all tetrapod vertebrates combined. This book and its companion volume provide the first comprehensive account of the Mollusca in decades. Illustrated with hundreds of colour figures, it reviews molluscan biology, genomics, anatomy, physiology, fossil history, phylogeny, and classification. This volume includes general chapters drawn from extensive and diverse literature on the anatomy and physiology of their structure, movement, reproduction, feeding, digestion, excretion, respiration, nervous system, and sense organs. Other chapters review the natural history, including ecology of molluscs, their interactions with humans, and assess research on the group. Key features of both volumes: up-to-date treatment with an extensive bibliography; thoroughly examines the current understanding of molluscan anatomy, physiology, and development; reviews fossil history and phylogenetics; overviews ecology and economic values and summarises research activity and suggests future directions for investigation. Winston F. Ponder was a Principal Research Scientist at The Australian Museum in Sydney where he is currently a Research Fellow. He has published extensively over the last 55 years on the systematics, evolution, biology, and conservation of marine and freshwater molluscs, as well as supervised postgraduate students and run university courses. David R. Lindberg is former Chair of the Department of Integrative Biology, Director of the Museum of Paleontology, and Chair of the Berkeley Natural History Museums, all at the University of California. He has conducted research on the evolutionary history of marine organisms and their habitats on the rocky shores of the Pacific Rim for more than 40 years. The numerous elegant and interpretive illustrations were produced by Juliet Ponder.
