The Spirit of the Tarot Claudine Aegerter, Berenice Benjelloun, 2009-12-31 This is a new exploration of the Tarot which reveals the esoteric numerological links underlying this ancient system and connects the teaching of the Tarot to the initiatic journey of the Soul If you are aspiring to connect with the mysteries of our life on this planet or you are already a disciple in some school of spiritual attainment this is a book which will illuminate your way As we explore beyond those physical emotional and mental aspects that we call the personality we find another energy that is not so easy to define and which seems to move us at a deeper level this is the Soul When we are receptive to the Soul s mystery we can start to connect to the universal collective energy of the Spirit The different stages in the fusion of personality and Soul and the unknown unseen alchemy of transmutation from matter to Spirit are illustrated by the twenty two cards of the Major Arcana The symbols are explained and the deeper esoteric meaning of each card is explored with the help of number This provides practical steps that can be applied to the everyday lives of those who seek greater consciousness Claudine Aegerter started Transcendental Meditation in 1970 then joined the National Federation of Spiritual Healers where she realised her abilities to channel She then started teaching and giving workshops in esoteric subjects As a leader in her field a counsellor and a healer she founded the Connaissance School of Numerology in 1993 bringing unique insights into the initiation of consciousness to many around the world Berenice Benjelloun has worked as a professional artist Homeopath workshop leader and Numerologist The inspiration and underlying energy behind all her occupations has always been the promotion of the expanding consciousness of mankind She teaches at The Connaissance School of Numerology and is Vice chair of the Association Internationale de Numerologues

Spectroscopy: The Key to the Stars Keith Robinson, 2007-08-15 While most amateur astronomers know about the red shift have a general idea of the way that the emission and absorption lines in stellar spectra provide an insight into the atomic processes of the star it is unusual to find someone who has any kind of detailed knowledge The reason isn t lack on interest far from it but is because all the books currently available are pitched at professional astronomers and degree students and are to say the least difficult to read This

is the first non technical book on this subject written specifically for practical amateur astronomers It includes all the science necessary for a qualitative understanding of stellar spectra but avoids a mathematical treatment which would alienate many of its intended readers Any amateur astronomer who carries out or who is interested in observational spectroscopy and who wants a non technical account of the physical processes which determine the intensity and profile morphology of lines in stellar spectra will find this is the only book written specially for him And of course armchair astronomers who simply want to understand the physical processes which shape lines in stellar spectra will find this book equally fascinating

Cartography of the Sun and the Stars Jean-Pierre Rozelot, Coralie Neiner, 2016-03-11 The mapping of the surface of stars requires diverse skills analysis techniques and advanced modeling i e the collaboration of scientists in various specialties This volume gives insights into new techniques allowing for the first time to obtain resolved images of stars It takes stock of what has been achieved so far in Chile on the ESO VLTI instrument or in the States on the CHARA instrument In recent times interferometry combined with adaptive optics has allowed to reconstruct images of stars Besides the Sun of course by now five stars have been resolved in detail In addition to interferometry this book highlights techniques used for mapping the surfaces of stars using photometry made by space observatories Zeeman and Doppler Imaging mapping the surface element abundances via spectroscopy This book will also take stock of the best images of the solar surface made by connecting the differential rotation to the underlying physical parameters derived from helioseismology Recent measurements of flattening of the solar surface by SDO showed that the Sun s shape is linked to the rotation of the core It is shown how such a result is generalizable to the stars *On the Evolution of the Stars with Mass Reduction* Conrad Leopold Lönnqvist, Conrad Lönnqvist, 1927
