A Typology of Numeral Systems in South Asian Languages Kumari Mamta, 2024-04-10 This book takes a journey into the fascinating world of numerical systems in South Asian languages offering a unique exploration of the intricate patterns, cultural nuances and historical significance embedded within the numerical frameworks of the given languages. It blends the discovery of new facts with the reinterpretation of existing ones while developing a methodology for investigating number systems that can be applied to languages around the world. It is a groundbreaking study that unveils the complex linguistic patterns and socio cultural significance of numerical systems in South Asian languages offering valuable insights for researchers, linguists, anthropologists and language enthusiasts alike. Altorientalischer Forschungen Gebhard J. Selz, Klaus Wagensohn, 2011 This volume's 23 contributions from senior and younger researchers working with the Ancient Near Eastern heritage are based on the hypothesis of a general empiric

attitude of Ancient Mesopotamian scholarship The articles try to elucidate these underlying principles making use of various sorts of modern theories and methods The book covers a broader range of topics astronomy politics agriculture and irrigation linguistics architecture medicine and others *Plurality and Classifiers across Languages in China* Dan Xu, 2012-12-19

Plural marking numeral classifiers and reduplication constitute the main means of quantification marking in the domain of grammar The contributions in this book focus on the typological correlation between the three different strategies for quantification as well as on some general issues A better understanding of the quantification strategies in the languages of China will enrich our comprehension of human language and thought The book is expected to have an impact on the study of linguistic typology language contact and patterns of the evolution *The Languages and Linguistics of Mainland Southeast Asia* Paul Sidwell, Mathias Jenny, 2021-08-23

This book offers a novel account of the nature of numbers firmly grounded in results from numerical cognition and the philosophy of mathematics Drawing on empirical data on the human experience of what we call numbers the author shows that numbers do not exist as abstract objects but that the idea that they do is a useful cognitive tool Contrary to the platonist view according to which arithmetic is true of a realm of abstract entities the nominalistic account presented in this book shows arithmetic to be true of descriptions of structural properties of techniques such as counting and calculating procedures This book is of interest to both philosophers and cognitive scientists who want to have a deeper understanding of what numbers are *Language in Time and Space* Brigitte L.M. Bauer, Georges-Jean Pinault, 2011-03-01

The honoree of this Festschrift has for many years now marked modern trends in diachronic and synchronic linguistics by his own publications and by stimulating those of numerous others This collection of articles presents data oriented studies that integrate modern and traditional approaches in the field thus reflecting the honoree's contribution to contemporary linguistics The articles relate to comparative data from early Indo European languages and a variety of other languages and discuss the theoretical implications of phenomena such as linguistic universals reconstruction
