**Psychiatric-mental Health Nursing** Barbara Schoen Johnson, 1989      **Alzheimer's Disease** Abraham Fisher, Israel

Hanin, Chaim Lachman, 2012-12-06 Alzheimer's disease is a primary neurodegenerative disease whose incidence and prevalence is rapidly approaching epidemic proportions. A major reason for this is that man is living longer than he has ever lived before and the likelihood of contracting the disease is significantly greater within the elderly portion of the population. The problem becomes even more acute in the light of recent estimates which predict that the number of people living beyond the age of 65 is expected to continue to increase. The impact of these statistics on the family and the health care industry in terms of time effort and cost are staggering. A recent report issued by the Michigan Task Force on Alzheimer's Disease and Related Conditions 1987 effectively underscores this last point. Each person with a dementing disease requires an average of seven years of care either at home or in a residential care facility. Care provided at home is estimated to cost about 12 000 annually for a total of 84 000 per person. This is a conservative figure however because many persons with dementia spend their last few years in a nursing home at an average cost of 22 000 per year and some spend from 10 to 15 years in a nursing home for a total cost of 220 000 to 330 000.

In addition, this book thoroughly explains effective collaboration with other health disciplines including when to seek referral and consultation. Nurses, nurse practitioners.

Payne, 1986. *Mental Health-psychiatric Nursing* Ruth Parmelee Rawlins, Sophronia R. Williams, 1984. *Suicide-Related Behaviour* Columba McLaughlin, 2007-06-29. The book is an attempt to make sense of suicide related behaviour in terms of understanding its aetiology and how practitioners can respond in a caring and therapeutic manner. The last 30 years the data gathered has consistently indicated that suicide is a leading cause of death in young people especially men. Alongside this the incidence of self harm which has always been high does not seem to be abating. Some professionals argue that attempted suicide and self harm are both the same entity. This book puts forward that they are two sides of the same coin and this coin is called suicide related behaviour. This is a general term used in the book to describe all behaviours where the person intended to kill or harm themselves. In doing so relevant issues within the phenomenon of suicide related behaviour and specific to both self harm and attempted suicide will be explored and addressed.
