Nutrients Valorisation Via Duckweed-based Wastewater Treatment and Aquaculture Saber Abdel-Aziz Abdel-Salam Eutrophication: causes, consequences and control Abid A. Ansari, Gill Sarvajeet Singh, Guy R. Mohamed El-Shafai, 2004 Lanza, Walter Rast, 2010-10-17 Eutrophication continues to be a major global challenge to water quality scientists. The global demand on water resources due to population increases economic development and emerging energy development schemes has created new environmental challenges to global sustainability Eutrophication causes consequences and control provides a current account of many important aspects of the processes of natural and accelerated eutrophication in major aquatic ecosystems around the world The connections between accelerated eutrophication and climate change chemical contamination of surface waters and major environmental and ecological impacts on aquatic ecosystems are discussed Water quality changes typical of eutrophication events in major climate zones including temperate tropical subtropical and arid regions are included along with current approaches to treat and control increased eutrophication around the world The book provides many useful new insights to address the challenges of global increases in eutrophication and the increasing threats to biodiversity and water quality Integrated Pollution Prevention and Control for the Municipal Water Cycle in a **River Basin Context** Alberto Galvis-Castaño, 2019-08-14 The protection of water resources from deterioration in quality by pollution discharges is probably the biggest challenge in sustainable water resources management in the recent decades In practice most countries have adopted pollution control strategies and measures which are based on end of pipe solutions wastewater treatment plants and adjustments to the regulations including taxes for wastewater discharges Conventional Strategy Although this approach involves very high costs on many occasions this strategy has been a complete failure The research described in this book contribute to the development of sustainable solutions for the previously outlined problem It was based on the validation of the Three Step Strategic Approach concept 3 SSA which includes 1 prevention or minimisation of waste production 2 treatment aimed at recovery and reuse of waste components and 3 disposal of remaining waste with stimulation of natural self purification of the receiving water body The study showed overall positive effects of the 3 SSA in comparison of Conventional Strategy on wastewater management in the Upper Basin 389 km of the Cauca river the second most important river in Colombia The Cost Benefit Analysis clearly favoured the 3 SSA generating a major impact on the river water quality at lower cost compared to the Conventional Strategy **Biomass for Environmental Remediation** Yasser Vasseghian, 2025-03-29 Biomass for Environmental Remediation explores the pivotal role of biomass in revolutionizing environmental remediation From wastewater treatment to air pollution control and soil remediation this book delves into the myriad applications of biomass including the synthesis of advanced nanomaterials for sustainable solutions Users will find the latest advancements in harnessing organic resources for a cleaner and greener future while also uncovering the diverse sources of biomass and the innovative techniques transforming them into powerful tools for environmental restoration With

insightful chapters on phytoremediation microbial applications and the production of biomass derived nanomaterials this book serves as a vital guide for professionals researchers and students at the forefront of environmental sustainability Covers the entire biomass lifecycle allowing readers to gain a holistic understanding of how biomass can be seamlessly integrated into environmental projects Includes real world case studies that provide readers with practical insights into successful biomass applications Explores the synthesis of advanced nanomaterials from biomass and their applications in environmental remediation Fingerponds Rose Christine Kaggwa, 2006 Finally in conclusion the research has demonstrated that with correct management enhanced fish production in Fingerponds is possible **Effect of Operational Variables on** Nitrogen Transformations in Duckweed Stabilization Ponds Julia Rosa Caicedo Bejarano, 2005-03-24 There is an urgent need to develop and improve low cost technologies for wastewater treatment Simultaneously treating wastewater and producing duckweed in a pond system is therefore an attractive solution contributing to both environmental protection and food production Duckweed has excellent qualities a high protein content a high growth rate and is an easy crop to handle The small plant turns nitrogen from wastewater into a food source This thesis reports on the effect of different operational variables like anaerobic pre treatment the combination of algae and duckweed ponds and pond depth Improved nitrogen removal was obtained through the combination of duckweed ponds with algae ponds Duckweed pond systems could be designed with shallow depth without affecting nitrogen removal efficiency. This research is the result of the cooperative effort between the EIDENAR Univalle Cali Colombia and the UNESCO IHE Institute for Water Education in Delft the Netherlands

Valorization of Biomass Waste Materials, a Biorefinery Concept Oluwatoyin Joseph Gbadeyan, Patrick Sekoai, Viren Chunilall, 2024-10-30 Waste has become an emerging problem threatening the ecosystem given the harmful content generated from the global afterlife of waste These problems affect all spheres of life and the waste must be controlled managed or converted to new products The fundamental ways of addressing the increasing global flows of waste revealed through management processes have significantly increased business opportunities Waste must be transformed into valuable products to reduce pollution create jobs and an environmentally pleasant atmosphere Researchers have invented methods of converting waste into value added products aiming toward waste management and reduction Despite considerable advances the reuse and recycling of agricultural waste as biomass resources renewable feedstock for renewable energy generation and specialty chemicals from several natural sources are underutilized This collection of essays discusses different biomass waste sources biomass feedstocks characterization pre treatment and techniques for valorizing biomass to value added products and policies and regulations on the circular economy
