and cancer prevention Diabetes and Cardiovascular Disease Aubie Angel, Naranjan S. Dhalla, Grant N. Pierce, Pawan K. Singal, 2012-12-06 Diabetes and cardiovascular disease together account for the largest portion of health care spending compared to all other diseases in Western society. This work seeks to provide an understanding of the causes of diabetes and its cardiovascular complications. As this understanding becomes more widely appreciated, it will serve as a foundation for evidence-based care and wider acceptance of sound science. The International Conference on Diabetes and Cardiovascular Disease held in Winnipeg in June 1999 was organized to bring together a multi-disciplinary group of researchers dedicated to further knowledge amongst researchers, care givers, and the managers of the health system. The invited speakers submitted their works for publication which serves as the basis for this book. Major themes include epidemiology of diabetes mellitus, metabolic risk factors in diabetes and cardiovascular disease, hypertension in diabetes mellitus, cardiac function in diabetes, glycemic control, and improved cardiovascular function, diabetes management, and endothelial function in diabetes.

Noninvasive Assessment of Trabecular Bone Architecture and The Competence of Bone Sharmila Majumdar, Brian K. Bay, 2012-12-06 The study of bone microarchitecture is flourishing because of a recent shift in perspective that has taken researchers beyond utilizing bone mineral density as the primary source of information about certain matters related to bone. In the area of osteoporosis and skeletal changes, bone mineral density (BMD) is widely used for screening, monitoring, and assessing therapeutic efficacy, and yet it is currently accepted that BMD does not fully explain the pathogenesis of osteoporosis, the process of aging, nor mechanisms of therapeutic efficacy. In this context, the study of trabecular microarchitecture has much to contribute. The emerging field of trabecular microarchitecture, however, is diverse, interdisciplinary, and encompasses many different imaging modalities. This volume represents a compilation of papers from world-renowned researchers reflecting the most current research in the area of noninvasive assessment of trabecular microarchitecture. This varied research applies sophisticated imaging tools to questions of bone biomechanics at both the basic science and clinical levels. The authors' works range from review articles and research articles to works in progress. Taken together, they offer a foray into the state of the art of investigating bone at its most basic levels. **Bioactive**

Components of Human Milk David S. Newburg, 2012-12-06 The major emphasis in this book is a compilation and definition of what is known about components of human milk, including glycoconjugates that inhibit common pathogens of the infant. Also discussed are other bioactive constituents whose relevant biological roles are also beginning to be defined. Hormonal and cytokine activity, immunomodulating and autoinflammatory agents, xenobiotics, and conditionally essential nutrients in milk could have roles in the protection of the infant but may also participate in digestive processes, maternal-infant communication, maturation of the gut, central nervous system, and other components of infant growth and development. Like the protective activities, these are discussed in terms of their presence in milk structures, potential functions, and structure-function relationships. Components whose role is nutritional support during early development of the infant are also included.
