Nutrition Genetics And Heart Disease:

Nutrition, Genetics, and Heart Disease George A. Bray, Donna H. Ryan, 1996-01-01 Contains papers from a March 1995 conference After an overview of the role of diet in the prevention of heart disease sections address diet and thrombogenic activity dietary fat and lipoprotein metabolism genetic polymorphisms and risk for coronary heart disease and genetic control of lipoproteins
Nutrition, Genetics, and Cardiovascular Disease Marwan El Ghoch, Said El

Shamieh, 2020-10-07 Cardiovascular diseases are the first cause of death worldwide in which genetic and environmental factors seem to play a determinant role In fact several lifestyle i e dietary physical inactivity factors and nutritional related diseases i e obesity type 2 diabetes are strongly associated with cardiovascular diseases Moreover genome wide association studies have also identified numerous genomic loci that determine susceptibility to cardiovascular events Therefore nutrition and genetics seem to interact in predisposing an individual to cardiovascular diseases This book provides a presentation of recent advances in knowledge on nutrition genetics and cardiovascular disease coming from diverse scientific disciplines

Nutritional and Metabolic Bases of Cardiovascular Disease Mario Mancini, Jose M. Ordovas, Gabrielle Riccardi, Paolo Rubba, Pasquale Strazzullo, 2011-07-11 Extraordinary advances in the understanding of the links between nutrition metabolism and cardiovascular disease have prompted a systematic reappraisal of knowledge in the field As a result it is now imperative that clinicians who care for patients with CVD or its key risk factors have a solid understanding of the often complex interrelationships between cardiovascular health and chronic diseases such as diabetes and obesity Written by a team of international thought leaders in cardiology endocrinology diabetology and nutritional science this important new book Examines and updates the role of obesity hyperlipidemia diabetes hypertension thrombosis and aging in atherogenesis Describes in detail the scientific and clinical evidence of the etiopathogenesis of ischemic heart disease as well as of peripheral and cerebrovascular disease Focuses on the 6 topics that will be of greatest interest to readers 1 general nutrition 2 metabolic syndrome and diabetes 3 hyperlipidemia and atherosclerosis 4 hypertension and cerebrovascular disease 5 hemostasis and thrombosis 6 aging Throughout the book in clear and accessible text contributors illuminate the close relationship between dietary habits the metabolic processes of nutrients and their impact on the cardiovascular system always with an eye on how the physician can use this information to implement better cardiovascular prevention and improve patient care *Nutritional and Metabolic Bases of Cardiovascular Disease* is ideal for those who need to update their knowledge of the links between nutrition metabolism and CVD from trainees clinicians and clinical investigators in cardiovascular medicine to endocrinologists diabetologists and nutritionists
Genetic Factors In Nutrition Hector Bourges, 2012-12-02 *Genetic Factors in Nutrition* presents the proceedings of the International Workshop on Genetic Factors in Nutrition held in Teotihuacan Mexico on August 4-8 1982 The papers explore the link between genetics and nutrition in the context of biological evolution They provide examples of successful interaction between the two disciplines and consider some aspects

of nutrient requirements as well as utilization and consideration of methodological approaches to evaluate nutritional status with an emphasis on malnutrition Divided into six parts encompassing 29 chapters this volume begins with an overview of genetics and nutrition from an evolutionary perspective citing findings among Amerindians It proceeds with a discussion of the potential application of genetic epidemiology in nutritional research nutrient requirements and metabolism the association between obesity and energy balance and assessment of nutritional status It also presents case studies of the correlation between genetics and nutrition before introducing the reader to genetic inheritance and growth in human groups suffering from chronic under nutrition Some data derived from nutrition longitudinal studies are analyzed to interpret the nutrition genetics interaction This book will be a valuable source of information for scientists and students in genetics and nutrition

Genome-based Nutrition Strategies for Preventing Diet-related Chronic Diseases: Where Genes, Diet, and Food Culture Meet Arturo Panduro, Omar Ramos-Lopez, Claudia Ojeda-Granados, 2024-07-02 Human populations that have recently undergone substantial changes in their traditional social cultural and dietary habits have shown an increased susceptibility to developing chronic diet related diseases concerning their genetic background One factor is that the population s adaptive genetic variants related to its evolutionary history are exposed to different physical and lifestyle environments that underlie and influence the current patterns of disease risk Under this perspective the current obesogenic environment has promoted the acculturation of a westernized diet disrupting the ancestral gene foods nutrients bioactive compounds interactions i e ancestral genetic ethnic profile vs modern lifestyle Modern lifestyles including unhealthy dietary patterns have further impaired the consumption of staple foods with essential nutrients and functional properties increasing the incidence of obesity and associated comorbidities However most conventional nutrition approaches targeting chronic diseases have limited impact on managing the leading non communicable diseases affecting modern societies

Evolutionary Aspects of Nutrition and Health A. P. Simopoulos, Berthold Koletzko, 1999-07 The issues treated in this publication are brought together in this way for the first time For many of the chronic diseases familial predispositions are well established and there is good evidence for true genetic predisposition When Homo erectus emerged 1.7 million years ago humans existed as non cereal eating hunter gatherers It is on this basis that according to the hypothesis of the carnivore connection an insulin resistant genotype evolved to provide survival and reproductive advantages to populations adapted to a high meat low plant food low carbohydrate nutritional environment Cereal became the major source of calories and protein in the human diet only about 10 000 years ago Humankind has thus had little evolutionary experience to adapt to this new food type maladaptation being the consequence Moreover studies comparing energy expenditure in Western societies and during the Paleolithic period indicate a low level of physical activity not previously encountered in human history a state to which humans are not genetically adapted Together with the dietary changes this has led to a modern environment in which a number of individuals are prone to chronic diseases causing increases in non insulin dependent diabetes mellitus hypertension coronary artery disease cancer and obesity As a consequence the lifestyle approach for the prevention and management of these diseases is essential varying with national dietary patterns and national economy This publication will be of special interest to physicians geneticists nutritionists dietitians anthropologists food technologists food policy makers and individuals interested in personal and family health

Nutrition and Heart Disease Ronald Ross Watson, Victor R. Preedy, 2003-12-17 Heart disease is the primary cause of death and disability in Western countries Research indicates that nutrition and diet play key roles in both preventing and causing many types of heart damage and dysfunction By understanding the complex relationship between diet and disease new prevention measures can be established and millions of lives can

Genetic Variation and Nutrition A. P. Simopoulos, B. Childs, 1990-06-20

Genetic Variation and Dietary Response Artemis P. Simopoulos, P. J. Nestel, 1997-01-01 This timely volume focuses on genetics and nutrition and their interaction in the development of chronic diseases Knowledge of genetic susceptibility to disease will not only help to identify those at higher risk for disease but also to ascertain their response to diet The prospect of targeting specific dietary treatment at those predicted to gain the most therapeutic benefit clearly has important clinical and economic consequences particularly in diseases of high prevalence This book is unique in considering genetic variation in susceptibility to disease and the importance of specific diets in influencing lipid levels in cardiovascular disease and bone density in osteoporosis The contributions emphasize that dietary response is dependent on the genetic variant and that specific dietary recommendations rather than universal ones are needed for the prevention and management of chronic diseases Bringing together vital information for the first time this book is important reading for physicians nutritionists dietitians geneticists physiologists molecular biologists food technologists and policymakers
