Community Nutrition for Developing Countries Norman J. Temple, Nelia Steyn, 2016-03-31

Nutrition textbooks used by universities and colleges in developing countries have very often been written by scholars who live and work in North America or the United Kingdom. And while the research and information they present is sound, the nutrition-related health challenges with which developing countries must grapple differ considerably from those found in highly industrialized Western nations. The primary aim of *Community Nutrition for Developing Countries* is to provide a book that meets the needs of nutritionists and other health professionals living and working in developing countries. Written by both scholars and practitioners, the volume draws on their wealth of knowledge, experience, and understanding of nutrition in developing countries to provide nutrition professionals with all the information they require. Each chapter addresses a specific nutrition challenge currently faced by developing countries, such as food security, food safety, disease prevention, maternal health, and effective nutrition policy. In addition, the volume serves as an invaluable resource for those developing and implementing nutrition education programmes. With an emphasis on nutritional education as a means to prevent disease and effectively manage health disorders, it is the hope of the nearly three dozen contributors to this work that it will enhance the health and well-being of low-income populations throughout the world.

NUTRITION and GLOBAL HEALTH

Nutrition and Global Health began as a series of short literature reviews; since then, the work has become an authoritative and highly accessible resource on the vast and nuanced subject matter covered within. One of the major themes of the work is integrating nutrition into other disciplines, with its basis in biochemistry, human physiology, behavioural science, and even political studies. Nutrition is a vital component in the success of interventions. This book will provide students and practitioners with a roadmap for interpreting the global health landscape and create links between nutritional physiology, policy, and action. Based on widely used practices in global health, *Nutrition and Global Health* covers topics including: Assessing nutritional status, nutrition surveillance, nutrition and infectious disease, and maternal and child nutrition. Micronutrient deficiencies, including but not limited to iron, iodine, vitamin A, zinc, and folate, plus the nutritional double burden of disease. Food security, sustainable food, and agriculture working in the global health environment, and nutrition in emergencies. Answers to the questions: How do I design an effective intervention? and How can I decide whether or not my intervention has done what I intended it to do? Unlike long and complex policy documents which rely on a solid foundation in basic sciences, *Nutrition and Global Health* is an accessible resource that allows clinicians, policy makers, and planners to better understand the global health landscape and stage better interventions.
