THE KING GEORGE III COLLECTION

THE KING GEORGE III COLLECTION in the Science Museum, London, is a unique assembly of early apparatus for demonstrating scientific principles. The items in it are varied, richly informative about eighteenth-century science, and often visually attractive. Two main groups within the collection reflect contrasting aspects of 'natural philosophy' at that time: private science, represented by the fine instruments which George III commissioned for his own collection, and public science, seen through the workaday demonstration equipment used by an itinerant lecturer, Stephen Demainbray. The two groups were united when Demainbray became superintendent of the King's private observatory at Richmond in 1769. Later they passed into the care of the Science Museum, where, with additional material from the seventeenth to nineteenth centuries, they form the King George III Collection.

In the introductory chapters of this book, public and private aspects of the spread of scientific knowledge in the eighteenth century are explored and linked to broader cultural developments of the period. The second part is a detailed catalogue of the entire collection, with newly commissioned photographs of almost every item.

Public and Private Science is the first complete and definitive description of the King George III Collection and its context, and has been produced to coincide with the opening in the Science Museum of a gallery in which many

George III Jeremy Black, 2008-10-01 The sixty year reign of George III 1760 1820 witnessed and participated in some of the most critical events of modern world history the ending of the Seven Years War with France the American War of Independence the French Revolutionary Wars the campaign against Napoleon Bonaparte and battle of Waterloo in 1815 and Union with Ireland in 1801 Despite the pathos of the last years of the mad blind and neglected monarch it is a life full of importance and interest Jeremy Black's biography deals comprehensively with the politics the wars and the domestic issues and harnesses the richest range of unpublished sources in Britain Germany and the United States But using George III's own prolific correspondence it also interrogates the man himself his strong religious faith and his powerful sense of moral duty to his family and to his nation Black considers the king's scientific cultural and intellectual interests as no other biographer has done and explores how he was viewed by his contemporaries Identifying George as the last British ruler of the Thirteen Colonies Black reveals his strong personal engagement in the struggle for America and argues that George himself his intentions and policies were key to the conflict

Scientific Instruments on Display, 2014-08-14 During their active lives scientific instruments generally inhabit the laboratory observatory classroom or the field But instruments have also lived in a wider set of venues as objects on display As such they acquire new levels of meaning their cultural functions expand This book offers selected studies of instruments on display in museums national fairs universal exhibitions patent offices book frontispieces theatrical stages movie sets and on line collections The authors argue that these displays as they have changed with time reflect changing social attitudes towards the objects themselves and toward science and its heritage By bringing display to the center of analysis the collection offers a new and ambitious framework for the study of scientific instruments and the material culture of science Contributors are Amy Ackenberg Hastings Silke Ackermann Marco Beretta Laurence Bobis Alison Boyle Fausto Casi Ileana Chinnici Suzanne D barbat Richard Dunn Inga Elmqvist S derlund Ingrid Jendrzewski Peggy A Kidwell Richard Kremer Mara Miniati Richard A Paselk Donata Randazzo Steven Turner

Rabb,2019-02-14 Focusing on the phenomenon of miniaturization in material culture literature and theories of cognition this study examines the appeal and function of the small scale during the period from 1650 to 1765 Drawing on three interconnected areas of scholarship Melinda Alliker Rabb analyzes the human capacity to supplement direct experience of the world through representation in order to gain knowledge of that world and to attempt control over it Assessing two kinds of miniature the real and the imagined allows rethinking of works by Swift Pope Gay Johnson Sterne and others and shows how the fictional miniature can correspond meaningfully to the world of things The phenomenon of scaling down objects as various as teapots bureaus globes buckets spoons battlefields and diving bells has a relationship to large scale events as various as financial revolution globalization scientific discovery war and other events that challenge old modes of representation and demand new ones

Life after Gravity Patricia Fara,2021-02-24

The story of Isaac Newton s decades in London as ambitious cosmopolitan gentleman President of London s Royal Society Master of the Mint and investor in the slave trade Isaac Newton is celebrated throughout the world as a great scientific genius who conceived the theory of gravity But in his early fifties he abandoned his life as a reclusive university scholar to spend three decades in London a long period of metropolitan activity that is often overlooked Enmeshed in Enlightenment politics and social affairs Newton participated in the linked spheres of early science and imperialist capitalism Instead of the quiet cloisters and dark libraries of Cambridge s all male world he now moved in fashionable London society which was characterized by patronage relationships sexual intrigues and ruthless ambition Knighted by Queen Anne and a close ally of influential Whig politicians Newton occupied a powerful position as President of London s Royal Society He also became Master of the Mint responsible for the nation s money at a time of financial crisis and himself making and losing small fortunes on the stock market A major investor in the East India Company Newton benefited from the global trading networks that relied on selling African captives to wealthy plantation owners in the Americas and was responsible for monitoring the import of African gold to be melted down for English guineas Patricia Fara reveals Newton s life as a cosmopolitan gentleman by focussing on a Hogarth painting of an elite Hanoverian drawing room Gazing down from the mantelpiece a bust of Newton looms over an aristocratic audience watching their children perform a play about European colonialism and the search for gold Packed with Newtonian imagery this conversation piece depicts the privileged exploitative life in which this eminent Enlightenment figure engaged an uncomfortable side of Newton s life with which we are much less familiar

New Approaches to Naples c.1500-c.1800

Helen Hills, 2016-04-22 Early modern Naples has been characterized as a marginal wild and exotic place on the fringes of the European world and as such an appropriate target of attempts by Catholic missionaries and others to civilize the city. Historiographically bypassed in favour of Venice, Florence and Rome, Naples is frequently seen as emblematic of the cultural and political decline in the Italian peninsula and as epitomizing the problems of southern Italy. Yet as this volume makes plain, such views blind us to some of its most extraordinary qualities and limit our understanding not only of one of the world's great capital cities but also of the wider social, cultural and political dynamics of early modern Europe. As the centre of Spanish colonial power within Europe during the vicerealty and with a population second only to Paris in early modern Europe, Naples is a city that deserves serious study. Further, as a Habsburg dominion, it offers vital points of comparison with non-European sites which were subject to European colonialism. While European colonization outside Europe has received intense scholarly attention, its cultural impact and representation within Europe remain under-explored. Too much has been taken for granted. Too few questions have been posed. In the sphere of the visual arts, investigation reveals that Neapolitan urbanism, architecture, painting and sculpture were of the highest quality during this period while differing significantly from those of other Italian cities. For long ignored or treated as the subaltern sister of Rome, this urban treasure house is only now receiving the attention from scholars that it has so long deserved. This volume addresses the central paradoxes operating in early modern Italian scholarship. It seeks to illuminate both the historiographical pressures that have marginalized Naples and to showcase important new developments in Neapolitan cultural history and art history. Those developments showcased here include both

Sextants at Greenwich W.F.J. Mörzner Bruyns, Richard Dunn, 2009-06-25 This book describes the history and development of navigating instruments. Before satellites, these were used to measure the altitude of the sun and stars above the horizon to determine the ship's position at sea. The book also contains a catalogue of 347 mariner's astrolabes, cross-staffs, back-staffs and octants, sextants and artificial horizons.

Thomas Garnett Robert Fox, 2024-01-11 Thomas Garnett was a man of science and physician whose career took him from rural obscurity in 18th century Westmorland to metropolitan prominence as the first professor of natural philosophy and chemistry at the newly founded Royal Institution in London in 1799. His rise to the summit of British science was far from straightforward but is brought to life in vivid detail by Robert Fox. Fox gives an engrossing and moving account of the trials, triumphs and tragedies of Garnett's life, exploring his disputes with established doctors concerning the medicinal virtues of mineral waters, his involvement in the contested politics surrounding the creation of the Royal Institution of Great Britain and his premature death. In doing so, Fox deftly shows how Garnett's life can illuminate a wide canvas of the social history of British science and medicine in the crucial period of early industrialisation.

Inventing Temperature Hasok Chang, 2004-08-05 The author presents simple yet challenging epistemic and technical questions about temperature measuring instruments and the complex web of abstract philosophical issues surrounding them. He also shows that many items of knowledge we take for granted are in fact spectacular achievements.
