this is the only state of the art reference for professionals researchers and clinicians working with this material The only complete reference for professionals researchers and clinicians working with ultra high molecular weight polyethylene biomaterials technologies for joint replacement and implants New edition includes six new chapters on a wide range of topics including the clinical performance of highly crosslinked polyethylene HXLPE in hip and knee replacement an overview of antioxidant stabilization for UHMWPE and the medical applications of UHMWPE fibers State of the art coverage of the latest UHMWPE technology orthopedic applications biomaterial characterization and engineering aspects from recognized leaders in the field **Macromolecules** H.G. Elias,2013-11-11 The second edition of this textbook is identical with its fourth

German edition and it thus has the same goals precise definition of basic phenomena a broad survey of the whole field integrated representation of chemistry physics and technology and a balanced treatment of facts and comprehension The book thus intends to bridge the gap between the often oversimplified introductory textbooks and the highly specialized texts and monographs that cover only parts of macromolecular science The text intends to survey the whole field of macromolecular science Its organization results from the following considerations The chemical structure of macromolecular compounds should be independent of the method of synthesis at least in the ideal case Part I is thus concerned with the chemical and physical structure of polymers Properties depend on structure Solution properties are thus discussed in Part II solid state properties in Part III There are other reasons for discussing properties before synthesis For example it is difficult to understand equilibrium polymerization without knowledge of solution thermodynamics the gel effect without knowledge of the glass transition temperature etc Part IV treats the principles of macromolecular syntheses and reactions **Polymers for Electronic & Photonic Application** C. P. Wong,2013-10-22 The most recent advances in the use of polymeric materials by the electronic industry can be found in Polymers for Electronic and Photonic Applications This book provides in depth coverage of photoresist for micro lithography microelectronic encapsulants and packaging insulators dielectrics for multichip packaging electronic and photonic applications of polymeric materials among many other topics Intended for engineers and scientists who design process and manufacture microelectronic components this book will also prove useful for hybrid and systems packaging managers who want to be informed of the very latest developments in this field Presents most recent advances in the use of polymeric materials by the electronic industry Contributions by foremost experts in the field
