**Radical Ionic Systems** Anders Lund, Masaru Shiotani, 2012-12-06 It is now more than 20 years since the book *Radical Ions* edited by Kaiser and Kevan appeared It contained aspects regarding generation identification spin density determination and reactivity of charged molecules with an odd number of electrons New classes of reactive ion radicals have been detected and characterised since then most notably cation radicals of saturated organic compounds Trapping of electrons has been found to occur not only in frozen glasses but also in organic crystals The structure and reactions of anion radicals of saturated compounds have been clarified during the last 20 years We have asked leading experts in the field to write separate chapters about cation radicals anion radicals and trapped electrons as well as more complex systems of biological or technological interest More attention is paid to recent studies of the ions of saturated compounds than to the older and previously reviewed work on aromatic ions In the case of trapped electrons full coverage is out of the question and focus is on recent efforts to characterise the solvation structure in ordered and disordered systems

**Radicals on Surfaces** A. Lund, C.J. Rhodes, 2012-12-06 Studies of free radicals on surfaces are of interest for several reasons the spontaneous or stimulated formation of radicals from adsorbed molecules may represent one possible mechanism for heterogeneous catalysis In some cases the radicals are ionic indicating that primary oxidation and reduction reactions occur Radicals can also be used as probes to investigate diffusion processes on catalytic surfaces The first direct observations were made more than 30 years ago but detailed studies of structure reactions and mobility have only recently become feasible with the advent of powerful spectroscopic techniques

to a great extent developed and used by the contributors to this volume This comprehensive review describes new trends in the field Leading experts write about the nature of surface active sites methods to identify them and the radicals formed from adsorbed molecules interacting with the surface The emphasis is on the fundamentals covering thermal photostimulated and radiation induced reactions as well as diffusion processes This provides the necessary background for technological applications This book will be useful to those who are interested in surface chemistry heterogeneous catalysis as well as those who want to study reactive intermediates in chemical reactions It is also of interest to scientists in photo and radiation physics and chemistry

*Comprehensive Treatise of Electrochemistry* John Bockris, 2013-03-09 It is now time for a comprehensive treatise to look at the whole field of electrochemistry The present treatise was conceived in 1974 and the earliest invitations to authors for contributions were made in 1975 The completion of the early volumes has been delayed by various factors There has been no attempt to make each article emphasize the most recent situation at the expense of an overall statement of the modern view This treatise is not a collection of articles from Recent Advances in Electrochemistry or Modern Aspects of Electrochemistry It is an attempt at making a mature statement about the present position in the vast area of what is best looked at as a new interdisciplinary field Texas A M University J O M Bockris University of Ottawa B E Conway Case Western Reserve University Ernest Yeager M University Texas A Ralph E White Preface to Volume 2 This volume brings together some dozen processes well known to the electro chemist and treats them according to their various degrees of importance The production of hydrogen is one of the more important processes particularly with respect to the prospects of a hydrogen economy No one would doubt however that the most commercially important electrochemical processes at the present time are the production of aluminum and of chlorine Each of these processes has a separate chapter devoted to it
