Radionuclides In The Food Chain:

Radionuclides in the Food Chain John H. Harley, Gail D. Schmidt, Giovanni Silini, 2012-12-06 The Symposium on Radionuclides in the Food Chain sponsored by the International Life Sciences Institute in association with the International Institute for Applied Systems Analysis was intended to bring together policymakers and other representatives of the food industry with radiation experts involved in measuring and assessing radioactivity in foodstuffs The symposium was made timely by the problems arising from the nuclear reactor accident at Chernobyl in the USSR which brought out the lack of international agreement on guidance for responding to such radionuclide contamination of food and foodstuffs The presentations by the radiation experts covered the sources of radionuclides natural radioactivity fallout from nuclear weapons tests routine releases from nuclear facilities and various nuclear accidents The speakers represented a broad distribution in both scientific disciplines and international geographic origin They summarized the available data on measurements and indicated the current procedures for assessing radiation exposure It was hoped that the food industry representatives would bring out the problems posed to industry and governments by the presence of radioactivity in food

Radionuclides in the Food Chain Melvin W. Carter, 1988-01-01 **Principles and Methods of Toxicology, Fifth Edition** A. Wallace Hayes, 2007-09-25 Founded on the paradox that all things are poisons and the difference between poison and remedy is quantity the determination of safe dosage forms the base and focus of modern toxicology In order to make a sound determination there must be a working knowledge of the biologic mechanisms involved and of the methods employed to define these mechanisms While the vastness of the field and the rapid accumulation of data may preclude the possibility of absorbing and retaining more than a fraction of the available information a solid understanding of the underlying principles is essential Extensively revised and updated with four new chapters and an expanded glossary this fifth edition of the classic text *Principles and Methods of Toxicology* provides comprehensive coverage in a manageable and accessible format New topics include toxicoponomics plant and animal poisons information resources and non animal testing alternatives Emphasizing the cornerstones of toxicology people differ dose matters and things change the book begins with a review of the history of toxicology and followed by an explanation of basic toxicological principles agents that cause toxicity target organ toxicity and toxicological testing methods including many of the test protocols required to meet regulatory needs worldwide The book examines each method or procedure from the standpoint of technique and interpretation of data and discusses problems and pitfalls that may be associated with each The addition of several new authors allow for a broader and more diverse treatment of the ever changing and expanding field of toxicology Maintaining the high quality information and organizational framework that made the previous editions so successful *Principles and Methods of Toxicology Fifth Edition* continues to be a valuable resource for the advanced practitioner as well as the new disciple of toxicology **Evaluation of Data on the Transfer of Radionuclides in the Food Chain** G. Behavior of Radionuclides in the Environment II Alexei Konoplev, Kenji Kato, Stepan N. Kalmykov, 2020-05-19 This is Volume II in a three volume set on the Behavior of Radionuclides in the Environment focusing on Chernobyl Now so many years after the Chernobyl accident new data is emerging and important new findings are being made The book reviews major research achievements concerning the behavior of Chernobyl derived radionuclides including their air transport and resuspension mobility and bioavailability in the soil water environment vertical and lateral migration in soils and sediments soil to plant and soil to animal transfer and water to aqueous biota transfer The long term dynamics of radionuclides in aquatic ecosystems are also discussed in particular the heavily contaminated cooling pond of the Chernobyl Nuclear Power Plant which is in the process of being decommissioned Lessons learned from long term research on the environmental behavior of radionuclides can help us understand the pathways of environmental contamination which in turn will allow us to improve methods for modeling and predicting the long term effects of pollution This book features a wealth of original data and findings many of which have never been published before or were not available internationally The contributing authors are experts from Ukraine Russia and Belarus with more than 30 years of experience investigating Chernobyl derived radionuclides in the environment The content presented here can help to predict the evolution of environmental contamination following a nuclear accident and specifically the Fukushima Dai ichi nuclear power plant accident

Radionuclides in the Environment Clemens Walther, Dharmendra K. Gupta, 2015-10-30 This book provides extensive and comprehensive information to researchers and academicians who are interested in radionuclide contamination its sources and environmental impact It is also useful for graduate and undergraduate students specializing in radioactive waste disposal and its impact on natural as well as manmade environments A number of sites are affected by large legacies of waste from the mining and processing of radioactive minerals Over recent decades several hundred radioactive isotopes radioisotopes of natural elements have been produced artificially including ^{90}Sr ^{137}Cs and ^{131}I Several other anthropogenic radioactive elements have also been produced in large quantities for example technetium neptunium plutonium and americium although plutonium does occur naturally in trace amounts in uranium ores The deposition of radionuclides on vegetation and soil as well as the uptake from polluted aquifers root uptake or irrigation are the initial point for their transfer into the terrestrial environment and into food chains There are two principal deposition processes for the removal of pollutants from the atmosphere dry deposition is the direct transfer through absorption of gases and particles by natural surfaces such as vegetation whereas showery or wet

deposition is the transport of a substance from the atmosphere to the ground by snow hail or rain Once deposited on any vegetation radionuclides are removed from plants by the airstream and rain either through percolation or by cuticular wash The increase in biomass during plant growth does not cause a loss of activity but it does lead to a decrease in activity concentration due to effective dilution There is also systemic transport translocation of radionuclides within the plant subsequent to foliar uptake leading the transfer of chemical components to other parts of the plant that have not been contaminated directly

Radionuclide Contamination and Remediation Through Plants Dharmendra Kumar Gupta, Clemens Walther, 2014-07-14 This book focuses on the mechanistic microscopic understanding of radionuclide uptake by plants in contaminated soils and potential use of phytoremediation The key features concern radionuclide toxicity in plants how the radioactive materials are absorbed by plants and how the plants cope with the toxic responses The respective chapters examine soil classification natural plant selection speciation of actinides kinetic modeling and case studies on cesium uptake after radiation accidents Radionuclide contaminants pose serious problems for biological systems due to their chemical toxicity and radiological effects The processes by which radionuclides can be incorporated into vegetation can either originate from activity interception by external plant surfaces either directly from the atmosphere or from resuspended material or through uptake of radionuclides via the root system Subsequent transfer of toxic elements to the human food chain is a concrete danger Therefore the molecular mechanisms and genetic basis of transport into and within plants needs to be understood for two reasons The effectiveness of radionuclide uptake into crop plants so called transfer coefficient is a prerequisite for the calculation of dose due to the food path On the other hand efficient radionuclide transfer into plants can be made use of for decontamination of land so called phytoremediation the direct use of living green plants for in situ removal of pollutants from the environment or to reduce their concentrations to harmless levels

Man-Made and Natural Radioactivity in Environmental Pollution and Radiochronology Richard Tykva, Dieter Berg, 2004-01-31 The goal of this book is to examine the complex state of radioactivity in the environment and to understand the interplay of its two principal sources man made and natural The text examines human contributions to release of radionuclides with an eye to future reductions and assesses natural occurrences in an evaluation of baseline radioactivity

Food Safety J. P. Felix D'Mello, 2003 Food safety is a concern for scientists policy makers and

consumers especially as food poisoning outbreaks are becoming more common and as particular concerns arise over genetically modified foods This book covers recent developments in the chemistry biochemistry and physiological effects of toxicants that might have an impact on human health and welfare **Impacts of Emerging Contaminants and Their Ecotoxicological Consequences** Xuchun Qiu,Yuji Oshima,Kun Chen,Yohei Shimasaki,Yanhong Shi,2025-08-13 Emerging contaminants such as pharmaceuticals and personal care products PPCPs nanomaterials trace metals pesticides and microplastic are important factors that constrain productivity individual health reproduction and the ecosystem development of aquatic species The increasing number and diversity of emerging contaminants have shown multiple impacts on biological systems biodiversity and ecosystem functions which may finally lead to significant changes in populations and communities in aquatic environments In recent years many emerging pollutants in natural ecosystems have attracted widespread attention with the advances in detection and monitoring technologies Furthermore the adverse effects of emerging environmental pollutants particularly those that occur at environmentally relevant concentrations may appear only when they co occur with another stressor but knowledge about these impacts on aquatic species is still limited Thus more studies on the effects of those emerging environmental contaminants on aquatic organisms are critical to better assess their risk Radioactive Waste Processing and Disposal U.S. Nuclear Regulatory Commission,1980
