A Cultural-Historical Study of Children Learning Science Marilyn Fleer,Niklas Pramling,2014-10-01 This book moves beyond the traditional constructivist and social constructivist view of learning and development in science It draws upon cultural historical theory in order to theorise early childhood science education in relation to our currently globalised education contexts The book argues that concept development in science for young children can be better theorised by using Vygotsky's concept of Imagination and creativity Vygotsky's theory of play and his work on higher mental functions particularly the concept of inter and intrapsychological functioning Key concepts are extracted from the theoretical section of the book and used as categories for analysis in presenting evidence and new ideas in the second section of the book In this second part of the book the authors examine how science knowledge has been constructed within particular countries around the globe where empirical research in early childhood science education has occurred The third part of the book examines the nature of the encounter between the teacher and the child during science learning and teaching In the final part of the book the authors look closely at the range of models and approaches to the teaching of early childhood science that have been made available to early childhood teachers to guide their planning and teaching They conclude the book with a theoretical discussion of the cultural historical foundation for early childhood science education followed by a model of teaching scientific concepts to young children in play based settings including homes and community contexts

The Role of Imagination in STEM Concept Formation Marilyn Fleer,2022-06-20 Why has early childhood science education taken so long to become established as a field of research inquiry Why do we continue to blame early childhood and primary teachers for their lack of confidence and competence in science education This book tackles these questions and more Grounded in cultural historical theory this book explores the development of the field through the eyes of the author Over 30 years the contexts the questions and the foci of a generation of science education researchers are mapped As the field develops new concepts models of teaching and new methods and methodologies are theorised and

empirically supported bringing forward uniqueness of science education for children in play based settings
