Anthropologists and the Rediscovery of America, 1886-1965 John S. Gilkeson, 2010-09-20 This book examines the intersection of cultural anthropology and American cultural nationalism from 1886 when Franz Boas left Germany for the United States until 1965 when the National Endowment for the Humanities was established Five chapters trace the development within academic anthropology of the concepts of culture social class national character value and civilization and their dissemination to non anthropologists As Americans came to think of culture anthropologically as a complex whole far broader and more inclusive than Matthew Arnold's the best which has been thought and said so too did they come to see American communities as stratified into social classes distinguished by their subcultures to attribute the making of the American character to socialization rather than birth to locate the distinctiveness of American culture in its unconscious canons of choice and to view American culture and civilization in a global perspective **Color in the Classroom** Zoe Burkholder, 2011-10-05 Between the turn of the twentieth century and the Brown v Board of Education decision in 1954 the way that American schools taught about race changed dramatically This transformation was engineered by the nation's most prominent anthropologists including Franz Boas Ruth Benedict and Margaret Mead during World War II Inspired by scientific racism in Nazi Germany these activist scholars decided that the best way to fight racial prejudice was to teach what they saw as the truth about race in the institution that had the power to do the most good American schools Anthropologists created lesson plans lectures courses and pamphlets designed to revise what they called the race concept in American education They believed that if teachers presented race in scientific and egalitarian terms conveying human diversity as learned habits of culture rather than innate characteristics American citizens would become less racist Although nearly forgotten today this educational reform movement represents an important component of early civil rights activism that emerged alongside the domestic and global tensions of wartime Drawing on hundreds of first hand accounts written by teachers nationwide Zo Burkholder traces the influence of this anthropological activism on the way that teachers understood spoke and taught about race She explains how and why teachers readily understood certain theoretical concepts such as the division of race into three main categories while they struggled to make sense of more complex models of cultural diversity and structural inequality As they translated theories into practice teachers crafted an educational discourse on race that differed significantly from the definition of race produced by scientists at mid century Schoolteachers and their approach to race were put into the spotlight with the Brown v Board of Education case but the belief that racially integrated schools would eradicate racism in the next generation and eliminate the need for discussion of racial inequality long predated this Discussions of race in the classroom were silenced during the early Cold War until a new generation of antiracist

American Women During World War II Doris Weatherford,2009-10-16 American Women during World War II documents the lives and stories of women who contributed directly to the war effort via official and semi official military organizations as

well as the millions of women who worked in civilian defense industries ranging from aircraft maintenance to munitions manufacturing and much more. It also illuminates how the war changed the lives of women in more traditional home front roles. All women had to cope with rationing of basic household goods and most women volunteered in war related programs. Other entries discuss institutional change as the war affected every aspect of life including schools, hospitals, and even religion. *American Women during World War II* provides a handy one volume collection of information and images suitable for any public or professional library.

Democratizing the Enemy Brian Masaru Hayashi, 2010-12-16 During World War II some 120,000 Japanese Americans were forcibly removed from their homes and detained in concentration camps in several states. These Japanese Americans lost millions of dollars in property and were forced to live in so called assembly centers surrounded by barbed wire fences and armed sentries. In this insightful and groundbreaking work Brian Hayashi reevaluates the three year ordeal of interred Japanese Americans. Using previously undiscovered documents he examines the forces behind the U.S. government's decision to establish internment camps. His conclusion: the motives of government officials and top military brass likely transcended the standard explanations of racism, wartime hysteria, and leadership failure. Among the other surprising factors that played into the decision Hayashi writes were land development in the American West and plans for the American occupation of Japan. What was the long term impact of America's actions? While many historians have explored that question Hayashi takes a fresh look at how U.S. concentration camps affected not only their victims and American civil liberties but also people living in locations as diverse as American Indian reservations and northeast Thailand.

Generations of Women Historians Hilda L. Smith, Melinda S. Zook, 2018-07-11 This collection focuses on generations of early women historians seeking to identify the intellectual milieu and professional realities that framed their lives. It moves beyond treating them as simply individuals and looks to the social and intellectual forces that encouraged them to study history and at the same time would often limit the reach and define the nature of their study. This collection of essays speaks to female practitioners of history over the past four centuries that published original histories, some within a university setting and some outside. By analysing the values these early women scholars faced, readers can understand the broader social values that led women historians to exist as a unit apart from the career path of their male colleagues.

Divergent Jewish Cultures Deborah Dash Moore, S. Ilan Troen, 2008-10-01 Two creative centers of Jewish life rose to prominence in the twentieth century: one in Israel and the other in the United States. Although Israeli and American Jews share kinship and history drawn from their Eastern European roots, they have developed divergent cultures from their common origins, often seeming more like distant cousins than close relatives. This book explores why this is so, examining how two communities that constitute eighty percent of the world's Jewish population have created separate identities and cultures. Using examples from literature, art, history, and politics, leading Israeli and American scholars focus on the political, social, and memory cultures of their two communities, considering in particular the American Jewish challenge to diaspora consciousness and the Israeli

struggle to forge a secular national Jewish identity At the same time they seek to understand how a sense of mutual responsibility and fate animates American and Israeli Jews who reside in distant places speak different languages and live within different political and social worlds
