Shapes Of Knowledge From The Renaissance To The Enlightenment:

The Shapes of Knowledge from the Renaissance to the Enlightenment D.R. Kelley, R.H. Popkin, 2012-12-06 The original idea for a conference on the shapes of knowledge dates back over ten years to conversations with the late Charles Schmitt of the Warburg Institute What happened to the classifications of the sciences between the time of the medieval Studium and that of the French Encyclopedie is a complex and highly abstract question but posing it is an effective way of mapping and evaluating long term intellectual changes especially those arising from the impact of humanist scholarship the new science of the seventeenth century and attempts to evaluate to apply to reconcile and to institutionalize these rival and interacting traditions Yet such patterns and transformations cannot be well understood from the heights of the general history of ideas Within the eneral framework of the organization of knowledge the map must be filled in by particular explorations and soundings and our project called for a conference that would combine some encyclopedic as well as interdisciplinary and inter national breadth with scholarly and technical depth

The Genealogy of Knowledge Stephen Gaukroger, 2018-12-20 First published in 1997 this volume expands the analytical philosophical tradition in the face of parochial Anglo American philosophical interests The essays making up the section on Antiquity share one concern to show that there are largely unrecognised but radical differences between the way in which certain fundamental questions concerning the nature of number sense perception and scepticism were thought of in antiquity and the way in which they were thought of from the 17th century onwards Part 2 on early modern thought explores the theoretical characterisation of the role of experiment in early modern physical theory through Galileo s embracing of experiments along with Descartes automata and issues in a relatively neglected but especially intractable part of Descartes philosophy how he conceives of what a successful inference consists in and what it is that makes it successful The final section deals with the philosophical foundations of physical theory the distinction between the human and the natural sciences the philosophical cum scientific foundations of Marx s idea of socialism and Nietzsche s criticisms of the very notion of science concluding that Nietzsche s probing questions cannot be dismissed as he has opened up some genuinely challenging issues which we ignore at our peril

Social History of Knowledge Peter Burke, 2013-05-31 In this book Peter Burke adopts a socio cultural approach to examine the changes in the organization of knowledge in Europe from the invention of printing to the publication of the French Encyclop die The book opens with an assessment of different sociologies of knowledge from Mannheim to Foucault and beyond and goes on to discuss intellectuals as a social group and the social institutions especially universities and academies which encouraged or discouraged intellectual innovation Then in a series of separate chapters Burke explores the geography anthropology politics and economics of knowledge focusing on the role of cities academies states and markets in the process of gathering classifying spreading and sometimes concealing information The final chapters deal with knowledge from the point of view of the individual reader listener viewer or consumer including the problem of the reliability of knowledge discussed so

vigorously in the seventeenth century One of the most original features of this book is its discussion of knowledges in the plural It centres on printed knowledge especially academic knowledge but it treats the history of the knowledge explosion which followed the invention of printing and the discovery of the world beyond Europe as a process of exchange or negotiation between different knowledges such as male and female theoretical and practical high status and low status and European and non European Although written primarily as a contribution to social or socio cultural history this book will also be of interest to historians of science sociologists anthropologists geographers and others in another age of information explosion

The Science of Nature in the Seventeenth Century John A. Schuster, Peter R. Anstey, 2005-12-23 The seventeenth century marked a critical phase in the emergence of modern science But we misunderstand this process if we assume that seventeenth century modes of natural inquiry were identical to the highly specialised professionalised and ever proliferating family of modern sciences practised today In early modern Europe the central category for the study of nature was natural philosophy or as Robert Hooke called it in his *Micrographia* the Science of Nature In this discipline general theories of matter cause cosmology and method were devised debated and positioned in relation to superior disciplines such as theology cognate disciplines such as mathematics and ethics and subordinate disciplines such as the mixed mathematical sciences of astronomy optics and mechanics Thus the Scientific Revolution of the Seventeenth Century did not witness the sudden birth of modern science but rather conflict and change in the field of natural philosophy Aristotelian natural philosophy was challenged and displaced as thinkers competed to redefine natural philosophy and its relations to the superior cognate and subordinate disciplines From this process the more modern looking disciplines of natural science emerged and the idea of a general Science of Nature suffered a slow demise The papers in this collection focus on patterns of change in natural philosophy in the seventeenth century aiming to encourage the use and articulation of this category in the historiography of science The volume is intended for scholars and advanced students of early modern history of science history of philosophy and intellectual history Philosophers of science and sociologists of scientific knowledge concerned with historical issues will also find the volume of relevance Above all the volume is addressed to anyone interested in current debates about the origin and nature of modern science

Relationships in the Organization of Knowledge A. Bean, R. Green, 2013-04-17 Relationships abound in the library and information science LIS world Those relationships may be social in nature as for instance when we deal with human relationships among library personnel or relationships i e public relations between an information center and its clientele The relationships may be educational as for example when we examine the relationship between the curriculum of an accredited school and the needs of the work force it is preparing students to join Or the relationships may be economic as when we investigate the relationship between the cost of journals and the frequency with which they are cited Many of the relationships of concern to us reflect phenomena entirely internal to the field the relationship between manuscript collections archives and special collections the relationship between end user search

behavior and the effectiveness of searches the relationship between access to and use of information resources the relationship between recall and precision the relationship between various bibliometric laws etc The list of such relationships could go on and on The relationships addressed in this volume are restricted to those involved in the organization of recorded knowledge which tend to have a conceptual or semantic basis although statistical means are sometimes used in their discovery

Francis Bacon and the Refiguring of Early Modern Thought Catherine Gimelli Martin, 2017-05-15 Commemorating the 400th anniversary of the publication of Francis Bacon's *Advancement of Learning* 1605 this collection examines Bacon's recasting of proto scientific philosophies and practices into early modern discourses of knowledge Like Bacon all of the contributors to this volume confront an essential question how to integrate intellectual traditions with emergent knowledges to forge new intellectual futures The volume's main theme is Bacon's core interest in identifying and conceptualizing coherent intellectual disciplines including the central question of whether Bacon succeeded in creating unified discourses about learning Bacon's interests in natural philosophy politics ethics law medicine religion neoplatonic magic technology and humanistic learning are here mirrored in the contributors varied intellectual backgrounds and diverse approaches to Bacon's thought

Making Natural Knowledge Jan Golinski, 2008-07-22 Arguably the best available introduction to constructivism a research paradigm that has dominated the history of science for the past forty years *Making Natural Knowledge* reflects on the importance of this theory tells the history of its rise to prominence and traces its most important tensions Viewing scientific knowledge as a product of human culture Jan Golinski challenges the traditional trajectory of the history of science as steady and autonomous progress In exploring topics such as the social identity of the scientist the significance of places where science is practiced and the roles played by language instruments and images *Making Natural Knowledge* sheds new light on the relations between science and other cultural domains A standard introduction to historically minded scholars interested in the constructivist programme In fact it has been called the constructivist's bible in many a conference corridor Matthew Eddy *British Journal for the History of Science*

Human Sciences Jens Hoyrup, 2000-06-08 Offers historical and philosophical arguments for treating the humanities as sciences

Beyond Borders Néstor Herran, Tayra Lanuza-Navarro, Josep Simon, 2009-05-27 How does scientific knowledge circulate Does scientific communication shape the making of science Is the making of science a national endeavour or does it have an international or transnational dimension Are teaching and research equally relevant in this endeavour How can history of science react to the challenges posed by the changing practices of science in historical context *Beyond Borders* is a book generated at the heart of these fundamental questions In the last decades the history of science has attained a high degree of disciplinary maturity and sophistication However perception of disciplinary crisis is apparent behind calls for the search of new big pictures and their implementation in teaching and communicating the history of science to wider audiences Temporal and narrative fragmentation are seen as major drawbacks hindering the development of the discipline In addition

national linguistic and methodological division is increasingly afflicting its practice Like other areas in the humanities and in contrast to the sciences the history of science has nowadays a pronounced local character which clearly constrains its intellectual output Challenging this state of affairs is a major aim of this book which argues for a resolute call for intellectual and methodological pluralism and internationalism Through a broad diversity of subjects periods and geographies covering from studies of sixteenth century astrological texts to contextual analysis of twentieth century X ray spectroscopy this collection of papers and historiographical essays offers a fresh overview of the field and its major questions Beyond Borders revisits five major topics in history of science namely the early modern map of knowledge pedagogy and science science popularization science and the nation and the geography of scientific centres and peripheries Engaging with a broad diversity of historiographical and methodological approaches in an international perspective Beyond Borders is a rich and plural manifesto contributing to the reflective appraisal of history of science as a discipline

Branching Out: Botanical Metaphors and Worlding Art History from the 'Tropics' Miriam Oesterreich, 2025-05-13 This chapbook examines the aestheticization of plants in colonial discourses and charts visualizations of art histories that use the tree as a metaphor In doing so Miriam Oesterreich considers how tropicalized tree forms have been reappropriated to portray a more worlded art history In the mid twentieth century prominent visual artists including Miguel Covarrubias Alfred Barr and Ad Reinhardt featured trees of art as canonizing illustrations of Western art history Using Pablo Le n de la Barra s poster Diagrama Tropical Nova Cartografia Tropical 2010 as a starting point Branching Out discusses works by contemporary artists from Latin America and the Caribbean to look at the subversive potential in reimagining plant images and metaphors
