SharePoint 2003 User's Guide Seth Bates, Tony Smith, 2006-11-08 Microsoft SharePoint Portal Server 2003 and Windows SharePoint Services address a variety of information sharing and collaboration needs providing an innovative way for you to manage information In order to get the most out of SharePoint you need to understand its capabilities to create materials collaborate with others and share enterprise information Whether you re a beginner or an experienced SharePoint user SharePoint 2003 User s Guide is designed to provide you with the information you need to effectively use these tools The authors who are experienced SharePoint consultants take a real world look at the best practices for Microsoft SharePoint 2003 and include many detailed examples you can build on The first section of the book describes the basic and advanced building blocks in both of the SharePoint technologies With step by step examples the authors explain features like portals sites lists and libraries Advanced topics include targeting content managing security and integrating with Microsoft Office 2003 The second section expands on these features by showing you how to build the most commonly used SharePoint solutions The book describes the challenges these solutions are designed to address and the benefits that are realized by using a SharePoint based solution The authors provide specific instruction and examples that will allow you to effectively configure SharePoint for document collaboration information centers and other detailed scenarios **Data-Based Methods for Materials Design and Discovery** Ghanshyam Pilania, Prasanna V. Balachandran, James E. Gubernatis, Turab Lookman, 2022-05-31 Machine learning methods are changing the way we design and discover new materials This book provides an overview of approaches successfully used in addressing materials problems alloys ferroelectrics dielectrics with a focus on probabilistic methods such as Gaussian processes to accurately estimate density functions The authors who have extensive experience in this interdisciplinary field discuss generalizations where more than one competing material property is involved or data with differing degrees of precision costs or fidelity expense needs to be considered Use of a Time-shared Computer System to Control a Hall Effect Experiment W. Murray Bullis, United States. National Bureau of Standards, 1969 An experimental time shared computer system has been used to control and collect data from a Hall effect experiment In addition to selection of the voltage sequence and control of specimen current and magnetic flux directions the computer exerts positive control over the specimen temperature in accordance with a series of thermocouple voltages entered by the operator at the beginning of the run The interface circuitry is constructed from four general purpose modules and a single special purpose unit Details of the interface system and the programs used to control the experiment and to perform intermediate calculations are given It was found that the time shared system was well suited to control an experiment of this type The demands on the computer were essentially similar to those required by a human user interacting

in a conversational mode Substantial savings in time over manual data collection and reduction were realized a temperature run with 38 to 40 data points between 10 and 320 K could be completed in less than 4 hours *Challenges of Information Technology Management in the 21st Century* Information Resources Management Association. had the opportunity to promote and help build the open courseware program at the Massachusetts Institute of Technology MIT This program has made the teaching materials for all 2 000 subjects taught at MIT available on the Web for anyone anywhere to use anytime at no cost In countries where basic broadband was not available we shipped it in on hard drives and compact disks Its impact has been worldwide but it has surely had the greatest impact on the developing world I am also a trustee of a nonprofit organization named Ithaca that operates Journal Storage JSTOR and other entities that make scholarly information available at very low cost The culture of science has been international and open for centuries Indeed the scientific enterprise can only work when all information is open and accessible because science works through critical analysis and replication of results In recent years as some scientific data and especially technological data have increased in economic value frequently has caused us to be far less open with information than business and free enterprise require us to be Indeed the worldwide shift to what is known as open innovation is strengthening every day Finally since the end of World War II the realities of modern military conflict and now terrorism have led governments to restrict information through classification This is important but I believe that we classify far too much information The last thing we need today at the beginning of the twenty first century is further arbitrary limitations on the free flow of scientific information whether by policies established by governments and businesses or by lack of information infrastructure For all these reasons the international sharing of scientific data is one of the topics of great interest here at the National Academies and has been the subject of many of our past reports This is the primary reason why this symposium has been co organized by the NRC s Policy and Global Affairs Division the Board on International Scientific Organizations BISO and the Board on Research Data and Information BRDI The Case for International Sharing of Scientific Data A Focus on Developing Countries Proceedings of a Symposium summarizes the symposium

Big Data in Materials Research and Development National Research Council, Division on Engineering and Physical Sciences, National Materials and Manufacturing Board, Defense Materials Manufacturing and Infrastructure Standing Committee, 2014-10-22 Big Data in Materials Research and Development is the summary of a workshop convened by the National Research Council Standing Committee on Defense Materials Manufacturing and Infrastructure in February 2014 to discuss the impact of big data on materials and manufacturing The materials science community would benefit from appropriate access to data and metadata for materials development processing application development and application life cycles Currently that access does not appear to be sufficiently widespread and many workshop participants captured the constraints and identified potential improvements to enable broader access to materials and manufacturing data and metadata This report discusses issues in defense materials manufacturing and infrastructure including data ownership and access collaboration and exploitation of big data s capabilities and maintenance of data
