Burgess, 2014-05-15 Do sharks lay eggs or give birth to live young Do sharks sleep How long do they live How likely are shark attacks This book answers your questions

about some of nature's most misunderstood animals. Answering every conceivable question about sharks, authors Gene Helfman and George H. Burgess describe the fascinating biology, behavior, diversity, and there are more than 1,000 species worldwide and cultural importance of sharks, their close relationship to skates and rays, and their critical role in healthy ecosystems. Helfman and Burgess take readers on a round-the-world tour of shark habitats, which include oceans as well as lakes and even rivers as far up the Mississippi as St. Louis. They describe huge, ferocious predators like Great White and Tiger sharks, and species such as Basking and Whale sharks that feed on microscopic prey yet can grow to lengths of more than 40 feet. The mysterious and powerful Greenland shark, the authors explain, reaches a weight of 2,200 pounds on a diet of seal flesh. Small, less than 2-foot-long Cookiecutter sharks attack other sharks and even take a chunk out of the occasional swimmer. Despite our natural fascination with sharks, we have become their worst enemy. Many shark species are in serious decline, and a number are threatened with extinction as a result of overfishing and persecution.
