ignore bodily influences on our psychology from chemicals in the blood to bacteria in the gut and overlook the ways that the environment affects our behavior via factors varying from subconscious sights and sounds to the weather As a result we alternately overestimate our capacity for free will or equate brains to inorganic machines like computers But a brain is neither a soul nor an electrical network it is a bodily organ and it cannot be separated from its surroundings Our selves aren't just inside our heads they're spread throughout our bodies and beyond Only once we come to terms with this can we grasp the true nature of our humanity
