David Mech,2015-05-22 The interactions between apex predators and their prey are some of the most awesome and meaningful in nature displays of strength endurance and a deep coevolutionary history And there is perhaps no apex predator more impressive and important in its hunting or more infamous more misjudged than the wolf Because of wolves habitat speed and general success at evading humans researchers have faced great obstacles in studying their natural hunting behaviors The first book to focus explicitly on wolf hunting of wild prey *Wolves on the Hunt* seeks to fill these gaps in our knowledge and understanding Combining behavioral data thousands of hours of original field observations research in the literature a wealth of illustrations and in the e book edition and online video segments from cinematographer Robert K Landis the authors create a compelling and complex picture of these hunters The wolf is indeed an adept killer able to take down prey much larger than itself While

adapted to hunt primarily hoofed animals a wolf or especially a pack of wolves can kill individuals of just about any species But even as wolves help drive the underlying rhythms of the ecosystems they inhabit their evolutionary prowess comes at a cost wolves spend one third of their time hunting the most time consuming of all wolf activities and success at the hunt only comes through traveling long distances persisting in the face of regular failure detecting and taking advantage of deficiencies in the physical condition of individual prey and through ceaseless trial and error all while risking injury or death By describing and analyzing the behaviors wolves use to hunt and kill various wild prey including deer moose caribou elk Dall sheep mountain goats bison musk oxen arctic hares beavers and others *Wolves on the Hunt* provides a revelatory portrait of one of nature's greatest hunters
