Schoute, Peter A. Finke, Frank R. Veeneklaas, Henk P. Uno, 2005-12-08 In the policy arena as well as in the academic world a new challenge is having to deal with the global community We are increasingly aware that the world is linked through economy energy environment interactions We are increasingly aware at the same time that the emergence of the global community does not imply an integrated harmonious world rather it is a community where co tries regions of different interests and values face each other directly Global governance has to be achieved through actions of national governments under different motives and constraints We need to have an analytical tool that is capable of producing a global picture yet with detailed country resolution If the world is a better place now compared to 100 years ago in terms of p capita income this is due to the industrialization that continued throughout the 20th century We entered the 21st century knowing that the human aspiration that translates into ever increasing production may not be tenable in the long run Sustainability of the global community is at stake In contrast to inc mental decision making through the market mechanism that should lead to some optimal state under some assumptions such as perfect knowledge smooth movement of resources no externalities and so forth we need to have an a lytical tool to provide us with details of the future state of the world Long-term Prospects for the World Economy Organisation for Economic Co-operation and Development, 1992

Kindleberger, 1996-01-25 Charles Kindleberger's World Economic Primacy 1500 1990 is a work of rare ambition and scope from one of our most respected economic historians Extending over broad ranges of both history and geography the work considers what it is that enables countries to achieve at some period in their history economic superiority over other countries and what it is that makes them decline Kindleberger begins with the Italian city states in the fourteenth century and traces the changing evolution of world economic primacy as it moves to Portugal and Spain to the Low countries to Great Britain and to the United States addressing the question of alleged U S decline Additional chapters treat France as a perennial challenger Germany which has twice aggressively sought superiority and Japan which may or may not become a candidate for the role of number one Kindleberger suggests that the economic vitality of a given country goes through a trajectory that can usefully thought not precisely be compared to a human life cycle Like human beings the growth of a state can be cut off by accident or catastrophe short of old age unlike human beings however economies can have a second birth In World Economic Primacy Kindleberger takes into account the influence of complex historical social and cultural factors that determine economic leadership A brilliant overview of the position of nations in the world economy World Economic Primacy conveys profound insights into the causes of the rise and decline of the world's economic powers past and present
