Looking To Learn Visual Pedagogy At The University Of Chicago:

Looking to Learn Linda Seidel, Katherine Fischer Taylor, 1998 Looking to Learn an exhibition at the Smart Museum of Art at the University of Chicago challenges the decontextualized approach to images and learning by setting ritual functional and intentionally aesthetic objects side by side together with inventories technical viewing devices photographs of ceremonial practices deploying the objects printed materials representing them and records and fragments of some of the environments to which they have belonged The resulting installations probed the ways in which objects artifacts and images have been collected deployed and exhibited in teaching research and self representation from the earliest days at the University

Looking and Learning: Visual Literacy across the Disciplines Deandra Little, Peter Felten, Chad Berry, 2015-03-13 In this volume the authors focus on the importance of inclusive teaching and the role faculty can play in helping students achieve though not necessarily in the same way To teach with a focus on inclusion means to believe that every person has the ability to learn It means that most individuals want to learn to improve their ability to better understand the world in which they live and to be able to navigate their pathways of life This volume includes the following topics best practices for teaching students with social economic gender or ethnic differences adjustments to the teaching and learning process to focus on inclusion strategies for teaching that help learners connect what they know with the information presented environments that maximize learners academic and social growth The premise of inclusive teaching works to demonstrate that all people can and do learn Educators and administrators can incorporate the techniques of inclusive learning and help learners retain more information This is the 141st volume of the quarterly Jossey Bass higher education series New Directions for Teaching and Learning It offers a comprehensive range of ideas and techniques for improving college teaching based on the experience of seasoned instructors and the latest findings of educational and psychological researchers *The Practice of Persuasion* Keith Moxey, 2018-08-06 This sequel to *The Practice of Theory* stresses the continued need for self reflective awareness in art historical writing Offering a series of meditations on the discipline of art history in the context of contemporary critical theory Moxey addresses such central issues as the status of the canon the nature of aesthetic value and the character of historical knowledge The chapters are linked by a common interest in even fascination with the paradoxical power of narrative and the identity of the authorial voice Moxey maintains that art history is a rhetoric of persuasion rather than a discourse of truth Each chapter in *The Practice of Persuasion* attempts to demonstrate the paradoxes inherent in a genre that while committed to representing the past must inevitably bear the imprint of the present In Moxey's view art history as a discipline is often unable to recognize its status as a regime of truth that produces historically determined meanings and so continues to act as if based on a universal aesthetic foundation His new book should enable art historians to engage with the past in a manner less determined by tradition and more responsive to contemporary values and aspirations

Visual Processes in Reading and Reading Disabilities Dale M. Willows, Richard Kruk, Evelyne Corcos, 2012-12-06 Over the last 25 years reading processes have been the focus of an enormous amount of research in experimental psychology as well as in other disciplines The theories and models emerging from this research have greatly advanced understanding of both normal acquisition and of reading disabilities Although great progress has been made there are certain aspects that have been relatively neglected in the current understanding

Specifically the role of visual factors has received less attention than that of other component processes This is particularly surprising since reading and writing are distinct from the other language processes of speaking and listening in large part by virtue of the fact that a visual dimension is involved Relevant research is broadly scattered both geographically and in terms of disciplines and there have been no major reviews or books concerned with the visual dimension of reading and reading disabilities The purpose of this book is to bring together a broad range of evidence that concerns the role of visual information in reading and reading disabilities Because reading processes are of central interest to cognitive scientists neuropsychologists psycholinguists clinicians and educators this book should draw a very broad readership
