Loss of Biodiversity Sharon L. Spray, Karen Leah McGlothlin, 2003 Loss of Biodiversity introduces readers to the important concepts for understanding the environmental challenges and consequences of the declining diversity of life on the planet Contributions from scientists and academics in the social sciences and humanities provide readers with an initial tool kit for understanding the concepts central to their disciplinary perspective and the multi dimensional aspects of the loss of biodiversity

Loss of Biodiversity Rachael Hames, 2017-12-15 Biodiversity is the foundation for maintaining the balance between all living things When species begin dying out it upsets this delicate balance and can cause ecological tragedies Earth's rainforests are homes to vast biodiversity However the rainforests are also one of Earth's most threatened habitats There animals risk losing their homes through pollution and deforestation The information presented in this book highlights at risk animal and plant species and discusses ways readers can lessen their carbon footprint Colorful photographs of animals and habitats transport readers to distant locations where biodiversity takes center stage

Biodiversity Offsets Wolfgang Wende, Graham - M. Tucker, Fabien Quétier, Matt Rayment, Marianne Darbi, 2018-03-07 This book deals with the new concept of biodiversity offsets The aim of offsetting schemes is to achieve no net loss or even net gain of biodiversity Offsets obey a mitigation hierarchy and reflect the precautionary and polluter pays principle in regard to project impacts Readers gain insights into current debates on biodiversity policies with top experts outlining theoretical principles and the latest research findings At the same time the focus is on practical application and case studies Today there is a lively international discussion among practitioners and scientists on the optimal legal framework metrics and design of habitat banks to ensure the success of biodiversity offsets and to minimise the risks of failure or misuse Contributing to the debate this volume presents the activities and practices of biodiversity offsetting already implemented in Europe in selected EU member states and the lessons that can be learnt from them Readers may be surprised at how much experience already exists in these countries A further aim of the book is to offer grounded insights on the road ahead and foster a more intensive and fruitful discussion on how offsetting can be extended

and improved upon so that it becomes a key and effective component of Europe's biodiversity conservation policy framework

Biodiversity Loss Charles Perrings, 1997-01-28 This volume reports key findings of the Biodiversity Program of the Royal Swedish Academy of Sciences Beijer Institute. The program brought together a number of eminent ecologists and economists to consider the nature and significance of the biodiversity problem. In encouraging collaborative work between these closely related disciplines it sought to shed new light on the concept of diversity, the implications of biological diversity for the functioning of ecosystems, the driving forces behind biodiversity loss, and the options for promoting biodiversity conservation. The results of the program are surprising. It is shown that the core of the biodiversity problem is a loss of ecosystem resilience and the insurance it provides against the uncertain environmental effects of economic and population growth. This is as much a local as a global problem, implying that biodiversity conservation offers benefits that are as much local as global. The solutions as well as the causes of biodiversity loss lie in incentives to local users. Biodiversity and

Conservation: Causes and consequences of biodiversity loss 2 : pollution, climate change and unsustainable exploitation

Richard J. Ladle, 2009 Although biodiversity is a relatively new coinage, scientists have been studying the subject it describes long before the word's first appearance in the language in the mid 1980s. In 1973, for instance, the UK Systematics Association held a symposium on The Changing Flora and Fauna of Britain which concluded that not enough attention was being paid to the conservation of rarities; a conclusion also reached said the symposium at a meeting of the Linnean Society some forty years earlier. By 1980 the Global 2000 Report to the President published by the US Council on Environmental Quality starkly warned of a diminution of up to one fifth of all species by the turn of the century and there is now a growing consensus that the world faces a biodiversity crisis, a potentially catastrophic global loss of genetic ecosystem and most obviously species diversity. Indeed, especially since the UN Convention on Biological Diversity was promulgated in Rio de Janeiro in 1992, conserving biodiversity has become the principal focus of the global conservation movement. Indeed, the study of the origins, maintenance, and protection of diversity has become perhaps the most vibrant offshoot of ecology and conservation studies. It is increasingly taught and studied in universities and other research institutions around the world. Addressing the need for an authoritative reference work to make sense of this rapidly growing subject and its ever more complex and multidisciplinary corpus of scholarly literature, Biodiversity and Conservation is a new title in the Routledge series Critical Concepts in the Environment. Edited by Richard Ladle of Oxford University's Centre for the Environment, this new Major Work brings together in five volumes the foundational and the very best cutting edge scholarship to provide a synoptic view of all the key issues and current debates. The Ecological and Societal Consequences of Biodiversity Loss Michel Loreau, Andy Hector, Forest Isbell, 2022-03-15 The idea that changes in biodiversity can impact how ecosystems function has over the last quarter century gone from being a controversial notion to an accepted part of science and policy As the field matures it is high time to review progress explore the links between this new research area and fundamental ecological concepts and look ahead to the implementation of this knowledge This book is designed to both provide an up to date overview of research in the area and to serve as a useful textbook for those studying the relationship between biodiversity and the functioning stability and services of ecosystems The Ecological and Societal Consequences of Biodiversity Loss is aimed at a wide audience of upper undergraduate students postgraduate students and academic and research staff

Progress Towards Halting the Loss of Biodiversity by 2010 European Environment Agency, 2006 The continuing loss of biological diversity and its components genes species and ecosystems is an issue of global concern Research has shown that both the diversity and the identity of the various species have a fundamental influence on the magnitude and stability of the ecological processes that occur at the ecosystem level There are significant interrelationships between the degradation of ecosystems the loss of animal and plant species market globalisation and poverty Europe's high per capita consumption and waste production means that its impact on ecosystems is felt well beyond its own borders Biodiversity loss is inextricably linked to the degradation of the ecosystem services described by the 2005 Millennium Ecosystem Assessment

Biodiversity Loss in the 21st Century Neil Griffin, 2015-03-14 This book provides an overview of current knowledge and discusses some of the unanswered questions at the forefront of research in biodiversity Every ecosystem is an intricate organization of cautiously mixed life forms a dynamic

and primarily sensible system Hence their progressive decline may speed up climate change and vice versa influencing flora and fauna composition and distribution resulting in the loss of biodiversity The effects of climate change are the primary issues covered in this book It presents varied case studies focused on biodiversity evaluations and necessities in several ecosystems analyzing the current life situation of many life forms and covering various biogeographic zones of the world

The Root Causes of Biodiversity Loss Alexander Wood, Pamela Stedman-Edwards, Johanna Mang, 2013-11-05 The world is losing species and biodiversity at an unprecedented rate The causes go deep and the losses are driven by a complex array of social economic political and biological factors at different levels Immediate causes such as over harvesting pollution and habitat change have been well studied but the socioeconomic factors driving people to degrade their environment are less well understood This book examines the underlying causes It provides analyses of a range of case studies from Brazil Cameroon China Danube River Basin India Mexico Pakistan Philippines Tanzania and Vietnam and integrates them into a new and interdisciplinary framework for understanding what is happening From these results the editors are able to derive policy conclusions and recommendations for operational and institutional approaches to address the root causes and reverse the current trends It makes a contribution to the understanding of all those from ecologists and conservationists to

economists and policy makers working on one of the major challenges we face The Silent Footsteps: A Harrowing Tale of Biodiversity's Slow Fading Lori Nicholson, In a world teeming with life a subtle shadow lingers shaping the delicate balance of our planet As the human population continues to burgeon the threads of biodiversity begin to unravel Bound in intricate harmony ecosystems crumble under the weight of overpopulation Within these pages lies an exploration a testament to the fragile interplay between humanity and the natural world Venture into the depths of this captivating journey and witness the repercussions of our ever growing numbers Brace yourself for eye opening revelations as we delve into the myriad domino effects caused by population growth From the towering expanse of verdant rainforests to the enchanting chorus of tropical reefs biodiversity exemplifies the extraordinary beauty of our shared planet Yet with each passing day this vital tapestry faces unprecedented threats Alongside esteemed researchers impassioned conservationists and unwavering activists you will discover the intricate web of life upon which we all rely Observing the disheartening decline of countless species this chronicle offers a poignant wakeup call illuminating the devastating consequences of overpopulation Unlocking a deeper understanding profound insights lay bare the intimate relationship between burgeoning human populations and the diminished biodiversity they leave in their wake **Biodiversity and Ecosystem Insecurity** Ahmed Djoghla, Felix
