Teaching Young Children: Choices In Theory And Practice Mac Naughton, Glenda, Williams, Gillian, 2008-11-01 This book presents early childhood students and staff with a broad and diverse range of teaching techniques to support children's learning. It examines 26 techniques ranging from simple ones such as describing and listening to more complex methods such as deconstruction and scaffolding. The strategies selected are derived from the best current research knowledge about how young children learn. A detailed evaluation of each strategy enables childcare staff, early childhood teachers and students to expand their repertoire of teaching strategies and to critically evaluate their own teaching in early childhood settings. Vignettes and examples show how early childhood staff use the techniques to support children's learning and help to bring the discussion of each technique to life. Revised and updated in light of the latest research, new features include: Coverage of the phonics debate; Addition of ICT content; Questions for further discussion; Revision to the chapter on problem solving; Updated referencing throughout. *Teaching Young Children* is key reading for students and experienced early childhood staff working in diverse settings with young children.

Tiny Tots and Tender Hearts R. V. Kumar, 2013-12-30 *Tiny Tots and Tender Hearts* explains the basics of heart diseases in children. Although there are chapters devoted to this subject in other books, but the general and individual aspects are not given in depth. Besides, there is no source book for paramedicals, parents and relatives of patients to understand such a complicated topic. Awareness helps cope better and this book answers questions like how congenital heart defects are formed, why they are formed, when to suspect, how doctors confirm and related issues like psychological aspects, lifestyle after surgery etc. The book is well illustrated with more than 150 colour images and diagrams and the language has been kept simple with no technical jargon. The present book is useful for doctors involved in the study of children's heart disease, final year MBBS, MD pediatrics and MD General Medicine students, nurses, technicians, counselors involved in children's heart care and parents and relatives of children suffering from heart diseases.

people who have always wished to have a garden of their own But perhaps due to lack of space outdoors or maybe a lack of chance to get an opportunity to start gardening they have not managed to start up on this soul satisfying activity until now Somewhere in the 1850s up to the 1900s children were encouraged in schools to grow gardens under the close supervision of their teachers That is because it was taken for granted that there was plenty of land outside where gardening could be taught to the tiny tots and thus they could learn all about the delights of gardening outbuildings at a very young age For many of these children gardening became a pleasant activity when they grew up because they were so used to doing things in the garden since childhood But as time went by and school curriculums changed teachers began to concentrate more on teaching children ABC s and 123 s rather than encouraging them in outdoor activities Outdoor activities began to be restricted only to physical training classes and exercises and gardening took a backseat At home these children probably did not learn anything about gardening because their own family members did not have any interest in grubbing in the soil In fact even today if a city child who has never been exposed to gardening is taken into a garden given a trowel or three pronged fork and told to dig in the mud he might consider it to be a very messy business
