Monoamine Oxidase Basic And Clinical Aspects:

Monoamine Oxidase Hajime Yasuhara, S. H. Parvez, 1993-01-01 Monoamine oxidase MAO a mitochondrial enzyme which metabolizes monoamines in both the central nervous system and peripheral tissues plays an important role in the regulation of neuronal activities by controlling the concentrations of monoamines During the past three decades the enzymological properties of MAO have been studied extensively The most exciting and important advances in these studies have been the determination of the nucleotide sequence coding two forms of human MAO MAO A and MAO B and the involvement of MAO in potent dopaminergic neurotoxicity of MPTP which had led to the acceleration of aetiological studies of Parkinson s disease Other aspects of MAO studies have been the application of selective and safe MAO inhibitors in the treatment of depression and Parkinson s disease as well as the correlation between MAO and several psychiatric and neurodegenerative disorders

Monoamine Oxidases and their Inhibitors, 2011-10-05 Published since 1959 International Review of Neurobiology is a well known series appealing to neuroscientists clinicians psychologists physiologists and pharmacologists Led by an internationally renowned editorial board this important serial publishes both eclectic volumes made up of timely reviews and thematic volumes that focus on recent progress in a specific area of neurobiology research In this volume invited experts provide authoritative reviews on various aspects of Monoamine Oxidase and its Inhibitors Leading authors review state of the art in their field of investigation and provide their views and perspectives for future research Chapters are extensively referenced to provide readers with a comprehensive list of resources on the topics covered All chapters include comprehensive background information and are written in a clear form that is also accessible to the non specialist **The Brain and Its Self** Joseph Knoll, 2005-10-14 The main message of this monograph is that the appearance of the mammalian brain with the ability to acquire drives ensured the development of social life and eventually led to the evolution of the human society This most sophisticated form of organized life on earth is still in the trial and error phase of its development It seeks to outgrow the myth directed era of its history and come to its final state the rationally directed human society

Neurochemical Markers of Degenerative Nervous Diseases and Drug Addiction G. a. Qureshi, 1998-03 **MAO - The Mother of all Amine Oxidases** John P.M. Finberg, Moussa B.H. Youdim, Peter Riederer, K.F. Tipton, 2013-12-01 Monoamine oxidase MAO is linked to psychiatric and neurological disorders because inhibitors of the enzyme are used clinically for treatment of affective disorders and Parkinson s disease One of the interesting new aspects of MAO is the occurrence in the human population of deletions of genes coding for one or the other enzyme subtype A or B This leads to the possibility of a genetic basis for psychiatric disorders based on MAO Subjects with deletions of type A or B and combined deletions have been described In the first group of 6 papers in this book the occurrence and characterization of these phenotypes as well as the structure of MAO genes is explored Advances in the biochemistry of MAO subtypes and their physiological function and localization in brain and periphery is included Other sections of the book deal with the neuroprotective action of MAO

inhibitors and their pharmacology especially the pharmacology of new MAO B inhibitors

On the Psychobiology of Personality Robert M Stelmack, 2004-11-12 Zuckerman received his Ph D in psychology from New York University Graduate School of Arts and Science in 1954 with a specialization in clinical psychology After graduation he worked for three years as a clinical psychologist in state hospitals in Norwich Connecticut and Indianapolis Indiana While in the latter position the Institute for Psychiatric Research was opened in the same medical center where he was working as a clinical psychologist He obtained a position there with a joint appointment in the department of psychiatry This was his first interdisciplinary experience with other researchers in psychiatry biochemistry psychopharmacology and psychology His first research areas were personality assessment and the relation between parental attitudes and psychopathology During this time he developed the first real trait state test for affects starting with the Affect Adjective Check List for anxiety and then broadening it to a three factor trait state test including anxiety depression and hostility Multiple Affect Adjective Check List Later positive affect scales were added Toward the end of his years at the institute the first reports of the effects of sensory deprivation appeared and he began his own experiments in this field These experiments supported by grants from NIMH occupied him for the next 10 years during his time at Brooklyn College Adelphi University and the research labs at Albert Einstein Medical Center in Philadelphia This last job was his second interdisciplinary experience working in close collaboration with Harold Persky who added measures of hormonal changes to the sensory deprivation experiments He collaborated with Persky in studies of hormonal changes during experimentally hypnotically induced emotions During his time at Einstein he established relationships with other principal investigators in the area of sensory deprivation and they collaborated on the book Sensory Deprivation 15 years of research edited by John Zubek 1969 His chapter on theoretical constructs contained the idea of using individual differences in optimal levels of stimulation and arousal as an explanation for some of the variations in response to sensory deprivation The first sensation seeking scale SSS had been developed in the early 1960 s based on these constructs At the time of his move to the University of Delaware in 1969 he turned his full attention to the SSS as the operational measure of the optimal level constructs This was the time of the drug and sexual revolutions on and off campuses and research relating experience in these areas to the basic trait paid off and is continuing to this day in many laboratories Two books have been written on this topic Sensation Seeking Beyond the Optimal Level of Arousal 1979 Behavioral Expressions and Biosocial Bases of Sensation Seeking 1994 Research on sensation seeking in America and countries around the world continues at an unabated level of journal articles several hundred appearing since the 1994 book on the subject
