Numerical Simulation In Tunneling:

Numerical Simulation in Tunnelling Gernot Beer, 2012-12-06 For many years the Austrian tunneling industry has demanded that research is urgently required to establish a theoretical basis for the New Austrian Tunneling Method and to assist site engineers in the often difficult day to day decisions In particular it was felt that numerical models need to be improved considerably in order to be able to act as useful tools in predicting soil rock mass behavior during tunneling The required improvement not only refers to the quality of the models but also to their ease of use As long as an experienced modeler is required to spend days in preparing the input and in interpreting the results the models will not be useful at the tunnel site It is heartening therefore that a group of scientists in Austria has come together to attempt to tackle this challenging task The initiative has been supported in a number of ways by the Austrian tunneling industry All Austrian companies associated with tunneling sent representatives to the management advisory board which ensured that the research carried out in the project was of benefit to the industry The Austrian Geomechanics Society sponsored the project with a considerable amount which was mainly used to cover site costs HL AG and OSAG as well as the joint ventures allowed access to tunnel sites thereby making it possible to test new developments [Proceedings of Geotechnical Challenges in Mining, Tunneling and Underground Infrastructures](#) Amit Kumar Verma, Edy Tonnizam Mohamad, Ramesh Murlidhar Bhatawdekar, Avtar Krishen Raina, Manoj Khandelwal, Danial Armaghani, Kripamoy Sarkar, 2022-06-03 This book consists of selected papers presented at the International Conference on Geotechnical Challenges in Mining Tunneling and Underground Infrastructures ICGMTU held as a virtual conference on December 20 2021 The papers represent the research work in the related fields of underground mining ground control mining geotechnics geo instrumentation mine tunnelling and underground structures It focuses on the latest technology being implemented including artificial intelligence and machine learning applications to solve challenges in mining tunneling and geotechnical structure engineering It also highlights the state of the art technologies adopted by the civil and mining industry for their commercial as well as environmental benefits The papers are presented by an international pool of academics research scientist and industrial experts and therefore cater to the global audience from the field of underground engineering **Coal and Rock Dynamic Disasters: Advances of Physical and Numerical Simulation in Monitoring, Early Warning, and Prevention - Volume II** Jingjing Meng, Jia Lin, M.
