Dietary Intake and Cardiovascular Risk Factors William R. Harlan,1983 Attention is directed towards possible associations between nutritional variables and coronary artery disease risk factors based on data developed during the first US National Health and Nutrition Examination Survey 1971 75 Relative body weight weight height squared was determined to be an important predictor of serum cholesterol and urate levels and of blood pressure levels in US adults This predictor together with age and sex accounted for most of the explained variance Dietary variables based on results from 24 hours recall or on a food frequency questionnaire did not influence serum cholesterol or urate levels Alcohol intakes however correlated directly with serum urate level Serum Ca and Mg levels and serum glutamic oxalacetic transaminase were found to be directly and independently related to serum cholesterol and urate which were also related to each other Other positive and negative influences on serum cholesterol and urate levels are discussed Summarized data concerning this study are provided

Nutrition and Cardiovascular Disease Ruth Johnsson Hegyeli, 1983 Abstract Containing the papers developed by Italian and U S participants during 1981 in a follow up of the U S Italy Joint Symposium on Nutrition and Cardiovascular Diseases in Rome Italy on December 5 6 1980 this volume focuses on prevention of cardiovascular disease through the control of risk factors such as hyperlipidemia hypertension and smoking Based upon epidemiological observations spanning 40 years and experimental and clinical studies with animals and humans the papers review the roles of lipoproteins in cardiovascular diseases and the manner in which diet relates to hypertension Also discussed are programs targeted for the prevention of coronary heart disease via dietary intervention Dietary regulation of lipoproteins and their relationship to body fatness and their relationship to atherosclerosis are also reviewed Coronary heart diseases relationship to specified elements in the diet and water as well as hypertension s interrelationships with sodium kidney extracellular fluid volume and CNS are among explored issues Beginning with an historic overview of the Seven Countries Study and some problems in methodology associated with international epidemiological investigations this volume concludes with studies geared for human kind s prevention of all coronary heart disease jb

Nutrition and Heart Disease H.K. Naito, 2012-12-06 Entering the 1980 s coronary heart disease CHD still remains the major cause of death in the United States and ranks second in the world in terms of CHD mortality rates However CHD mortality and morbidity rates in the United States have declined significantly since the 1950 s There are many reasons for this positive and encouraging change one of which is the increasing awareness of the importance of the role of nutrition in health and disease Diet has been identified as an important factor contributing to hyperlipidemia in individuals and populations Dietary modification has become a routine means of treating patients with lipid disorders The relationship between diet and chronic disease is however far from simple and at the present time needs further intensive research Many significant advances have recently taken place in our understanding of the effect of different nutritional components on blood lipids and lipoproteins and on the initiation progression and regression of atherosclerotic processes This symposium The 19th annual meeting of the American College of Nutrition Cardiovascular Disease and Nutrition held at Bloomington Minn on June 1 2 1978 addressed many of the important questions concerning the association of diet and CRD We have not restricted the topic to hyperlipidemia and CHD per se but have considered cardiovascular disease in general This monograph should be of interest to the dietitian nutritionist pediatric clinician cardiologist physicians in general and researchers in the field of cardiovascular disease Herbert K Naito Ph D
