Explaining Physics With The Help Of Toys Igor Kulaga, 2022-06-09 The main task of the initial period of studying physics is inculcating the interest and enthusiasm of children in this subject. The root cause of all interest is surprise, and for children there is almost nothing more surprising than a new and unusual toy. There is a whole class of toys with unusual mechanisms, behaviour, or way of interacting with them. Having explained to the child the not quite ordinary and often paradoxical properties of such toys, we can gradually instil in him an interest in physics as one of the most important sciences about the nature of the surrounding world. The main purpose of the book is to arouse interest in the study of physics with the help of toys that everyone has loved since childhood. The book contains descriptions of the toys in which, with the help of explanations of the devices and principles of operation, the basic physical laws are revealed together with perspectives of phenomena and patterns, practical significance as well as historical information. The individual descriptions contain the minimum necessary mathematical calculations as well as information of environmental, statistical, and household orientations. All toys are systematized according to 4 chapters: Mechanics, Liquids and Gases, Electricity and Optics. To a large extent, self-production of simple scientific toys can increase interest and enthusiasm in the process of teaching physics. To this end, the fifth chapter provides step-by-step instructions for making 14 such homemade toys from the most affordable materials using the simplest tools. The participation of teachers or parents in the process of making these toys by young children will undoubtedly provide positive emotions and establish trusting relationships.

Programming for the Puzzled Srinivas Devadas, 2017-11-03 Learning programming with one of the coolest applications around: algorithmic puzzles ranging from scheduling selfie time to verifying the six degrees of separation hypothesis. This book builds a bridge between the recreational world of algorithmic puzzles (puzzles that can be solved by algorithms) and the pragmatic world of computer programming, teaching readers to program while solving puzzles. Few introductory students want to program for programming's sake. Puzzles are real-world applications that are attention-grabbing, intriguing, and easy to describe. Each lesson starts with the description of a puzzle. After a failed attempt or two at solving the puzzle, the reader arrives at an Aha moment: a search strategy, data structure, or mathematical fact, and the solution presents itself. The solution to the puzzle becomes the specification of the code to be written. Readers will thus know

what the code is supposed to do before seeing the code itself This represents a pedagogical philosophy that decouples understanding the functionality of the code from understanding programming language syntax and semantics Python syntax and semantics required to understand the code are explained as needed for each puzzle Readers need only the rudimentary grasp of programming concepts that can be obtained from introductory or AP computer science classes in high school The book includes more than twenty puzzles and more than seventy programming exercises that vary in difficulty Many of the puzzles are well known and have appeared in publications and on websites in many variations They range from scheduling selfie time with celebrities to solving Sudoku problems in seconds to verifying the six degrees of separation hypothesis The code for selected puzzle solutions is downloadable from the book s website the code for all puzzle solutions is available to instructors
