Narrow, 1979 **Patient Education and Its Effect on the Nursing Practice and Patient Care** Peace Uhegwu, 2013 Based on recent studies patient education has become an important topic that has risen within society as a way to increase patient self management within patient care More patients have left ignorant to their condition and have no idea of self management after discharge which leads to frequent visits from the same patients With the study it analyzes the benefits of patient education through different conditions In addition the study also recognizes how important it is for nurses to expand their

knowledge within the practice Throughout the study the idea of patient education is a rising item within healthcare In addition different theories have been recognized but according to Dorothea Orem s theory she believed that patients must participate in the practice of activities that the individuals initiates and perform on their own behalf in maintaining life health and well being Therefore the purpose of the patient education is to help patients fall in the habit of taking initiative in self management and also help nurses take advantage of learning new ways of educating patients about the importance of their conditions to prevent errors within healthcare which seems to be a major problem Patients and family members should be educated about their condition and ways to initiate care after being discharged In the project a new policy will be created in order to initiate change within each unit of the healthcare system The nurse leaders will call meetings that will explain the purpose of patient education in depth through various levels of teaching tools that will allow each nurse to personally explain how they feel about the idea presented before them In addition the nurse leaders in charge after accepting a unanimous agreement to continue on will later on present the idea of directors of nursing who will have a lasting effect on how the hospital will accept the change A study was introduced about patients who were paralyzed and their benefits of self care through patient education The study accessed ten patients and educated 5 out of 10 of them The Running head Constructing the Written Evidence Based Proposal 3 five that were thoroughly educated were able to take care of themselves after being discharged while those who were not educated completely were left in the dark about ways to help and improve their condition
