Di Loreto, 2017-07-12 This book details the first comparative study under controlled conditions of the three major schools of psychotherapy client centered therapy behavioral or systematic desensitization therapy and rational emotive therapy The study was organized to compare the effectiveness of these distinct forms of counseling with two distinct personality types introverts and extroverts in the treatment of two specific homogeneous problems interpersonal anxiety and general anxiety The study was reviewed by experts representing each of the schools of thought and critiques are included as part of the total book Each school of therapy was evaluated to determine which was most effective with what type of subject In this study client centered therapy proved to have the best results in reducing anxiety with extroverts while the rational emotive approach worked best with introverts The therapy that had the greatest breadth in terms of effectiveness for both kinds of clients was systematic desensitization This remarkable study should have far reaching influence in the practical use of psychotherapy and is essential reading for all professionals and psychology students who plan to enter the area of counseling Instructors can use this book as a basic text or as a supplement to all introductory courses in clinical or counseling psychology offered at the senior graduate level *Integrating Scientific Disciplines* William Bechtel, 2012-12-06 Interdisciplinary research has been a popular idea with many people in the last 20 years Academic administrators have admonished their faculty to become more interdisciplinary Students often request the chance to pursue an interdisciplinary degree While the issue of managing interdisciplinary projects has received a fair amount of attention by those interested in science management interdisciplinary research has received little attention from historians philosophers or sociologists of

science or from scientists themselves Yet there are a number of cases within the life sciences where researchers have been actively engaged in endeavors that take them across disciplinary boundaries These are ripe for investigation by those interested in the process of science To provide an in depth study of some historical or contemporary cases of cross disciplinary research activity in the life sciences a conference was held at Georgia State University in May 1984 This conference was supported by the National Endowment for the Humanities U S A through their research conference program Over a three day period historians philosophers and researchers who were actively engaged in various of the life sciences discussed specific examples of interdisciplinary research and tried to analyze what was needed for successful crossing of disciplinary boundaries After the conference each of the participants revised their original presentations partly in light of the discussion at the conference The papers in this volume are the fruits of that endeavor

International Review of Research in Mental Retardation ,1968 International Review of Research in Mental Retardation *Unobtrusive Measures* Eugene J. Webb,2000 Thirty five years ago the four authors of this book addressed the problem of validity in social science research This revised edition builds on the earlier version s drive to justify novel techniques of survey and archival research Richly illustrated throughout the purpose of this book is to authorize and motivate ingenuity in obtaining information The authors combine very different methods so that research results can withstand the threats to validity which so frequently invalidate single measure conventional research

Problem Solving and Intelligence Helga A. H. Rowe,2024-03-08 Originally published in 1985 Problem Solving and Intelligence was the result of the author s efforts to understand the nature of human intelligence and the differences in the cognitive functioning of individuals which we observe again and again The book contains two types of material First it presents an overview of major contributions to the conceptualization and investigation of problem solving and intelligence which was derived from the extensive largely non cumulative literature at the time Second it reports a comprehensive empirical study of the manifestation of intelligence in problem solving The subject matter was at the interface of three traditional areas of psychological inquiry namely the study of cognitive processes individual differences and the characteristics of the stimulus What was innovative is that intellectual performance is investigated in relation to the simultaneous operation of variables from these dimensions The book was intended primarily as a contribution to the understanding and investigation of the nature of intelligent behavior as well as an introduction to intelligence and problem solving Today it can be read and enjoyed in its historical context

The Nature of Intelligence Lauren B. Resnick,2024-03-08 In the 1960s and early 1970s converging scientific and social movements had generated increasing concern over the meaning of the term intelligence Traditional definitions rooted in the history of intelligence testing and school selection practices had come under challenge as experimental psychology turned increasingly to the study of human cognitive processes and as understanding of the influence of culture on patterns of thinking grew Originally published in 1976 the theme of the book is an examination of cognitive and adaptive processes involved in intelligent behavior and a look at how these processes might be related to tested intelligence The book contains sections on intelligence from the psychometric viewpoint computer simulations of intelligent behavior studies of intelligence as social and biological adaptation and intelligence analyzed in terms of basic cognitive processes In a number of the chapters the constructs and methods of modern information processing psychology are used in their analyses of intelligence As the reader will discover the divisions of the book do not necessarily represent competing viewpoints but rather multiple windows on the phenomenon of human intelligence Today it can be read and enjoyed in its historical context

The Self-concept: A review of

methodological considerations and measuring instruments Ruth C. Wylie, 1974-01-01 This first volume of two in the revised and greatly expanded edition of Professor Wylie's now classic work describes and evaluates measurement methods, research designs and procedures which have been or might appropriately be used in self-concept research. Offering comprehensive treatment of the voluminous recent literature in the field, it constitutes a unique and invaluable guide to scholars and students of self-theories and self-concept research. Many of the methodological issues considered here also have broader relevance for personality research and theory.

Behavior Therapy with Children II Anthony M. Graziano, 2008-10-01 The term behavior modification refers to the systematic analysis and change of human behavior and the principal focus is on overt behavior and its relationships to environmental variables. Behavior modification can be applied in many settings, the nature of which helps to define its subsets. Thus applied in clinical settings toward clinical goals, it encompasses the subset behavior therapy. In *Behavior Therapy with Children Volume 2*, Anthony M. Graziano focuses on behavior therapy specifically, the behavioral treatment of children's clinical problems. The field of behavior modification encompasses an astonishingly wide and varied spectrum of concepts about and approaches to education, clinical problems, social programming and rehabilitation efforts. A conceptually and technologically rich medium, it has been nourished by the psychology laboratory, the school and the psychiatric clinic. It is an area with diffuse boundaries surrounding a highly active center within which apparently solid landmarks have already been worn away by the dissolving action of corrective self-criticism, immeasurably aided by the catalysts stirred in by the field's many critics. The activity continues: the dynamic field boils and the medium enriches itself. There appears to be a tendency, particularly among new behavior therapists, to limit their focus too narrowly to the client's systems of overt behavior. In this project, psychological therapy begins with a personal, interactive social situation in which the generally expected human response of interest, sympathy and support is the minimum condition. Graziano maintains that these clinical sensitivity skills must be preserved in behavior therapy and enhance its important contribution to advancing the therapeutic endeavor. Anthony M. Graziano is professor emeritus in the Department of Psychology, State University of New York at Buffalo. He has published a number of articles in journals on subjects such as teaching machine programs, behavior therapy with children, diagnostic testing, the history of psychology and evaluations of the contemporary mental health professions. He has been on the editorial board of *Behavior Modification* and on the board of directors for the Eastern Psychological Association.

Learning Mechanisms in Smoking William Alvin Hunt, William Hunt, Psychologists have spent thousands of years studying the learning processes of the white rat, yet until recently they have

neglected the laboratory of everyday social behavior for studying learning in man In this book the leading experts in learning theory and pharmacology examine the role of learning mechanisms in smoking The results provide new insights into the study of learning and determine new directions for future research on smoking and its control Two opening essays establish the framework for the volume One is a thorough review of research on controlling smoking behavior and the other is a review of findings on the personality of the smoker and the non smoker A second part includes four essays The first discusses the role played by habit in smoking defining habit in terms of fixed behavior patterns over learned to the point of becoming automatic and marked by decreasing awareness and increasing dependency on secondary rather than primary reinforcement The second discusses mechanisms of self control concentrating on humiliation or the realization of membership in an ethically repugnant class as one typical means of achieving such control The third is an excellent statement of the reinforcement position and the fourth discusses the role of nicotine as an addictive agent Part three presents the views of sociologists on smoking behavior and goes on to discuss the effects of prolonged alcohol ingestion on the eating drinking and smoking patterns of chronic alcoholics In its new approach to the study of smoking and learning behavior this book is of continuing interest to psychologists psychiatrists medical doctors public health officers teachers anyone interested in the scientific study and practical control of smoking behavior It is valuable collateral reading for courses in experimental psychology social psychology and health education on both the undergraduate and graduate levels William A Hunt 1903 1986 was professor of psychology at Loyola University Chicago He was also chairman of the Department of Psychology at Northwestern University During World War II he headed the Navy s clinical psychology program He has served as a member of the Medical Advisory Group to the Administrator of Veterans Affairs the Army s Scientific Advisory Panel and the Community Research and Resources Panel of the National Institutes of Mental Health as well as being for many years a consultant to the Surgeons General of both the Army and Navy
