Birren, 2013-10-22 *Handbook of the Psychology of Aging* Third Edition describes the psychology of adult development and aging. This book is organized into four parts encompassing 28 chapters that cover the basic behavioral changes and capacities occurring with advancing age. The first part deals with the history, concept, and models of the psychology of aging. This part also examines the distinctions between physical, biological, psychological, and social time or age. The second part explores the influences of racial, ethnic, and cultural factors on biological, health, social, and psychological aging processes. This part also surveys gender differences in aging. The third part describes numerous behavioral processes, changes, and patterns in advancing age. This part specifically considers the motivation, cognitive, and motor performance, attentional processes, learning, memory, personality, and wisdom in aging. The fourth part focuses on the applications of the concepts and principles of aging to the individual and society. This book will be of great value to psychologists, researchers, and graduate students.

**Aging and Older Adulthood** Joan T. Erber, 2019-10-07. Reflects the most important theoretical foundations and research directions concerning aging and older adulthood. This authoritative volume provides the latest insights into and theoretical interpretation of our understanding of the human aging process. Newly updated and revised, this edition of the well-established student textbook offers relatable scenarios that touch upon real-world issues faced by older adults and their families. The book explains how research studies attempt to answer questions of both theoretical and practical importance as they relate to aging and older adulthood and it explains the hypotheses and findings of the studies in a manner that is comprehensible to readers of all levels of research experience. *Aging and Older Adulthood* begins by describing the demographic characteristics of the older population and follows with a chapter on theoretical models that apply to the study of adult development and aging, as well as approaches commonly taken to conduct research and ethical concerns involved in the study of this group. It then offers a series of chapters exploring biological aging, sensation, perception, and attention, memory, intellectual functioning, cognition, and real-world problem solving, personality, and coping, social interaction, and social ties, lifestyles, and retirement, mental health, and psychotherapy, and death and bereavement. The final chapter looks at aging in the future. Each chapter includes fully updated research findings, as well as new and expanded coverage of concepts and ideas in areas such as neuroscience and diabetes. New edition of a highly respected text exploring our contemporary understanding of a broad range of topics related to older adulthood and the psychology of aging. Costa, I.C. Siegler, 2003-12-10 Recent Events in the Psychology of Aging documents the successful integration of aging into the mainstream of psychology Leading psychologists present overviews of the key issues and research findings on mainstream topics These include cognitive neuroscience visual attention learning memory and cognition as well as personality and happiness The intersection of aging content with mainstream psychology is also prominent in the areas of emotions personality and social psychology as seen in the chapters on subjective well being emotional development self esteem and personality trajectories The seven chapters of this book offer information on such topics as the seven sins of memory categorizing the common breakdowns of memory in everyday life and the special breakdown of sins that increase with aging problems with attention and learning and offers answers to questions such as do emotions get blunted with age do older people focus more on positive feelings and the age old question of whether older people are happier than younger people is given in the chapter on the evolving concept of subjective well being and the multifaceted nature of happiness Questions about what occurs to one's self esteem and personality are also masterfully discussed and the answers may be surprising The concluding seventh chapter provides a cultural lens on the biopsychosocial study of aging Psychology of Aging Aimee Spector, 2017-03-02 The psychology of aging is an exciting and rapidly developing field This volume provides a collection of classic original and often widely cited papers including some older papers which may be hard to find through conventional searches Taken together they help to address some key questions what are the cognitive changes related to aging Is mental exercise useful To what extent might intelligence education or stimulating mental activities delay or even reduce cognitive

symptoms of dementia However the book goes well beyond cognition and addresses social and emotional changes in aging as well as looking at how lifestyle factors may be influential in psychological functioning The section on the psychology of dementia covers the evolving psychological models plus innovative types of psychological interventions As more people live to an age where they are dependent on others the book also considers the stresses on carers and how carers can be supported Lastly other aspects of mental health problems in old age are addressed including depression PTSD and personality disorder This collection of intriguing and inspiring papers will live up the shelves of students researchers and academics in the field as well as being a very useful resource for research teaching and study

**The Clinical Psychology of Aging** Martha Storandt, Ilene C. Siegler, Merrill F. Elias, 2012-10-20 It has been estimated that there are at least 2 500 000 adults 10% of the population above age 65 who are currently in need of some sort of mental health services Kramer Taube and Redick 1973 Other estimates are even higher e g Pfeiffer 1977 It is expected that this number will increase as the number of older adults increases over the next 40 years Probably less than 400 clinical psychologists are now providing services to this age group The number of elderly patients actually seen by these psychologists is very very small One national survey found that of 353 psychologists who reported that they had older clients only 495 individuals were seen for psychological testing and 1423 for psychotherapy in the one month just prior to the response Dye in press Assuming that the same individuals were not seen for both testing and therapy within the one month period a questionable assumption approximately 08% of the at least two and one half million older adults in need of psychological services are now being supplied with these services in some form or another Thus the need for increased involvement of clinical psychology with the aged is undeniable However few resources currently exist which will serve to increase the number of clinical psychologists trained to meet this need Probably less than 100 clinical psychologists living today have received any kind of formal graduate training in the clinical psychology of the aging Storandt 1977
