Goodman, Dante Cicchetti, 2008 Few questions in psychology have generated as much debate as those concerning the impact of childhood trauma on memory A lack of scientific research to constrain theory has helped fuel arguments about whether childhood trauma leads to deficits that result in conditions such as false memory or lost memory and whether neurohormonal changes that are correlated with childhood trauma can be associated with changes in memory Scientists have also struggled with more theoretical concerns such as how to conceptualize and measure distress and other negative emotions in terms of for example discrete emotions physiological response and observer ratings To answer these questions Mark L Howe Gail Goodman and Dante Cicchetti have brought together the most current and innovative neurobiological cognitive clinical and legal research on stress and memory development This research examines the effects of early stressful and traumatic experiences on the development of memory in childhood and elucidates how early trauma is related to other measures of cognitive and clinical functioning in childhood It also goes beyond childhood to both explore the long term impact of stressful and traumatic experiences on the entire course of normal memory development and determine the longevity of trauma memories that are formed early in life Stress Trauma and Children's Memory Development will be a valuable resource for anyone interested in early experience childhood trauma and memory research **The Wiley Handbook on The Cognitive Neuroscience of Memory** Donna Rose Addis, Morgan Barense, Audrey Duarte, 2015-06-02 The Wiley Handbook on the Cognitive Neuroscience of Memory presents a comprehensive overview of the latest cutting edge neuroscience research being done relating to the study of human memory and cognition Features the analysis of original data using cutting edge methods in cognitive neuroscience research Presents a conceptually accessible discussion of human memory research Includes contributions from authors that represent a who's who of human memory neuroscientists from the U S and abroad Supplemented with a variety of excellent and accessible diagrams to enhance comprehension **The Handbook of Memory Disorders** Alan D. Baddeley, Michael D. Kopelman, Barbara A. Wilson, 2003-04-11 The eagerly awaited 2nd edition of this classic handbook is a critical thorough account of memory disorders relating to neurological processes and to developmental and acquired brain damage and presents comprehensive sections on theory assessment treatment and management of memory disorders Written by a truly international team of experts this completely updated edition offers an authoritative review of the key areas of research and development in this field Completely updated and expanded New sections and chapters reflect many of the biggest growth areas in the field in recent years such as confabulation false memory and the frontal lobes Written by an international team of experts **Superior Memory** Elizabeth Valentine, John Wilding, 2013-06-20 This book examines the nature and causal antecedents of superior memory performance The main theme is that such performance may depend on either specific memory techniques or natural superiority in the efficiency of one or

more memory processes Chapter 2 surveys current views about the structure of memory and discusses whether common processes can be identified which might underlie general variation in memory ability or whether distinct memory subsystems exist the efficiency of which varies independently of each other Chapter 3 provides a comprehensive survey of existing evidence on superior memory performance It examines techniques which underlie many examples of unusual memory performance and concludes that not all this evidence is explicable in terms of such techniques Relations between memory ability and other cognitive processes are also discussed The remainder of the book describes the authors own studies of a dozen memory experts employing a wide variety of short and long term memory tasks These studies provide a much larger body of data than previously available from studies of single individuals usually restricted to a narrow range of tasks and rarely involving any systematic study of long term retention The authors argue that in some cases unusual memory ability is not dependent on the use of special techniques They develop some objective criteria for distinguishing between subjects who demonstrate natural superiority and those strategists who depend on techniques Natural superiority was characterised by superior performance on a wider range of tasks and better long term retention The existence of a general memory ability was further supported by a factor analysis of data from all subjects omitting those who described highly practised techniques This analysis also demonstrated the independence of initial encoding and retention processes The monograph raises many interesting questions concerning the existence and nature of individual differences in memory ability a previously neglected topic their relation to other cognitive processes and implications for theories concerning the structure of memory

Biology of Memory Karl Pribram, 2012-12-02 *Biology of Memory* investigates the biological basis of memory and covers topics ranging from short and long term post perceptual memory to memory storage processes memory microstructures chemical transfer and neuronal plasticity The activity of neuronal networks in the thalamus of the monkey is also examined along with integrative functions of the thalamocortical visual system of the cat Comprised of 20 chapters this book begins with an overview of the mechanisms that inhibit or interfere with short and long term memory followed by a discussion on different retrieval mechanisms for short and long term memory The reader is then introduced to the role of short and long term memory in the formation retention and utilization of associations together with the link between memory and the medial temporal regions of the brain Subsequent chapters focus on anatomical and chemical changes in the brain during primary learning cellular models of learning and cellular mechanisms of plasticity in *Aplysia* trace phenomena in single neurons of hippocampus and mammillary bodies and plasticity in single units in the mammalian brain The book concludes with a description of Occam Omnium Gatherum Core Content Addressable Memory a computer program for a content addressable memory in the central nervous system This monograph will be useful to biologists behavioral psychologists neuropsychologists neurophysiologists biophysicists and biochemists as well as computer scientists and mathematicians

Handbook of the Psychology of Aging James E. Birren, K Warner Schaie, 2011-04-27 *The Handbook of the Psychology of*

Aging 6e provides a comprehensive summary and evaluation of recent research on the psychological aspects of aging. The 22 chapters are organized into four divisions: Concepts, Theories and Methods in the Psychology of Aging, Biological and Social Influences on Aging, Behavioral Processes and Aging, and Complex Behavioral Concepts and Processes in Aging. The 6th edition of the Handbook is considerably changed from the previous edition. Half of the chapters are on new topics and the remaining half are on returning subjects that are entirely new presentations by different authors of new material. Some of the exciting new topics include Contributions of Cognitive Neuroscience to Understanding Behavior and Aging, Everyday Problem Solving and Decision Making, Autobiographical Memory and Religion and Health Late in Life. The Handbook will be of use to researchers and professional practitioners working with the aged. It is also suitable for use as a textbook for graduate and advanced undergraduate courses on the psychology of aging. The Handbook of the Psychology of Aging, Sixth Edition is part of the Handbooks on Aging series including Handbook of the Biology of Aging and Handbook of Aging and the Social Sciences, also in their 6th editions.

Handbook of Clinical Geropsychology Michel Hersen, Vincent B. Van Hasselt, 2013-11-22

Over the last two decades the number of persons over 65 has increased by 65%. Handbook of Clinical Geropsychology focuses attention on how the contributions of clinical psychology address the problems faced by this enormous population. In the first part, chapters cover a historical perspective, clinical geropsychology and U.S. federal policy, psychodynamic issues and other key topics. Part II details assessment and treatment for a wide range of disorders affecting the elderly. Part III considers such special issues as family caregiving, minority issues, physical activity and elder abuse and neglect.

Cognitive Rehabilitation in Old Age Robert D. Hill, Lars Bäckman, Anna Stigsdotter Neely, 2000

Cognitive deficits are part of the normal aging process and are exacerbated by various diseases that affect adults in old age such as dementia, depression and stroke. A significant scientific and social effort has been expended to evaluate whether cognitive deficits can be remedied through systematic interventions. The editors as well as the chapter authors represent a variety of viewpoints that span theory as well as practice. Overall, they aim to address concepts in cognitive rehabilitation that are useful in intervention research, research which examines problems and issues in normal and pathological aging and focusing on the application of cognitive training strategies in natural settings. Thus, the book is grounded in contemporary theory in cognitive aging and is applicable to both the practicing clinician as well as the researcher. It is organized into four sections. The first highlights prominent theoretical principles, the second looks at cognitive rehabilitation strategies in normal aging, the third examines the interplay between lifestyle patterns and cognitive function through applying a broad definition of lifestyle choices and the fourth focuses on rehabilitation strategies that address issues in pathological or diseased aging.
