the main characteristics of the intensity of perceived affect hypothesis The next two chapters detail empirical studies that provide evidence of the role of intensity of perceived affect in selective memory The last chapter of the text talks about the integrative framework that explains the diverse findings stemming from contemporary work and provides a guide to upcoming experimental research in the area of affect and selective memory The book will be of great interest to researchers and practitioners of psychology psychiatry and neurology

Naturalistic Epistemology A. Shimony, Debra Nails, 2012-12-06 1 AIMS OF THE INTRODUCTION The systematic assessment of claims to knowledge is the central task of epistemology According to naturalistic epistemologists this task cannot be well performed unless proper attention is paid to the place of the knowing subject in nature All philosophers who can appropriately be called naturalistic epistemologists subscribe to two theses a human beings including their cognitive faculties are entities in nature interacting with other entities studied by the natural sciences and b the results of natural scientific investigations of human beings particularly of biology and empirical psychology are relevant and probably crucial to the epistemological enterprise Naturalistic epistemologists differ in their explications of theses a and b and also in their conceptions of the proper admixture of other components needed for an adequate treatment of human knowledge e.g. linguistic analysis logic decision theory and theory of value Those contributors to this volume who consider themselves to be naturalistic epistemologists the majority differ greatly in these respects It is not my intention in this introduction to give a taxonomy of naturalistic epistemologies I intend only to provide an overview which will stimulate a critical reading of the articles in the body of this volume by facilitating a recognition of the authors assumptions emphases and omissions

Human Memory Michael W. Eysenck, 1977 **Image and Mind** Stephen Michael Kosslyn, 1980 Are images an important means of recalling information from memory and solving problems Or are images just display lights on the mind's computer In *Image and Mind* Stephen Kosslyn makes an impressive case for the view that images are critically involved in the life of the mind In a series of ingenious experiments he provides hard evidence that people can construct elaborate mental images search them for specific information and perform such other internal operations as mental rotation Kosslyn demonstrates that these results are best explained by a two-tiered model in which images are stored in abstract form in long-term memory and then assembled for internal display in much the way that images on a TV screen can be created from files in a computer memory Kosslyn shows how this model can be used to solve many of the persistent questions which have traditionally plagued theories of imagery that attempted to install imagery as the exclusive medium of mental representation Unlike any other work on imagery *Image and Mind* provides an integrated account of most of the modern empirical results from imagery research within the framework of a coherent theory The book also introduces a host of new experimental techniques and major hypotheses to guide future research The result is a landmark book and a major event in the study of the mind

Perception of Space and Motion William Epstein, Sheena Rogers, 1995-09-15 During the past 25 years the field of space and motion perception has rapidly advanced Once thought to

be distinct perceptual modes space and motion are now thought to be closely linked Perception of Space and Motion provides a comprehensive review of perception and vision research literature including new developments in the use of sound and touch in perceiving space and motion Other topics include the perception of structure from motion spatial layout and information obtained in static and dynamic stimulation Spatial layout Structure from motion Information on static and dynamic stimulation visual acoustic and haptic
