Ptolemy Tetrabiblos Loeb Classical Library 435:

Ptolemy in Perspective Alexander Jones, 2009-12-10 Ptolemy was the most important physical scientist of the Roman Empire and for a millennium and a half his writings on astronomy astrology and geography were models for imitation resources for new work and targets of criticism Ptolemy in Perspective traces reactions to Ptolemy from his own times to ours The nine studies show the complex processes by which an ancient scientist and his work gained and subsequently lost an overreaching reputation and authority In the Path of the Moon Francesca Rochberg, 2010 In the Path of the Moon offers a collection of essays concerning Babylonian celestial divination It investigates various aspects of cuneiform celestial omens horoscopes and astronomy and their wide ranging influences on later Hellenistic science and philosophy

Sounding the Bookshelf 1501 Tim Shephard, Oliver Doyle, Ciara O'Flaherty, Annabelle Page, Laura Ștefănescu, 2025-08-06 Sounding the Bookshelf 1501 explores how everyday texts in Renaissance Italy engaged with music sound and hearing Of the 358 known editions printed in 1501 only a few contained formal music notation or specialist theory Yet a surprising wealth of musical knowledge emerges from religious texts classical commentaries lifestyle guides poetry and more These sources rarely penned by professional musicians reflect the broader cultural presence of music in early 16th century life touching on themes like music's moral influence its role in education and its scientific understanding Drawing from an ambitious cross disciplinary survey this groundbreaking study repositions everyday references to music as vital to understanding Renaissance musical culture It challenges scholars to look beyond elite and theoretical traditions and instead engage with the rich often overlooked world of non specialist musical discourse Set against the backdrop of 1501 a landmark year when Ottaviano Petrucci revolutionized music printing this book offers a compelling snapshot of how music was understood and discussed by ordinary readers in Renaissance Italy By sounding out these diverse voices the project reimagines the contours of music history and opens new avenues for musicological inquiry *A Scheme of Heaven* Alexander Boxer, 2020-01-14 An illuminating look at the surprising history and science of astrology civilization's first system of algorithms from Babylon to the present day Humans are pattern matching creatures and astrology is the universe's grandest pattern matching game In this refreshing work of history and analysis data scientist Alexander Boxer examines classical texts on astrology to expose its underlying scientific and mathematical framework Astrology he argues was the ancient world's most ambitious applied mathematics problem a monumental data analysis enterprise sustained by some of history's most brilliant minds from Ptolemy to al Kindi to Kepler Thousands of years ago astrologers became the first to stumble upon the powerful storytelling possibilities inherent in numerical data To correlate the configurations of the cosmos with our day to day lives astrologers relied upon a scheme of heaven or horoscope showing the precise configuration of the planets at a particular instant in time as viewed from a particular place on Earth Although recognized as pseudoscience today horoscopes were once considered a cutting edge scientific tool Boxer teaches us how to read these esoteric charts and

appreciate the complex astronomical calculations needed to generate them by diagramming how the heavens appeared at important moments in astrology's history from the assassination of Julius Caesar as viewed from Rome to the Apollo 11 lunar landing as seen from the surface of the Moon. He then puts these horoscopes to the test using modern data sets and statistical science, arguing that today's data scientists do work similar to astrologers of yore. By looking back at the algorithms of ancient astrology, he suggests we can better recognize the patterns that are timeless characteristics of our own pattern matching tendencies. At once critical, rigorous, and far ranging, *A Scheme of Heaven* recontextualizes astrology as a vast technological project spanning continents and centuries that foreshadowed our data driven world today. Heaven and Earth United, 2018-07-23. Historically, the idea that the stars and planets influence the Earth and its inhabitants has proved powerful in almost every culture, offering an important context for the use of mathematical and astronomical instruments. In the past, however, historians of astronomy have paid relatively little attention to astrology and other non scientific topics, while historians of astrology have tended to concentrate on the analysis of texts rather than surviving artefacts. Scientific instruments, in particular, *Heaven and Earth United* is an attempt to redress the balance through an exploration of the astrological contexts in which instruments once found a place. Contributors are Silke Ackermann, Marisa Addomine, Jim Bennett, Marvin Bolt, Louise E Devoy, Richard Dunn, Seb Falk, Stephen Johnston, Richard L Kremer, G nther Oestmann, Josefina Rodriguez Arribas, Petra G Schmidl, Giorgio Strano, and Sylvia Sumira. **Translating Writings of Early Scholars in the Ancient Near East, Egypt, Greece and Rome**. Annette Imhausen, Tanja Pommerening, 2016-11-21. Ancient cultures have left written evidence of a variety of scientific texts. But how can they be translated? Is it possible to use modern concepts and terminology in their translation, and which consequences result from this practice? Scholars of various disciplines discuss the practice of translating ancient scientific texts and present examples of these texts and their translations. *Crucifixion in the Mediterranean World*. John Granger Cook, 2018-12-10. John Granger Cook traces the use of the penalty by the Romans until its probable abolition by Constantine. Rabbinic and legal sources are not neglected. The material contributes to the understanding of the crucifixion of Jesus and has implications for the theologies of the cross in the New Testament. Images and photographs are included in this volume. Early Music History: Volume 21. Iain Fenlon, 2002-11-21. *Early Music History* is devoted to the study of music from the early Middle Ages to the end of the seventeenth century and includes manuscript studies, textual criticism, iconography, studies of the relationship between words and music, and the relationship between music and society. Articles in volume 21 include Aaron's interpretation of Isidore and an illustrated copy of the Toscanello *Musica mundana*. Aristotelian natural philosophy and Ptolemaic astronomy. Davis,J. V. Field,T. J. Mahoney,2024-11-19 This volume provides a wide ranging introduction to Kepler s work with essays on his religion his cosmological theories his work in astronomy astrology optics and mathematics and his interactions with Tycho Brahe and Galileo Galilei Kepler is a major figure in the history of science His laws of planetary motion overthrew a tradition going back as far as the ancient Greeks of constructing the paths of planets by combinations of circles and the derivation of the laws was revolutionary in the way it relied upon detailed agreement with observations Moreover the laws explicitly relate the motion and path of each planet to the Sun Thus when the tables that Kepler based upon the laws proved to be highly reliable over many decades this played a crucial part in making heliocentrism acceptable And many years after Kepler s death the laws themselves played an important part in Newton s derivation of the inverse square law of gravitation in his Principia 1687 In this respect Kepler can look modern But his work is grounded in his religious belief that the Universe is the visible expression of the nature of the God who created it This book whose chapters are written by leading scholars is primarily addressed to undergraduate and graduate students of science and the history of science but will also appeal to the general reader with an interest in the history of science **A Cultural History of Race**

in the Middle Ages Thomas Hahn, 2023-06-01 This volume presents a comprehensive and collaborative survey of how people individually and within collective entities thought about experienced and enacted racializing differences Addressing events texts and images from the 5th to the 16th centuries these essays by ten eminent scholars provide broad multi disciplinary analyses of materials whose origins range from the British Isles Western Iberia and North Africa across Western and Eastern Europe to the Middle East These diverse communities possessed no single word equivalent to modern race a term raza for genetic religious cultural or territorial difference that emerges only at the end of the medieval period Chapter by chapter this volume nonetheless demonstrates the manifold beliefs practices institutions and images that conveyed and enforced difference for the benefit of particular groups and to the detriment of others Addressing the varying historiographical self consciousness concerning race among medievalist scholars themselves the separate analyses make use of paradigms drawn from social and political history religious environmental literary ethnic and gender studies the history of art and of science and critical race theory Chapters identify the eruption of racial discourses aroused by political or religious polemic centered upon conversion within and among Jewish Christian and Islamic communions and inspired by imagined or sustained contact with alien peoples Authors draw their evidence from Hebrew Latin Arabic and a profusion of European vernaculars and provide searching examinations of visual artefacts ranging from religious service books to maps mosaics and manuscript illuminations

African Biblical Studies Andrew M. Mbuvi, 2022-09-22 Andrew M Mbuvi makes the case for African biblical studies as a vibrant and important emerging distinct discipline while also using its postcolonial optic to critique biblical studies for its continued underlying racially and imperialistically motivated tendencies Mbuvi argues that the emergence of biblical studies as a discipline in the West coincides with and benefits from the establishment of the colonial project that included African colonization At the heart of the colonial project was the Bible not only as ferried by missionaries who often espoused racialized views to convert heathens in the distant lands but as the text used in the racialized justification of the colonial violence Interpretive approaches established within these racist and colonialist matrices continue to dominate the discipline perpetuating racialized interpretive methodology and frameworks On these grounds Mbuvi makes the case that the continued marginalization of non western approaches is a reflection of the continuing colonialist structure and presuppositions in the discipline of biblical studies *African Biblical Studies* not only exposes and critiques these persistent oppressive and subjugating tendencies but showcases how African postcolonial methodologies and studies that prioritize readings from the perspective of the marginalized and oppressed offer an alternative framework for the discipline These readings while destabilizing and undermining the predominantly white Euro American approaches and their ingrained prejudices and problematizing the biblical text itself posit the need for biblical interpretation that is anti colonial and anti racist

The Astronomical Clock of Strasbourg Cathedral Günther Oestmann, 2020-04-20 Strasbourg Cathedral s astronomical clock is one of the most famous monuments to Time in the world No other clock has been described and

appreciated so often and in such a myriad of ways There were three clocks built consecutively within the cathedral the earlier fourteenth century clock has left little trace a second clock was realized in 1570 1574 while the nineteenth century clock began as a proposal for repairs but was intended by its maker as a replacement clock This book gives a detailed outline of the artistic and technical components of the second clock much of which survives and it describes the astronomical indications and its underlying conceptual framework The author has discovered a hitherto disregarded contemporary statement that the clock displays four ways of determining the ascendant as described by Ptolemy He also shows that the Strasbourg clock is the result of a highly original reception of the architectural theory of Vitruvius and other mathematical and mechanical texts of Late Antiquity Revised and updated translation from the German edition Die Straßburger Münsteruhr Funktion und Bedeutung eines Kosmos Modells des 16. Jahrhunderts Published by GNT Verlag in 1993 See inside this book
