Radiation Protection Quantities for External Exposure, 1981 **Applied Physics of External Radiation**

Exposure Rodolphe Antoni, Laurent Bourgois, 2016-12-22 This book describes the interaction of living matter with photons neutrons charged particles electrons and ions The authors are specialists in the field of radiation protection The book synthesizes many years of experiments with external radiation exposure in the fields of dosimetry and radiation shielding in medical industrial and research fields It presents the basic physical concepts including dosimetry and offers a number of tools to be used by students engineers and technicians to assess the radiological risk and the means to avoid them by calculating the appropriate shields The theory of radiation interaction in matter is presented together with empirical formulas and abacus Numerous numerical applications are treated to illustrate the different topics The state of the art in radiation protection and dosimetry is presented in detail especially in the field of simulation codes for external exposure to radiation medical projects and advanced research Moreover important data spread in different up to date references are presented in this book The book deals also with accelerators X rays facilities sealed sources dosimetry Monte Carlo simulation and radiation regulation Each chapter is split in two parts depending on the level of details the readers want to focus on The first part accessible to a large public provides a lot of simple examples to help understanding the physics concepts under radiation external exposure The second part called Additional Information is not mandatory it aims on explaining topics more deeply often using mathematical formulations The book treats fundamental radiometric and dosimetric quantities to describe the interaction in materials under the aspects of absorbed dose processes in tissues Definitions and applications on limited and operational radiation protection quantities are given An important aspect are practical engineering tools in industrial medical and research domains Source characterization and shielding design are addressed Also more exotic topics such as ultra intense laser and new generation accelerators are treated The state of the art is presented to help the reader to work with the book in a self consistent way The basic knowledge necessary to apply Monte Carlo methods in the field of radiation protection and dosimetry for external radiation exposure is provided Coverage of topics such as variance reduction pseudo random number generation and statistic estimators make the book useful even to experienced Monte Carlo practitioners Solved problems help the reader to understand the Monte Carlo process The book is meant to be used by researchers engineers and medical physicist It is also valuable to technicians and students *Radiation Protection Quantities for External Exposure*, 1981 *Radiation Protection in Nuclear Medicine* Sören Mattsson, Christoph Hoeschen, 2012-09-14 This book explains clearly and in detail all aspects of radiation protection in nuclear medicine including measurement quantities and units detectors and dosimeters and radiation biology Discussion of radiation doses to patients and to embryos fetuses and children forms a central part of the book Phantom models biokinetic models calculations and software solutions are all considered and a further chapter is devoted to quality assurance and reference levels Occupational

exposure also receives detailed attention Exposure resulting from the production labeling and injection of radiopharmaceuticals and from contact with patients is discussed and shielding calculations are explained The book closes by considering exposure of the public and summarizing the rules of thumb for radiation protection in nuclear medicine This is an ideal textbook for students and a ready source of useful information for nuclear medicine specialists and medical physics experts

Radiation Protection Quantities for External Exposure, 1985 **The Million Person Study of Low-Dose Radiation Health Effects** John D. Boice Jr, André Bouville, Lawrence T. Dauer, Ashley P. Golden, Richard Wakeford, 2024-11-25 This book presents original research findings of The Million Person Study of Low Dose Radiation Health Effects MPS the largest and most comprehensive epidemiologic study of its kind to investigate the health effects of low level chronic radiation exposure on American workers and veterans throughout the 20th century Since the early 1900s epidemiologists have studied the consequences of radiation exposures yet the health effects of low levels received gradually over time remain unresolved This uncertainty comes at a time when the public and workers are experiencing ever increasing levels of radiation exposure from advances in medical radiation imaging techniques e g CT scans frequent flying at high

altitudes and environmental and occupational exposures The MPS is providing answers by studying 30 radiation exposed U S populations including workers at nuclear power plants radiologists workers at former Manhattan Project sites nuclear submariners nuclear weapons test participants atomic veterans industrial radiographers and radium dial painters Ongoing for more than 20 years and coordinated by the National Council on Radiation Protection and Measurements Vanderbilt University Medical Center and Memorial Sloan Kettering Cancer Center the MPS is a national effort supported by the Department of Energy National Aeronautics and Space Administration U S Navy Defense Threat Reduction Agency Nuclear Regulatory Commission Centers for Disease Control and Prevention and the Environmental Protection Agency Unparalleled in scope and quality the MPS provides an understanding of low dose health effects that is desperately needed for decision makers and the radiation protection community as society continues to increase the uses of radiation technologies Individual chapters were originally published in the International Journal of Radiation Biology *Neutron Dosimetry in Radiation Protection* H. Ing,1985 **Remediation Measures for Radioactively Contaminated Areas** Dharmendra K. Gupta,Anna Voronina,2018-06-04 This book offers extensive and comprehensive knowledge to the researchers and academicians who are working on decontamination of radioactively contaminated areas Remediation strategies for contaminated sites are provided Readers who will find this book useful include professionals specializing in radioecology safe disposal of radioactive waste as well as decontamination remediation legacies and impact of radioactive waste material on the environment The chapters give a broad overview and reviews of a number of original publications on remediation strategies that were explored after the Chernobyl and Fukushima Nuclear Power plant accidents Useful case studies are provided that explore the latest technological developments and future trends for affected area decontamination *Ionizing and Non-ionizing Radiation* Adelaja Osibote,2020-01-15 This book provides readers with comprehensive details on the management and measures to protect health against risks to people and environments generated by the use of ionizing and non ionizing radiation This book is divided into three sections namely Radiation Protection and Measurement Radiation Therapy and Radioactivity The first section covers ionizing radiation protection population exposure to non ionizing density and the system of dosimetry quantities for use in emergency preparedness and response to nuclear or radiological accidents The second section covers various planning techniques for spinal stereotactic body radiotherapy and the application of radiation technology in the development of a malaria vaccine The third section discusses environmental radioactivity monitoring using efficient measurements and the assessment of radiation exposure to humans Also in this section is the evaluation of the effects of chronic radiation exposure on the testes of mice after a nuclear power plant accident *Publications of the National Institute of Standards and Technology ...
