Ekers, 2023-01-10 This open access book is a biography of Joseph L Pawsey It examines not only his life but the birth and growth of the field of radio astronomy and the state of science itself in twentieth century Australia The book explains how an isolated continent with limited resources grew to be one of the leaders in the study of radio astronomy and the design of instruments to do so Pawsey made a name for himself in the international astronomy community within a decade after WWII and coined the term radio astronomy His most valuable talent was his ability to recruit and support bright young scientists who became the technical and methodological innovators of the era building new telescopes from the Mills Cross and Chris Christiansen Cross to the Parkes radio telescope The development of aperture synthesis and the controversy surrounding the cosmological interpretation of the first major survey which resulted in the Sydney research group s disagreements with Nobel laureate Martin Ryle play major roles in this story This book also shows the connections among prominent astronomers like Oort Minkowski Baade Struve famous scientists in the UK such as J A Ratcliffe Edward Appleton and Henry Tizard and the engineers and physicists in Australia who helped develop the field of radio astronomy Pawsey was appointed the second Director of the National Radio Astronomy Observatory Green Bank West Virginia in October 1961 he died in Sydney at the age of 54 in late November 1962 Upper level students scientists and historians of astronomy and technology will find the information much of it from primary sources relevant to any study of Joseph L Pawsey or radio astronomy This open access book includes a Foreword by Woodruff T Sullivan II *Reprints - National Radio Astronomy Observatory, Green Bank, W. The New Cosmos. A. Unsöld, 2013-11-09 This book may serve to present the modern view of the universe to a large number of readers whose over full professional commitments leave them no time for the study of larger monographs Such a book should not be too compendious Accordingly the author has been at pains to allow the leading ideas of the various domains of astronomical investigation to stand out plainly in their scientific and historical settings the introductory chapters of the three parts of the book in the framework of historical surveys should assist the general review With that in mind the title was chosen following Alexander von Humboldt's well known book *Kosmos Entwurf einer physischen Weltbeschreibung* 1827 1859 On the other hand particular results which admittedly first lend colour to the picture are often simply stated without attempting any thorough justification The reader seeking further information will find guidance in the Bibliography This makes no pretensions to completeness or historical balance References in the text or in captions for the figures by quoting authors and years make it possible for the reader to trace the relevant publications through the standard abstracting journals I wish to thank my colleagues V WEIDEMANN E RICHTER and B BASCHEK for their critical reading of the book and for much helpful counsel and H HOLWEGGER for his tireless collaboration with the proofs Similarly my thanks are due to Miss ANTJE WAGNER for the careful preparation of the typescript
