Fornel, Pierre-Noël Favennec, 2013-02-04 The scientific and technical basis underpinning modern measurement techniques used for electromagnetic quantities and phenomena is necessarily wide ranging as the electromagnetic environment spans all possible frequencies and wavelengths. Measurements must be applicable in fields as varied as nanotechnologies, telecommunications, meteorology, geo location, radio astronomy, health, biology and many others. In order to adequately cover the many different facets of the topic, this book provides examples from the entire range of the electromagnetic spectrum covering frequencies from several hertz to terahertz and considering wavelength distances ranging from nanometers to light years in optics. It then provides coverage of the various measurement techniques using electromagnetic waves for various applications, devoting chapters to each different field of application. This comprehensive book gives detailed information on the various techniques and methods available to measure the key characteristics of electromagnetic waves in terms of the local field and phase for a broad field of frequencies, determination of physical quantities such as distance, time, etc. using electromagnetic properties, new approaches to measurements in the field of electromagnetic distribution in complex structures, media such as biological tissues and in the nanosciences.

Radio Wave Propagation John A. Richards, 2008-01-22 This work treats the essential elements of radio wave propagation without requiring recourse to advanced electromagnetic concepts and equations. However, it provides sufficient detail to allow those concerned with wireless systems to acquire quickly a practical working knowledge of the important concepts. Radio wave propagation is placed in a practical context by considering the design aspects of communications systems at microwave frequencies. A fuller consideration of the electromagnetic properties of materials is given late in the book rather than as an introductory chapter.

Three-Dimensional Television H.M. Ozaktas, Levent Onural, 2007-11-13 Advances in optical technology and computing power are bringing life-like 3DTV closer with potential applications not only in entertainment but also in education, scientific research, industry, medicine and many other areas. 3DTV will require the integration of a diversity of key technologies from computing to graphics, imaging to display and signal processing to communications. The scope of this book reflects this diversity; different chapters deal with different stages of an end-to-end 3DTV system such as capture, representation, coding, transmission and display. Both autostereoscopic techniques which eliminate the need for special glasses and allow viewer movement and holographic approaches which have the potential to provide the truest three-dimensional images are covered. Some chapters discuss current research trends in 3DTV technology while others address underlying topics. This book is essential to those with an interest in 3DTV-related research or applications and also of interest to those who, while not directly working on 3DTV, work in areas which developments in 3DTV may touch such as multimedia, computer games, virtual reality, medical imaging and scientific simulation.

Algorithmic Information Theory Peter Seibt, 2007-02-15 Shall we be destined to the days of eternity on holy days as well as working days to be shewing the RELICKS OF LEARNING as monks do the relicks of their saints without working one single miracle with them? Laurence Sterne. *Tristram Shandy*. This book

deals with information processing so it is far from being a book on information theory which would be built on description and estimation The reader will be shown the horse but not the saddle At any rate at the very beginning there was a series of lectures on Information theory through the looking glass of an algebraist and as years went on a steady process of teaching and learning made the material evolve into the present form There still remains an algebraic main theme algorithms intertwining polynomial algebra and matrix algebra in the shelter of signal theory A solid knowledge of elementary arithmetic and Linear Algebra will be the key to a thorough understanding of all the algorithms working in the various bit stream landscapes we shall encounter This priority of algebra will be the thesis that we shall defend More concretely We shall treat in the chapters of increasing difficulty sensible different subjects in Discrete Mathematics The first two chapters on data compaction lossless data compression and cryptography are on an undergraduate level the most difficult mathematical prerequisite will be a sound understanding of quotient rings especially of finite fields mostly in characteristic 2

Acoustic MIMO Signal Processing Yiteng Huang, Jacob Benesty, Jingdong Chen, 2006-11-22 Telecommunication systems and human machine interfaces have begun using multiple microphones and loudspeakers to render interaction more lifelike and more efficient This raises acoustic signal processing problems under multiple input multiple output MIMO scenarios encompassing distant speech acquisition sound source localization and tracking echo and noise control source separation and speech dereverberation and many others The book opens with an acoustic MIMO paradigm establishing fundamentals and linking acoustic MIMO signal processing with classical signal processing and communication theories The second part of the book presents a novel analysis of acoustic applications carried out in the paradigm to reinforce the fundamentals of acoustic MIMO signal processing Voice and Speech Quality Perception Ute Jekosch, 2005-12-16

Foundations of Voice and Speech Quality Perception starts out with the fundamental question of How do listeners perceive voice and speech quality and how can these processes be modeled Any quantitative answers require measurements This is natural for physical quantities but harder to imagine for perceptual measurands This book approaches the problem by actually identifying major perceptual dimensions of voice and speech quality perception defining units wherever possible and offering paradigms to position these dimensions into a structural skeleton of perceptual speech and voice quality The emphasis is placed on voice and speech quality assessment of systems in artificial scenarios Many scientific fields are involved This book bridges the gap between two quite diverse fields engineering and humanities and establishes the new research area of Voice and Speech Quality Perception **Mobile Entity Localization and Tracking in GPS-less**
