Radioimmunoassay Of Biologically Active Compounds:

Radioimmunoassay of Biologically Active Compounds Charles Ward Parker, 1976 **Toxins and Biologically Active Compounds from Microalgae, Volume 2** Gian Paolo Rossini, 2014-04-24 Toxins and Biologically Active Compounds from Microalgae Volume 2 Biological Effects and Risk Management is devoted to the effects toxic microalgae and their poisonous products exert on living systems and how they may affect human activities The most advanced information regarding the molecular mechanisms of action of major groups of Immunochemistry Vanoss, 1994-08-24 This work offers comprehensive coverage of the chemical and physicochemical aspects of immunological interactions as well as the molecules and moieties involved in these interactions It covers in detail the Ag Ab interaction including attraction at a distance between epitope and paratope College or university bookstores may order five or more copies at a special student price available upon request

Handbook of Diagnostic Endocrinology Janet E. Hall, Lynnette K. Nieman, 2003-01-22 Experienced physicians concisely explain the pathophysiology and clinical manifestations of endocrine disorders and survey all the latest laboratory diagnostics Topics range widely from an overview of the diagnosis of diabetes and the long term monitoring of its complications to the evaluation of menstrual dysfunction Coverage is also given to the diagnosis of pituitary tumors Cushing's syndrome thyroid disease and hypoglycemia the evaluation of endocrine induced hypertension the assessment of dyslipidemia and obesity and approaches to diagnosing hyper and hypocalcemia There are also discussions of osteoporosis hypogonadism and erectile dysfunction and hyperandrogenism in women The authors each review the complex physiological basis of the relevant endocrine processes and provide richly instructive recommendations for followup and long term management of patients

Immunological Techniques in Insect Biology Lawrence I. Gilbert, Thomas A. Miller, 2012-12-06 Insects as a group occupy a middle ground in the biosphere between bacteria and viruses at one extreme amphibians and mammals at the other The size and general nature of insects present special problems to the study of entomology For example many commercially available instruments are geared to measure in grams while the forces commonly encountered in studying insects are in the milligram range Therefore techniques developed in the study of insects or in those fields concerned with the control of insect pests are often unique Methods for measuring things are common to all sciences Advances some times depend more on how something was done than on what was measured indeed a given field often progresses from one technique to another as new methods are discovered developed and modified Just as often some of these techniques find their way into the classroom when the problems involved have been sufficiently ironed out to permit students to master the manipulations in a few laboratory periods Many specialized techniques are confined to one specific research laboratory Although methods may be considered commonplace where they are used in another context even the simplest procedures may save considerable time It is the purpose of this series 1 to report new developments in methodology 2 to reveal sources of groups who have dealt with and solved particular entomological problems and 3 to describe experiments which may be applicable for use in

biology laboratory courses Radioimmunoassay in Basic and Clinical Pharmacology Carlo Patrono, Bernhard A. Peskar, 2012-12-06 Thirty years have elapsed since the first description by S A BERTSON and R S YALOW of the basic principles of radioimmunoassay RIA During this period of time RIA methodology has been instrumental to the growth of many areas of biomedical research including endocrinology oncology hematology and pharmacology It has done so by providing a relatively simple universal tool allowing for the first time the detection of endogenous mediators that are present in body fluids at concentrations as low as 10^{-10} M The fundamental nature of this discovery and the wide ranging fall out of basic and clinical knowledge derived from its application have been acknowledged by the many honors tributed to its pioneers including the Nobel Prize awarded to Dr YALOW 10 years ago Although several excellent books have been published during the past decades covering various aspects of RIA methodology we felt the need as pharmacologists for a comprehensive discussion of the methodological and conceptual issues related to the main classes of mediators of drug action and to drugs themselves Thus we gladly accepted the challenge provided by the invitation to edit a volume of the Handbook of Experimental Pharmacology on Radioimmunoassay in Basic and Clinical Pharmacology We tried to balance the emphasis placed on more general aspects of the RIA methodology and that on specific mediators Enzyme Immunoassay Edward T. Maggio, 2018-01-18 The purpose of this book is to focus attention on some of these ideas and concepts In doing so it has captured a glimpse of the past and it attempts a projection of the future but mostly it reveals an overview of the field as it exists at the present time It aims to serve to spawn further growth in ideas and encourage applications to increasingly broader segments of both clinical and general analytical chemistry fields Molecular Immunology M. Z. Atassi, Carel J. Van Oss, Darryl R. Absolom, 1984-02-22 Molecular Immunology fills an important gap in the literature providing the long needed up to date comprehensive textbook in this field In chapters by 43 leading experts this wide ranging volume presents a thorough understanding of the fundamentals and the topics at the forefront of molecular immunology studies invaluable to graduate level molecular immunology and immunochemistry students Throughout Molecular Immunology attention to the specific needs of students is emphasized This special textbook aids the learning process with such helpful features as informative chapter introductions numerous reference citations and convenient author and subject indexes all in a lucid readable style With its authoritative coverage its presentation designed for students and its contemporary focus Molecular Immunology offers the best possible choice for graduate level courses in this demanding discipline This unique text provides the requisite basis for a research career in this fast developing field Book jacket **Modern Fluorescence Spectroscopy** E. L. Wehry, 2012-12-06 Since the appearance of the first two volumes of Modern Fluorescence Spectroscopy in 1976 important advances continue to be made in both the techniques and applications of molecular luminescence In terms of hardware it is only recently that the application of laser excitation to molecular fluorometry has become feasible under conditions that are analytically realistic The improvements that can be effected in sensitivity analytical selectivity and ability

to handle difficult samples by laser fluorometry have only begun to be exploited Likewise time resolved fluorometry has received widespread use in fundamental studies a sizable number of which deal with biological systems but has as of yet received relatively little analytical utilization The use of electronic array detectors offers the promise of obtaining luminescence spectra more rapidly and perhaps ultimately with greater sensitivity than is possible by the use of scanning instruments equipped with conventional detectors The increasing capabilities of microcomputers and the increasing sophistication of smart spectroscopic instrumentation signify that much more efficient acquisition and use can now be achieved of the information contained in the excitation emission matrix inherent in the luminescence phenomenon

Biologically Active Molecules Urs P. Schlunegger, 2012-12-06 Over the past few years there has been a remarkable and rapid development of modern analytical methods and the fields of nuclear magnetic resonance and mass spectrometry have been no exception In addition to being able to do more and faster new innovative techniques have also arisen to contribute to a growing understanding of the relationship between chemical structure and biological activity In order to explore a few of the more interesting points of those developments and applications a seminar From Biological Activity to Structure was organized from September 5-7 1988 at Interlaken The four invited speakers Richard M Caprioli Howard R Morris Wolfgang Steglich and Dudley H Williams were kind enough to attend and discuss many facets of their research especially methodological and technical developments and their applications to specific problems Participants were introduced to continuous flow FAB fast atom bombardment and its use for example in the real time monitoring of biochemical reactions in vitro and in vivo the structural elucidation of secondary metabolites from fungi the analysis of molecule receptor interactions the determination of posttranslational modifications of peptides and the location of S-S bridges in determining the tertiary structure of proteins

Pharmacology And Pharmacotherapeutics (New Revised 21 St Ed.) R. S. Satoskar, S. D. Bhandarkar & Nirmala N. Rege, 1988

Cardiac Glycosides Kurt Greeff, 2012-12-06 Following the monographs by STRAUB 1924 and LENDLE 1935 this is the third contribution to the Pharmacology of Cardiac Glycosides within the Handbook of Experimental Pharmacology which was founded by ARTHUR HEFFTER and continued by WOLFGANG HEUBNER Because of the need created by the length of time that had elapsed since LENDLE'S work the editorial board requested the rapid appearance of this 56th volume which represents current knowledge of the pharmacology and clinical pharmacology of cardiac glycosides In order to avoid any delay numerous authors were invited to contribute because shorter contributions take less time to prepare and are consequently more up to date The disadvantage is that some overlap between certain chapters could not be avoided despite the editor's efforts Overlapping can however actually be useful in that differing opinions may be provided and topical issues discussed from varying viewpoints This reminds the reader that scientific horizons in medicine should often be widened or revised I would like to thank DR ALANNA Fox and DR K. ANANTHARAMAN for their help and advice in the revision of certain chapters I am also grateful to Springer Verlag and particularly to MR WINSTANLEY and MR

EMERSON for their contribution to the completion of this volume through translation and corrections In conclusion I would like to thank MRS WALKER MR BISCHOFF MRS SEEKER and MR BERGSTEDT of Springer Verlag for their helpful support

understanding of the text For the third edition Professor Michael Trimble has been joined by Professor Mark George as co author These are two of the world s leading biological psychiatrists who both have considerable clinical as well as research experience which they have brought to the book Unlike multiauthored texts it has a continuity running through it which aids understanding and prevents repetition This book is strongly recommended for all practising psychiatrists and trainees wishing for an up to date authoritative easy to digest and accessible review of the latest advances and conceptualizations in the field It will also appeal to neurologists interested in neuropsychiatry and biological psychiatry or the psychiatric aspects of neurological disorders as well as other practising clinicians psychologists social workers nurses in the mental health field
