Russians In Space:

Russia in Space Anatoly Zak, 2013-01-01 This is a unique attempt to visualise space exploration's future through the eyes of Russian space engineers and to describe that nation's plans in space. Based on actual documents rather than on guesswork, it is the first comprehensive illustrated book dedicated to the Russian vision for the future of manned spaceflight from the dawn of manned spaceflight until today. Lavishly illustrated with images of unparalleled artistic quality and technical accuracy, the book puts the development of the Russian manned spacecraft into political and historical context. Uniquely describes the future of space exploration through the eyes of Russian space engineers and planners, introduces hitherto unrevealed systems developed for the Russian space program, describes past events and future plans in the historical context of the fall and rise of the Russian space program.

Star-Crossed Orbits: Inside The U.S.-Russian Space Alliance

James Oberg, 2001-11-07 An insider's view into the U.S.-Russian space program. In *Star-Crossed Orbits*, space veteran and bestselling author James Oberg combines riveting personal memoir with top-notch investigative journalism to tell the complete untold story of the U.S.-Russian space alliance. With unparalleled access to official Russian archives, facilities, and key individuals associated with the Russian space program, he describes the strengths and weaknesses that each side of the alliance brings to the table. And he reveals for the first time the full story of Russia's decaying space program and how it ultimately was saved from collapse by Western funds. Praise for *Star-Crossed Orbits*: A unique background and base of experience underlies this remarkable book by Jim Oberg. It is a must reading for anyone who wishes to understand the culture with which one must deal when attempting to cooperate with Russia or counter its initiatives, whether peaceful or otherwise. Times change with the clock. Dr. H. H. Jack Schmitt, Apollo moon walker, US Senator. Jim Oberg's new book is an absolute must read for those who have followed the first decades of the human exploration of space. He reveals all sorts of insider information on all sides of the relationship between the U.S. and the Soviet Union, later Russia, as they attempted to forge a successful partnership in space. Don't miss this one. Admiral Richard Truly, Space Shuttle Astronaut and former NASA Administrator. *Star-Crossed Orbits* is a great piece of investigative journalism. Its detailed, comprehensive, and well-documented description of the political environment that shaped the International Space Station is a service to NASA and the nation. This book is a must read for program managers, engineers, and scientists engaged in present and future projects with Russia. Gene Kranz, Apollo Flight Director, author of *Failure is Not an Option*. Finally, someone is telling it like it is about the Russian manned space program: the good, the bad, and the ugly. The Russians pulled the wool over our eyes for decades. It continues even today; only now America is paying for it. I have relied on Jim for years because no one knows it or tells it like he does. Walter Cunningham, Apollo VII Astronaut, first manned Apollo mission. In this reasoned indictment, James Oberg reveals the self-delusional and cynically deceptive deals in which the US allowed Russia to be a controlling partner in constructing the International Space Station. He details the terrible cost in time, national treasure, and integrity that this

caused and how despite these self-inflicted barriers America's much maligned space workers successfully built it anyway

The Rebirth of the Russian Space Program Brian Harvey, 2007-05-10 This fifty years after Sputnik is the definitive book on the Russian space program The author covers all the key elements of the current Russian space program including both manned and unmanned missions He examines the various types of unmanned applications programs as well as the crucial military program and even analyzes the infrastructure of production launch centres and tracking You'll also find discussion of the commercialization of the program and its relationship with western companies Russia's current space experiment is also put in a comparative global context Strong emphasis is placed on Russia's future space intentions and on new programs and missions in prospect

The Rebirth of the Russian Space Program Brian Harvey, 2007-11-25 The rebirth of the Russian space program marks an important event 50 years since the first Sputnik was launched on 4th October 1957 At that time few could have imagined the dramatic events that lay ahead The Soviet Union achieved all the great firsts in cosmonautics the first satellite in orbit the first animal in orbit the first laboratory in orbit the first probe to the Moon the first probe to photograph its far side the first soft landing on the moon the first man in space the first woman in space the first spacewalk Except one the first human landing on the Moon In 1964 the Soviet Union decided to contest the decision of the United States to put the first person on the Moon The Soviet Union engaged in that race far too late with divided organization and made a gallant but doomed challenge to Apollo Undaunted the Soviet Union rebuilt its space program around orbiting stations building the first one Salyut and then the first permanent home in space Mir The Soviet Union still achieved many more firsts the first lunar rover the first soft landing on Venus the first soft landing on Mars the first recovery of samples from the Moon by automatic spacecraft

Russia in Space Brian Harvey, 2000-12-21 Until the Apollo Soyuz flight of 1972 the Russian Space Program was shrouded in such complete secrecy that only rumors of failures or catastrophes reached the West This comprehensive history of the Russian Space Program from its Sputnik origins to the privatized Mir Space Station addresses the technical political historical human and organizational issues and provides a balanced focus on the manned and unmanned programs It is the first book to assess the Russian Space Program including the 10 year period since the fall of communism

Russia's Posture in Space Marco Aliberti, Ksenia Lisitsyna, 2018-06-13 The book sheds new lights on the evolution of Russian space activities with a focus on their strategy of international cooperation This analysis is carried out in relation to the evolution of the domestic and international dynamics that have been impacting the country's direction in space with the ultimate goal of providing an assessment on their impact for current and foreseeable Europe Russia space relations Russia has traditionally been one of the two main strategic partners for Europe in its space endeavor Hitherto long standing cooperation has been nurtured between the two actors in various areas from scientific research to space transportation and human spaceflight In recent years however a number of endogenous and exogenous developments has triggered significant changes in Russia's

space posture These changes are evident in the adjustment of Russia's space policies and programmatic goals in the restructuring of the domestic space industry as well as in the attitude towards international space partnerships

The New Russian Space Programme Brian Harvey (M.A.),1996 *Soviet Russia's Space Program During the Space Race* Charles River Editors,2015-12-14 Includes pictures Profiles the various space missions the Soviets conducted during the 1950s and 1960s Includes footnotes online resources and a bibliography for further reading Includes a table of contents This is Moscow This is Moscow calling On the 12th of April the Soviet Union orbited a spaceship around the Earth with a man on board The astronaut is a Soviet citizen Major Gagarin Yuri Alekseyevich The World's first cosmonaut The first to open the door into the unknown The first to step over the threshold of our homeland The whole planet knew him and loved him Of all the goals the Bolshevik Revolution aimed to bring about perhaps nowhere were Russian promises delivered on more than in the success of the Soviet Space program of the 1950s and 1960s As a result of Russian innovation and technology but also due to incredible drive to modernize and compete with the United States for world power Russia was finally and triumphantly modernized in the eyes of her own people and the world Neil deGrasse Tyson recognized the Soviet legacy in space in his Space Chronicles citing the Soviets important measure s of space achievement first spacewalk longest spacewalk first woman in space first docking in space first space station longest time logged in space In fact the Soviet Union spent much of the 1950s leaving the United States in its dust and rocket fuel President Eisenhower and other Americans who could view Soviet rockets in the sky were justifiably worried that Soviet satellites in orbit could soon be spying on them or even worse dropping nuclear bombs on them Dovetailing off their success developing intercontinental ballistic missiles the Soviets were the first to make enormous advances in actual space exploration and on the night of October 4 1957 the Soviets prepared to launch Object D atop one of its R 7 rockets As the world's first ICBMs R 7 rockets were built primarily to carry nuclear warheads but Object D was a far different payload Object D and the R 7 rocket launched from a hastily constructed launch pad and within minutes it entered orbit It took that object now more famously known as Sputnik 1 about 90 minutes to complete its orbit around the Earth speeding along at 18 000 miles per hour while transmitting a distinct beeping noise by radio Eventually the Space Race produced some of the most iconic moments of the 20th century including the landing of the first men on the Moon and today the race is widely viewed poignantly and fondly as a race to the Moon that culminated with Apollo 11 winning the race for the United States In fact it encompassed a much broader range of competition between the Soviet Union and the United States that affected everything from military technology to successfully launching satellites that could land on Mars or orbit other planets in the Solar System Moreover the notion that America won the Space Race at the end of the 1960s overlooks just how competitive the Space Race actually was in launching people into orbit as well as the major contributions the Space Race influenced in leading to today's International Space Station and continued space exploration Soviet Russia's Space Program During the Space Race The History and Legacy of the Competition that Pushed America to the Moon chronicles the history of

Russia's space development and the competition it fostered. Along with pictures of important people, places, and events, you will learn about the Russian space program like never before in no time at all. **The Russian Space Program** Terry C Treadwell, 2026-01-30. This is not the definitive work on the Russian space program, but it will give the reader an insight into a political and complex world of space science. Although the success of the high profile American space program had grabbed all the headlines, Russia slowly but consistently has continued to expand their contribution to the exploration of space. Since the phasing out of the Space Shuttle, it is the Russians that now have the main responsibility to replace the crewmembers and take supplies to the space station, although now the American SpaceX program has eased that burden. The book covers the early triumphs and disasters of the Russian space program and the animals that helped pave the way, although the casualties never came to light until many years later when the understanding and tensions between the East and West eased. Despite the number of setbacks that dogged the early years, Russia slowly developed spacecraft that, although considered by some to be very basic, were reliable. The development of the Salyut and Mir space stations created a closer understanding between the nations; the work and experiments carried out by the cosmonauts in these early space stations were almost all military and were either secret or restricted, so little is known about them. However, with the arrival of the International Space Station, came a degree of openness and great strides were made in the understanding of the physiological and psychological effects of the men and women involved in working in space and a weightless environment. Unfortunately, since the war in Ukraine, Russia's relationship with the West has deteriorated considerably, and co-operation within the space program is very limited, although the two main powers have reached an agreement regarding the transportation of crews and supplies to the ISS. It is thought, however, that the International Space Station days are numbered and will close in 2031. The book also makes reference to only a small number of Kosmos missions; those mentioned are the only ones with any connection to space exploration. The remainder, and there have been over 2,500 Kosmos missions, were either military or scientific satellites.

The New Race for Space James E. Oberg, 1984. Describes and compares the space programs of the U.S. and U.S.S.R.
