Shaped Crystal Growth V.A. Tatarchenko,1993-08-31 The monograph Shaped Crystal Growth by V A Tatarchenko is the first systematic of the macroscopic crystallization theory The theory is based on the stable state growth conception which means that self stabilization is present in the system with growth parameter deviations occurring under the action of external perturbations attenuating with time The crystallization rate is one of the parameters responsible for crystal defect formation Steady state crystal growth means that crystallization rate internal stabilization is present thus allowing more perfect crystals to grow Most important is the fact that the crystal shape an easily observed parameter is one of the stable growth characteristics when growing crystals without any contact with the crucible walls This means that constant cross section crystal growth is to a certain extent evidence of crystallization process stability The principles of the stable crystal growth theory were developed by the author of the monograph in the early 1970s Due to the efforts over the past 20 years of V A Tatarchenko his disciples V A Borodin S K Brantov E A Brenner G I Romanova G A Satunkin et al and his followers B L Timan O V Kolotiy et al the theory has been completed which is demonstrated by this monograph The characteristic feature of the theory is its trend towards solving practical problems that occur in the process of crystal growth

Springer Handbook of Crystal Growth Govindhan Dhanaraj, Kullaiah Byrappa, Vishwanath Prasad, Michael Dudley, 2010-10-20
Over the years many successful attempts have been made to describe the art and science of crystal growth such as Czochralski, Kyropoulos, Bridgman and many review articles, monographs, symposiums and focus specially on recent advances in the field and handbooks have been published to present improving these methodologies such as application of comprehensive reviews of the advances made in this field. Magnetic field orientation of the growth axis introduced. These publications are testament to the production of a pedestal and shaped growth. They also show interest in both bulk and thin film crystals because they cover a wide range of materials from silicon and III V of their electronic, optical, mechanical, microstructural compounds to oxides and fluorides and other properties and their diverse scientific and technological applications. The third part, Part C of the book, focuses on technological applications. Indeed, most modern adhesion growth. The various aspects of hydrothermal processes in semiconductor and optical devices would be discussed in two chapters while three other not have been possible without the development of chapters present an overview of the nonlinear and laser, many elemental, binary, ternary and other compound crystals, KTP and KDP. The knowledge on the effect of crystals of varying properties and large sizes. The gravity on solution growth is presented through a literature devoted to basic understanding of growth comparison of growth on Earth versus in a microgravity environment, mechanisms, defect formation and growth processes environment. Bulk Crystal Growth of Electronic, Optical and Optoelectronic Materials Peter Capper, 2005-10-31
