Markets Famines:

The New Famines Stephen Devereux, 2006-11-22 The recent occurrences of famine in Ethiopia and Southern Africa have propelled this key issue back into the public arena for the first time since 1984 as once again it becomes a priority not only for lesser developed countries but also for the international community Exploring the paradox that is the persistence of famine in the contemporary world this book looks at the way the nature of famine is changing in the face of globalization and shifting geo political forces The book challenges perceived wisdom about the causes of famine and analyzes the worst cases of recent years including close analysis of food scarcity in North Korea Ethiopia Sudan and Malawi and less well known cases in Madagascar Iraq and Bosnia With fresh conceptual frameworks and analytical tools major theoretical constructs which have previously been applied to analyze famines such as the democracy ends famine argument Sen's entitlement approach and the complex political emergency framework are confronted This volume assembles an international team of contributors including Marcus Noland Alex de Waal and Dan Maxwell an impressive roster which helps make this book an important resource for those in the fields of development studies and political economics Markets and Famines Martin

Ravallion, 1987 This study of the economics of famine applies modern methods of economic investigation to show how the sharp increases in mortality observed during famines can arise without a decline in aggregate food availability **Theory of Markets** Bertrand M. Roehner, 2012-12-06 Book titles because they are compromises between concision and precision provide but an approximate description of real content For this book an alternative and more comprehensive title would be An investigation of spatial arbitrage as an introduction to the theory of commodity markets trade and space time patterns of price fluctuations In this title both the specificities and the limitations of our approach are emphasized Firstly our approach concentrates on the basic mechanisms of spatial arbitrage leaving aside a number of accessory facets of international trade such as the impact of quotas or of exchange rates Secondly for the sake of simplicity we restrict ourselves to single commodity markets the interrelationship of different goods on multi commodity markets are only occasionally mentioned The previous restrictions however drastic they may at first appear delimit and define what can be considered as the core of the process of trade and of spatial transactions Having thus simplified the object of our study we are able to tackle the problem in a systematic way and to model spatial differentials along with their relationships to the volume of trade both in equilibrium and in non equilibrium situations As far as the subtitle of the book is concerned we shall postpone the discussion of what is meant by the expression analytical economics until the concluding chapter **An Economic History of Famine**

Resilience Jessica Dijkman, Bas van Leeuwen, 2019-09-18 Food crises have always tested societies This volume discusses societal resilience to food crises examining the responses and strategies at the societal level that effectively helped individuals and groups to cope with drops in food supply in various parts of the world over the past two millennia Societal responses can be coordinated by the state the market or civil society Here it is shown that it was often a combined effort but

that there were significant variations between regions and periods The long term comparative perspective of the volume brings out these variations explains them and discusses their effects on societal resilience This book will be of interest to advanced students and researchers across economic history institutional economics social history and development studies

Mass Starvation Alex de Waal, 2017-12-08 The world almost conquered famine Until the 1980s this scourge killed ten million people every decade but by early 2000s mass starvation had all but disappeared Today famines are resurgent driven by war blockade hostility to humanitarian principles and a volatile global economy In Mass Starvation world renowned expert on humanitarian crisis and response Alex de Waal provides an authoritative history of modern famines their causes dimensions and why they ended He analyses starvation as a crime and breaks new ground in examining forced starvation as an instrument of genocide and war Refuting the enduring but erroneous view that attributes famine to overpopulation and natural disaster he shows how political decision or political failing is an essential element in every famine while the spread of democracy and human rights and the ending of wars were major factors in the near ending of this devastating phenomenon Hard hitting and deeply informed Mass Starvation explains why man made famine and the political decisions that could end it for good must once again become a top priority for the international community

Famine Cormac Ó Gráda, 2021-06-08 Famine remains one of the worst calamities that can befall a society Mass starvation whether it is inflicted by drought or engineered by misguided or genocidal economic policies devastates families weakens the social fabric and undermines political stability Cormac Gr da the acclaimed author who chronicled the tragic Irish famine in books like Black 47 and Beyond here traces the complete history of famine from the earliest records to today Combining powerful storytelling with the latest evidence from economics and history Gr da explores the causes and profound consequences of famine over the past five millennia from ancient Egypt to the killing fields of 1970s Cambodia from the Great Famine of fourteenth century Europe to the famine in Niger in 2005 He enriches our understanding of the most crucial and far reaching aspects of famine including the roles that population pressure public policy and human agency play in causing famine how food markets can mitigate famine or make it worse famine s long term demographic consequences and the successes and failures of globalized disaster relief Gr da demonstrates the central role famine has played in the economic and political histories of places as different as Ukraine under Stalin 1940s Bengal and Mao s China And he examines the prospects of a world free of famine This is the most comprehensive history of famine available and is required reading for anyone concerned with issues of economic development and world poverty

Famines in European Economic History Declan Curran, Lubomyr Luciuk, Andrew G. Newby, 2015-04-24 This volume explores economic social and political dimensions of three catastrophic famines which struck mid nineteenth and early twentieth century Europe the Irish Famine An Gorta M r of 1845 1850 the Finnish Famine Suuret N lk vuodet of the 1860s and the Ukrainian Famine Holodomor of 1932 1933 In addition to providing new insights into these events on international national and regional scales this volume contributes to an increased

comparative historiography in historical famine studies The parallel studies presented in this book challenge and enhance established understandings of famine tragedies including famine causation and culpability social and regional famine vulnerabilities core periphery relationships between nations and regions degrees of national autonomy and self sufficiency as well as famine memory and identity Famines in European Economic History advocates that the impact and long term consequences of famine for a nation should be understood in the context of evolving geopolitical relations that extend beyond its borders Furthermore regional structures within a nation can lead to unevenness in both the severity of the immediate famine crisis and the post famine recovery This book will be of interest to those in the fields of economic history European history and economic geography *Eating People Is Wrong, and Other Essays on Famine, Its Past, and Its Future* Cormac Ó Gráda, 2020-10-13 New perspectives on the history of famine and the possibility of a famine free world Famines are becoming smaller and rarer but optimism about the possibility of a famine free future must be tempered by the threat of global warming That is just one of the arguments that Cormac Gr da one of the world s leading authorities on the history and economics of famine develops in this wide ranging book which provides crucial new perspectives on key questions raised by famines around the globe between the seventeenth and twenty first centuries The book begins with a taboo topic Gr da argues that cannibalism while by no means a universal feature of famines and never responsible for more than a tiny proportion of famine deaths has probably been more common during very severe famines than previously thought The book goes on to offer new interpretations of two of the twentieth century s most notorious and controversial famines the Great Bengal Famine and the Chinese Great Leap Forward Famine Gr da questions the standard view of the Bengal Famine as a perfect example of market failure arguing instead that the primary cause was the unwillingness of colonial rulers to divert food from their war effort The book also addresses the role played by traders and speculators during famines more generally invoking evidence from famines in France Ireland Finland Malawi Niger and Somalia since the 1600s and overturning Adam Smith s claim that government attempts to solve food shortages always cause famines Thought provoking and important this is essential reading for historians economists demographers and anyone else who is interested in the history and possible future of famine *State and Market in the Chinese Economy* P. Nolan, 1993-04-27 The book provides a unique examination of the relationship between the state and market in China s economic development over several centuries Its analysis is situated in the wider context of debates about technical progress in the pre modern world about the impact of western imperialism about the role of the state in the economic development of poor countries and in the transition of former communist countries away from Stalinist systems of political economy **The Great Divergence Reconsidered** Roman Studer, 2015-01-29 Studer shows that institutional geographical political and technological factors account for Europe s rise to undisputed world economic leader
