Battle of the Dinosaur Bones Rebecca L. Johnson, 2012-08-01 In the 1880s science witnessed a major shift Charles Darwin proposed his theory of evolution People dug up the first dinosaur fossils And the field of paleontology the study of ancient plants and animals emerged Othniel Charles Marsh and Edward Drinker Cope became enthralled with these new ideas discoveries and developments Both were determined to become world famous paleontologists When they met in 1863 they started off as friends But within a few years competition drove the men apart Each fought bitterly to discover more fossils name more species and publish more papers than the other In their haste to outdo each other they both produced some shoddy work The resulting confusion took many years to discover and correct and their toxic relationship crippled the field of paleontology for decades afterward However the competition also produced a wealth of fossils These laid a firm foundation for the field of paleontology and supported Darwin's theory of evolution Marsh's and Cope's discoveries generated keen public interest in prehistoric life and rich data for future generations of paleontologists This book explores the great rivalry between Marsh and Cope showing how it brought out the best and the worst in them while bringing humankind a brand new view of life on Earth **Encyclopedia of Dinosaurs** Philip J.

Scaling Knut Schmidt-Nielsen, 1984-07-27 This book is about the importance of animal size We tend to think of animal function in chemical terms and talk of water salts proteins enzymes oxygen energy and so on We should not forget however that physical laws are equally important for they determine rates of diffusion and heat transfer transfer of force and momentum the strength of structures the dynamics of locomotion and other aspects of the functioning of animal bodies Physical laws provide possibilities and opportunities for an organism yet they also impose constraints setting limits to what is physically possible This book aims to give an understanding of these rules because of their profound implications when we deal with animals of widely different size and scale The reader will find that the book raises many questions Remarkable and puzzling information makes it read a little like a detective story but the last chapter instead of giving the final solution neither answers all questions nor provides one great unifying principle

Brinkman, 2024-05-31 The so called Bone Wars of the 1880s which pitted Edward Drinker Cope against Othniel Charles Marsh in a frenzy of fossil collection and discovery may have marked the introduction of dinosaurs to the American public but the second Jurassic dinosaur rush which took place around the turn of the twentieth century brought the prehistoric beasts back to life These later expeditions which involved new competitors hailing from leading natural history museums in New York Chicago and Pittsburgh yielded specimens that would be reconstructed into the colossal skeletons that thrill visitors today in museum halls across the country Reconsidering the fossil speculation the museum displays and the media frenzy that ushered dinosaurs into the American public consciousness Paul Brinkman takes us back to the birth of dinomania the modern obsession with all things Jurassic Featuring engaging and colorful personalities and motivations both altruistic and ignoble The Second Jurassic Dinosaur Rush shows that these later expeditions were just as foundational if not more so to the establishment of paleontology and the budding collections of museums than the more famous Cope and Marsh treks With adventure intrigue and rivalry this is science at its most swashbuckling **Paleoneurology 1804-1966 T.**

Edinger, 2012-12-06 Dr Tilly Edinger's first published paper dealt with a brain cast in more exact terms an endocast of the cranial cavity of Nothosaurus a Triassic relative of the plesiosaurs With this she embarked on a working lifetime of devotion to paleoneurology a field of study that she was to transform A daughter of the famous neurologist Ludwig Edinger it was appropriate as well as fortunate that her early interest in fossil vertebrates should have become focused upon the recovery of such information concerning the history of the central nervous system as could be obtained from fossil material Her father evidently had no direct influence upon her choice of this then obscure and difficult subject although within the family circle she presumably absorbed from him some appreciation of neuroscience Indirectly however through his accumulation in Frankfurt of an outstanding collection of recent brains he provided the comparative material essential to her studies during the years she spent there Early in her career she published *Die Fossilen Gehirne* 1929 Here was gathered together for the first time nearly all the widely scattered information on the topic It had an immediate effect As one author justly remarked this invaluable review serves not only as a basis for continuing and systematizing research on brain casts but also as an indication of the more serious gaps in present knowledge Simpson 1933 The bibliography appended to it listed 250 titles A bibliography she published in 1937 included 160 additional titles *Greenhouse of the Dinosaurs* Donald R.

Prothero, 2009-07-01 Donald R Prothero's science books combine leading research with first person narratives of discovery injecting warmth and familiarity into a profession that has much to offer nonspecialists Bringing his trademark style and wit to an increasingly relevant subject of concern Prothero links the climate changes that have occurred over the past 200 million years to their effects on plants and animals In particular he contrasts the extinctions that ended the Cretaceous

period which wiped out the dinosaurs with those of the later Eocene and Oligocene epochs Prothero begins with the greenhouse of the dinosaurs the global warming episode that dominated the Age of Dinosaurs and the early Age of Mammals He describes the remarkable creatures that once populated the earth and draws on his experiences collecting fossils in the Big Badlands of South Dakota to sketch their world Prothero then discusses the growth of the first Antarctic glaciers which marked the Eocene Oligocene transition and shares his own anecdotes of excavations and controversies among colleagues that have shaped our understanding of the contemporary and prehistoric world The volume concludes with observations about Nisqually Glacier and other locations that show how global warming is happening much quicker than previously predicted irrevocably changing the balance of the earth s thermostat Engaging scientists and general readers alike Greenhouse of the Dinosaurs connects events across thousands of millennia to make clear the human threat to natural climate change
